Part A: Molecular and Physiological Control and Limitations

1	Dynamics in Photosystem II Structure and Function	3
	A. Trebst	
1.1	Introduction	3
1.2	Function of Photosystem II	3
1.3	Structure of Photosystem II	6
1.4	Dynamics in the D1 Protein in Rapid Turnover and Stress-Enhanced Photoinhibition	11
1.5	Photoinhibition and Environmental Stress	13
1.6	Regulation of Photosystem II by Phosphorylation	14
1.7	Conclusions	14
	References	15
2	Regulation of Photosynthetic Light Energy Capture, Conversion, and Dissipation in Leaves of Higher Plants	17
	O. Björkman and B. Demmig-Adams	
2.1	Introduction	17
2.2	The Concept of Excess Photon Flux Density	18
2.3	Regulation of Light Interception	19
2.3.1	Changes in Leaf Orientation	19
2.3.2	Changes in Leaf Reflectance	23
2.3.3	Chloroplast Movements	24
2.3.4	Changes in Chlorophyll Content and Photosynthetic Capacity	25
2.4	Regulation of Energy Dissipation	26
2.4.1	Dissipation in Metabolic Processes	26
2.4.2	Efficiency of Photochemical Energy Conversion and Extent of Nonradiative Energy Dissipation	28
2.4.3	Nonradiative Energy Dissipation and the Xanthophyll Cycle	34
2.4.4	Mechanism of Nonradiative Dissipation	41
2.5	Conclusions	44
	References	44

3	Chlorophyll Fluorescence as a Nonintrusive Indicator for Rapid Assessment of In Vivo Photosynthesis	49
	U. Schreiber, W. Bilger, and C. Neubauer	
3.1	Introduction	49
3.2	Indicator Function of Chlorophyll Fluorescence	50
3.3	Rapid Fluorescence Induction Kinetics	51
3.4	Slow Fluorescence Induction Kinetics and Fluorescence Quenching Under Steady-State Conditions	54
3.5	The Saturation Pulse Method	55
3.6	Quantum Yield and Rate Determination by Fluorescence Measurements	56
3.7	Fluorescence as an Indicator of Nonassimilatory Electron Flow	58
3.8	In Situ Measurements of $\Delta F/F'_m$ and of Relative Electron Transport Rate	62
3.9	Yield Limitation and Excessive Photon Flux Density . .	64
3.10	Conclusions	66
	References	67
4	Higher Plant Respiration and Its Relationships to Photosynthesis	71
	J.S. Amthor	
4.1	Introduction	71
4.2	Pathways and Controls of Respiration	73
4.2.1	Unique Properties of Plant Respiration and Mitochondrial Metabolism	75
4.2.2	Control of Respiration Rate	76
4.2.3	Energy Conservation During Plant Respiration	77
4.2.4	Respiration Rate and Carbohydrate Level	79
4.3	Respiration in Photosynthesizing Leaves	80
4.4	Photorespiration and Mitochondrial Metabolism	84
4.4.1	Oxidation of Photorespiratory NADH by the Respiratory Chain	84
4.4.2	Oxidation of Photorespiratory NADH via Substrate Shuttles	85
4.5	Daytime Photosynthesis and Nighttime Respiration . . .	86
4.5.1	Light Level	87
4.5.2	CO ₂ Concentration	88
4.6	Photosynthesis and Root Respiration	89
4.7	Conclusions	90
	Appendix	91
	References	95

5	Apoplastic and Symplastic Proton Concentrations and Their Significance for Metabolism	103
	H. Pfan̈z	
5.1	Introduction	103
5.2	Definitions	104
5.2.1	The pH Concept	104
5.2.2	The Buffer Concept	104
5.2.3	Techniques to Determine Intra- and Intercellular pH ...	106
5.3	Cellular pH	107
5.3.1	The Apoplastic pH	107
5.3.2	The Symplastic pH	111
5.4	Conclusions	117
	References	118
6	The Significance of Assimilatory Starch for Growth in <i>Arabidopsis thaliana</i> Wild-Type and Starchless Mutants	123
	W. Schulze and E.-D. Schulze	
6.1	Introduction	123
6.2	The Metabolic Pathway of Assimilatory Starch Formation and the Use of Mutants to Circumvent Chloroplast Starch Formation	124
6.3	The Diurnal Starch Turnover	125
6.4	Significance of Leaf Starch for Growth	126
6.4.1	Effects of Leaf Starch on Biomass Formation	126
6.4.2	Effects of Leaf Starch on Regulation of Shoot/Root Ratios	128
6.5	The Carbon Balance	129
6.6	Conclusions	130
	References	131
7	Photosynthesis, Storage, and Allocation	133
	K. Fichtner, G. W. Koch, and H. A. Mooney	
7.1	Introduction	133
7.2	The Impact of Photosynthesis on Growth, Storage, and Biomass Allocation in Transgenic Tobacco	133
7.2.1	Photosynthesis and Growth	134
7.2.2	Photosynthesis and Biomass Allocation	135
7.2.3	Carbon and Nitrogen Storage in Relation to Photosynthesis	137
7.2.4	The Tobacco System: Conclusions	138
7.3	Allocation in Relation to Shoot and Root Activity	139
7.3.1	Resource, Growth, and Allocation	139
7.3.2	Photosynthesis, Specific Absorption Rate, and Allocation	139

