
Table of contents

1.Introduction	1
1.1. General remarks	1
1.2. Bio-macromolecules	3
1.2.1. Structure of proteins and peptides	3
1.2.2. Protein and peptide in nature	5
1.2.3. -D/-L cyclic peptides and self-assembly of the cyclic peptide nanotubes	7
1.2.4. Applications of cyclic peptide nanotubes	10
1.3. Polymer bio-conjugation	12
1.3.1. Convergent synthesis of peptide-polymer conjugates	13
1.3.2. Divergent synthesis of peptide-polymer conjugates	15
1.3.3. Peptide polymer bio-conjugates with helical conformational peptides	17
1.3.4. β -sheet based peptides for the design of polymer bio-conjugates	19
1.4. Synthesis and characterization of peptide polymer nanotubes: (PPNTs)	22
1.4.1. Synthesis of polymer coated peptide nanotubes	22
1.4.2. Influence of the polymer mass on the PPNT dimensions (dry-height and length)	25
2.Goals & Strategy	30
2.1. Goals	30
2.2. Strategy	32
2.2.1. Synthesis and characterization of poly (methyl methacrylate)-PPNTs	32
2.2.2. Control of the length/height relation of peptide polymer nanotubes	32
2.2.3. PEGylation of cyclic peptide-initiator towards solubility improvement	36
3.Methods	38
3.1. General remarks	38
3.1.1. Fundamentals of solid phase peptide synthesis (SPPS)	38
3.2. Atom transfer radical polymerization (ATRP)	44
3.2.1. Typical features and mechanism of ATRP	45
3.2.2. Rate of reaction, molar mass and polydispersity	47
3.2.3. Variables in ATRP	49
3.3. Atomic force microscopy (AFM)	52
4.Synthesis and characterization of poly (methyl methacrylate)coated cyclic peptide nanotubes	56
4.1. General remarks	56
4.2. Model atom transfer radical polymerization of methyl methacrylate	56
4.3. Synthesis and characterization of PMMA-PPNTs	62
4.3.1. <i>In-situ</i> MMA-ATRP from the surface of self-assembled cyclic peptide nanotubes	62
4.3.2. Structural characterization of PMMA-PPNTs	65
4.3.3. Model calculation of dry-height of PMMA-PPNTs and initiator-efficiency	72
4.4. Bottle brush model in solution: Scaling analysis	76

4.5.	Conclusions	81
5.	Synthesis and characterization of peptide polymer nanotubes with controlled grafting density	82
5.1.	General remarks	82
5.2.	Design of cyclic peptide nanotubes with a precise control over the grafting density	82
5.2.1.	Precursor of the mixed cyclic peptide nanotubes (MPNTs)	82
5.2.2.	Self assembly of the MPNTs	85
5.2.3.	Composition and structural analysis of MPNTs	88
5.3.	<i>In-situ</i> surface-initiated polymerization from the surface of MPNTs	96
5.3.1.	General procedure for the synthesis of PMMA-MPNTs	96
5.3.2.	Structural characterization of PMMA-MPNTs	98
5.4.	Conclusions	113
6.	<i>In-situ</i> cross-linking of the polymer shell of self-assembled cyclic peptide nanotubes	115
6.1.	General remarks	115
6.2.	<i>In-situ</i> surface-initiated polymerization from the surface of self-assembled cyclic peptide nanotubes (PNT- <i>ini</i>)	115
6.3.	Structural characterization of PEGDMA-PPNTs	117
6.3.1.	Chemical stability of PEGDMA-PPNTs	120
6.4.	Dry-height and length analysis of PEGDMA-PPNTs via AFM analysis	122
6.5.	Conclusions	126
7.	PEGylation of cyclic peptide-initiator	127
7.1.	General remarks	127
7.2.	Synthesis of PEGylated cyclic peptide-initiator	128
7.2.1.	Formation of the primary structure	128
7.2.2.	Cyclization of the linear peptide structure	130
7.2.3.	ATRP-initiator attachment and peptide-cleavage from the resin	131
7.3.	Structural characterization of PEGylated cyclic peptide-initiator	134
7.4.	Solubility of the PEGylated cyclic peptide-initiator	141
7.5.	Conclusions	143
8.	Summary	144
9.	Experimental	148
9.1.	Solvents and reagents	148
9.2.	Synthesis	150
9.2.1.	Synthesis of 2-bromo-N-butyl-2-methylpropanamide (model-initiator)	150
9.2.2.	Synthesis of (2-dimethylaminoethyl) amine (Me ₆ TREN)	150
9.2.3.	Synthesis of cyclic peptide initiator [Asp-(Ala-Lys- <i>ini</i>) ₃ -Ala]	151
9.2.4.	Synthesis of cyclic peptide blocked [Asp-(Ala-Lys.bloc) ₃ -Ala]	156
9.2.5.	Self assembly of mixed cyclic peptide nanotubes	157
9.3.	Polymerizations	158
9.3.1.	Chemical stability of PEGDMA-PPNTs	161

9.4.	PEGylation of cyclic peptide-initiator: [Gly-(PEG)-Asp-(Ala-Lys.ini) ₃ -Ala]	162
9.5.	Instrumentation	167
