

Contents

1	Global Challenges in the Ecological and Energetic Development of Cities	1
1	Introduction	2
2	Resource Scarcity	2
2.1	The Faustian Pact	2
2.2	Boundless Growth	4
2.3	The Limits of Growth	5
2.4	Sustainable Development	6
2.5	The Ecological Footprint	8
2.6	The Anthropocene	9
2.7	The Path to a Resource-Fair City	9
3	Climate Changes	10
3.1	Human and Bird Traps	10
3.2	Did we humans cause climate change?	12
3.3	What is referred to as the greenhouse effect?	13
3.4	Are there other greenhouse gases besides carbon dioxide?	15
3.5	What does an increase in global temperatures mean?	16
3.6	Is the Gulf Stream also affected by climate change?	20
3.7	The Path to a Climate-Just City	25
4	Poverty, Migration, and Social Drift	27
4.1	Challenges and the Call for Wealth Distribution	27
4.2	“Social Drifting Apart” in German and European Cities	29
5	Summary and Outlook	31
	References	33
2	Fundamentals of Energetic-Ecological Urban Transformation	37
1	Introduction	38
2	Early Cities	39
2.1	Akhetaten—Sun City on the Nile	40
3	Greek and Roman Cities	41
3.1	Cambodunum as the southernmost Roman colonial city north of the Alps	44
4	Medieval and Early Modern Cities in Europe	47

4.1	Nuremberg as a Economically Strong Medieval Imperial City	51
4.2	“Timber shortage” in the 18th century	54
5	Cities at the Beginning of Industrialization	55
5.1	Munich: From “Cholera Nest” to Bavarian Cultural and Economic Metropolis	58
6	The Fossil City of the Industrial Age	59
6.1	Lighting	60
6.2	Communication in and between Cities	61
6.3	Cooling of Goods and Spaces	61
6.4	Motorization of Devices and Vehicles.	61
6.5	Environmental consequences of fossil energy use	63
6.6	Environmental policy in the fossil city	65
6.7	Rational Energy Use in the Hanseatic City of Hamburg.	66
7	The Importance of Digitization for Energy and Ecology in Urban Development	67
7.1	Internet of Things	68
7.2	Virtual Power Plants	68
7.3	Network development with increasingly decentralized power generation plants.	70
7.4	Load Control and Smart Metering.	72
7.5	Digital Energy Network of the Saarbrücken Municipal Utilities	74
8	The Post-Fossil City	75
8.1	The Post-Fossil City can only be a City Region	76
8.2	Example: Energy Transition in Heidelberg	78
	References.	80
3	Principles of Energetic-Ecological Urban Transformation.	83
1	Introduction	83
2	The Space Principle	84
3	The Principle of Prototypical Spaces	88
4	The <i>intra-muros</i> Principle.	90
5	The Principle of Energy Sectors and Energy Parties	94
6	The Principle of Ecological Cycles	95
7	The Principle of the Social City	97
8	Summary and Outlook	98
	References.	100
4	Building Blocks of Energetic-Ecological Urban Transformation.	103
1	Introduction	104
2	Historical Development Analysis	105
2.1	Looking into the Past.	105
2.2	Adaptation of the Infrastructure	109

3	Classification into Urban and Landscape Spaces	113
3.1	The Example of the International Building Exhibition IBA Hamburg	114
3.2	Further Characteristics of Prototypical Spaces	116
4	Development of Spatio-Temporal Scenarios	119
5	Population Data and Demographic Development	124
6	Recording and Forecasting of the Climate	127
7	Energy Demand and Energy Supply	130
7.1	Energy and Space	131
7.2	Accounting Principles	131
7.3	Grey Energy	132
7.4	Efficiency and Sufficiency	132
7.5	Heat Demand and Renewable Heat Supply	133
7.6	Electricity Demand and Renewable Electricity Supply	143
7.7	Fuel Demand	150
7.8	Material Flow Intensity and Area Relevance	151
8	Greenhouse Gas Emissions	152
9	Adjustment Levers of Development Alternatives	154
10	Summary and Outlook	162
	References	163
5	Methodology of Energetic-Ecological Urban Transformation	167
1	Introduction	168
2	Premises	168
3	The Energy Model	169
3.1	Guidelines and Assumptions	169
3.2	Division into Urban and Landscape Spaces	170
3.3	The Current and Future Energy Demand	171
3.4	The Current and Future Renewable Energy Yield	183
4	The Emission Model	191
4.1	Specifications and Assumptions	191
4.2	Division into Urban and Landscape Spaces	192
4.3	The Current and Future Emissions	192
5	Further Model Options	194
6	Summary and Outlook	195
	References	195
6	Fields of Action for Energetic-Ecological Urban Transformation . . .	199
1	Introduction	200
2	Nature in the City	201
2.1	Green Room	202
2.2	Roof, Wall and Facade Greening, Green Urban Furniture	204