7.3.3	The Radish System: Conclusions	142
7.4	Storage as Related to Resource Availability	142
7.5	Conclusions	143
	References	144
8	Gas Exchange and Growth	147
	J.S. Pereira	
8.1	Introduction	147
8.2	How Plants Grow	148
8.3	Photosynthesis and Growth Rates	150
8.4	The Importance of Allocation	153
8.5	Do Growth Rates Influence Carbon Assimilation?	155
8.6	Light Interception by Canopies and Plant Productivity	156
8.7	Phenology and Rates of Growth and Photosynthesis ..	159
8.8	Environmental Stresses Change the Relationship Between Photosynthesis and Growth	162
8.8.1	Water Deficits	163
8.8.2	Nitrogen Abundance	166
8.8.3	Temperature Effects	171
8.9	Conclusions	173
	Appendix: List of Symbols and Definitions	175
	References	175

Part B: Responses of Photosynthesis to Environmental Factors

9	Internal Coordination of Plant Responses to Drought and Evaporational Demand	185
	R. Lösch and E.-D. Schulze	
9.1	Introduction	185
9.2	Environmental and Plant-Internal Influences on Transpiration	185
9.3	Root-Leaf Signals Under Moisture Shortage Contribute to Drought Avoidance Responses of Leaves	187
9.4	Leaf Anatomy, Canopy Structure, and Stomatal Function	195
9.5	Xylem Conductivity and Leaf Conductance	197
9.6	Conclusions	199
	References	200
10	As to the Mode of Action of the Guard Cells in Dry Air	205
	I.R. Cowan	
10.1	Introduction	205

10.2	Two Seminal Experiments	206
10.3	Some Relevant Observations	208
10.3.1	On Stomatal Mechanics	208
10.3.2	Signals and Responses	211
10.3.3	Hydrology of the Epidermis	215
10.4	Hypothesis	217
10.4.1	Feedback	217
10.4.2	Of Bubbles and Balloons	219
10.4.3	Piers and Vaults	222
10.5	Conclusions	226
	References	227
11	Direct Observations of Stomatal Movements	231
	L. Kappen, G. Schultz, and R. Vanselow	
11.1	Introduction	231
11.2	The Methodical Approach	233
11.3	General Aspects	234
11.4	Stomatal Responses	235
11.4.1	Air-Humidity Response	235
11.4.2	Response to Changing CO ₂ Concentrations of the Air	238
11.4.3	Response to Heat	241
11.4.4	The Transient Phase and Other Peculiarities of the Stomatal Response	241
11.5	Conclusions	244
	References	245
12	Carbon Gain in Relation to Water Use: Photosynthesis in Mangroves	247
	M. C. Ball and J. B. Passioura	
12.1	Introduction	247
12.2	Water Relations: Why Be Conservative?	247
12.3	Implications of Conservative Water Use for Plant Function	251
12.4	Implications of Conservative Water Use for Display and Properties of Leaves	254
12.5	Coping with Excessive Light: Another By-Product of Conservative Water Use	255
12.6	Into the Future: Coping with Global Increase In Atmospheric CO ₂ Concentration	256
	References	257
13	Photosynthesis as a Tool for Indicating Temperature Stress Events	261
	W. Larcher	
13.1	Introduction	261

13.2	Development of Temperature Stress and Characteristic Responses of Photosynthesis	261
13.3	Use of Photosynthetic Responses for Determining Heat Tolerance	266
13.4	Photosynthetic Function as a Criterion for Screening Chilling Susceptibility	267
13.5	Assay and Analysis of Freezing Events by Monitoring Photosynthesis	269
13.6	Conclusions	273