2.3	Private Gardens, Community Gardens, Urban Gardening	207
2.4	Green Provision in Cities and Urban Quarters	216
2.5	Regional Green Belts and Urban Green Belts	218
2.6	Urban Greenery for Climate Change Adaptation	219
3	Preservation and Restoration of Cycles	222
3.1	Water Cycle	223
3.2	Product Cycles	227
4	Healthy Building	228
4.1	Health in the Use of Buildings	229
4.2	Effects of the Building Environment and Construction Methods	230
5	Design of Solar Energy Use	232
5.1	Integration of Solar Energy in the Heat Supply of Buildings	234
5.2	Integration of solar energy in the power supply of buildings, vehicles, and technical infrastructure	240
6	Energy Cultural Landscape	244
6.1	Cultural Landscape and Expansion of Renewable Energies as Spatial Planning Issues	245
6.2	Building Culture, Cultural Landscape, Sustainability	247
6.3	Renewable Energies and the Design of an Energy Cultural Landscape	249
6.4	Location-based Energy Landscapes	250
6.5	Elements of an Energy Cultural Landscape Using the Example of the City and District of Nordhausen	252
6.6	Energy paths as a motivating and guiding idea for the development of an energy cultural landscape	253
7	Traffic Development	254
7.1	Public Transport Accessibility in Rural Areas	255
7.2	Bicycle Friendliness	256
7.3	Car Sharing	256
7.4	Mobility Stations	257
7.5	Charging Infrastructure for Electric Vehicles	258
8	Energy Networks and Energy Storage	259
8.1	Cold District Heating—Open Heat Networks	260
8.2	Example Energy Network Wilhelmsburg-Mitte	261
9	Outlook	262
	References	263
7	Regulatory and Political Framework of Energetic-Ecological Urban Transformation	267
1	Introduction	268
2	Climate Protection Laws	269
2.1	Building Energy Act (GEG)	271

2.2	Renewable Energy Act (EEG)	273
2.3	Fuel Emission Trading Act	274
3	Climate Protection and Adaptation to Climate Change in Guiding Principles as well as Informal and Formal Regulations of Planning Law	274
3.1	Leipzig Charter for a Sustainable European City	274
3.2	Building Code and Spatial Planning Act of the Federal Republic of Germany	275
3.3	Informal Planning and Funding Policy	276
3.4	State Funding Program “progres.nrw” and Climate Protection Settlements in North Rhine-Westphalia	277
3.5	Recommendations for the Further Development of Regional and Municipal Plans in the Climate Design Plan City and County of Nordhausen	279
3.6	Planning Guidelines for Climate Change Adaptation According to VDI Guideline 3787	283
4	Solar, Energy-Efficient and Climate-Adapted Urban Planning	285
4.1	Solar Roofs	288
4.2	Blue-green Infrastructure	289
5	Housing Policy Framework Conditions of Energy Renovation	290
5.1	Warm Rent Neutrality	293
5.2	Rent Index with Consideration of Energy Building Standards	295
5.3	Promotion of Energy Retrofitting of Residential Buildings	296
6	Local Governance	297
6.1	Municipal Self-Government and Local Governance	298
6.2	Municipal Housing Policy and Ecological Urban Development	298
6.3	Municipal Utilities and Local Energy Networks	301
6.4	Municipal Levy Systems	303
6.5	Civic Organizations	306
7	International Networking	308
7.1	Climate Alliance	309
7.2	European Energy Award	310
7.3	Charter of Aalborg	311
8	Standards of Sustainability and CO ₂ Reduction	312
8.1	Energy Audits, Energy Management and EMAS Register	317
8.2	Sustainability Certifications for Buildings and Urban Quarters	318
