

H.M. Staudenmaier (Ed.)

Physics Experiments Using PCs

A Guide for Instructors
and Students

With 162 Figures

Springer

Contents

Part I Mechanics

1. Fourier Analysis of Some Simple Periodic Signals	
By <i>R. Lincke</i> (With 17 Figures)	3
1.1 Apparatus	3
1.2 Programs	4
1.3 Experiments	5
1.3.1 Simple Harmonic Wave	5
1.3.2 Beats	6
1.3.3 Amplitude Modulation	9
1.3.4 Rectangles	12
1.4 Didactic and Pedagogical Aspects	14
References	16
Appendix 1.A	16
2. Point Mechanics by Experiments – Direct Access to Motion Data	
By <i>R. Dengler</i> and <i>K. Luchner</i> (With 20 Figures)	23
2.1 Introduction	23
2.2 ORVICO	24
2.2.1 Principle	24
2.2.2 Hardware	25
2.2.3 Software	28
2.3 Examples	29
2.3.1 Ballistic Motion	29
2.3.2 The Rigid Pendulum	31
2.3.3 Frame of Reference	33
2.3.4 Statistical Motion on an Air Table	34
2.3.5 Spheric Pendulum	35
2.3.6 Two Point Masses Observed	37
2.4 Conclusion	38
References	39

3. Application of PID Control to a Thermal Evaporation Source

By *B. D. Hall* (With 12 Figures) 43

3.1 Introduction 43

3.2 The System to be Controlled:

 An Inert-Gas-Aggregation Source 45

 3.2.1 Background 45

 3.2.2 The Inert-Gas-Aggregation Technique 45

 3.2.3 A Description

 of a Real Inert-Gas-Aggregation Source 47

3.3 Description of the PID Control Algorithm 49

 3.3.1 The PID Control Algorithm 54

3.4 Implementing the PID Algorithm on a Computer 54

 3.4.1 Program Structure and the Use of Interrupts 58

3.5 Adjusting the PID 59

 3.5.1 The Ziegler-Nichols' Methods 60

3.6 Possibilities Offered by the Léman Source 63

3.7 Conclusions 65

Acknowledgements 66

References 66

4. Computer Control of the Measurement of Thermal Conductivity

By *B. W. James* (With 17 Figures) 67

4.1 Thermal Conductivity 67

 4.1.1 Measurement of Thermal Conductivity

 with Parallel Heat Flow 68

 4.1.2 Measurement of Thermal Conductivity

 with Non-Parallel Heat Flow 70

4.2 Experimental Considerations 71

 4.2.1 The Thermocouple as a Temperature

 Measuring Device 72

 4.2.2. The AD595 Thermocouple Amplifier

 Integrated Circuit 73

 4.2.3 Thermocouple Accuracy 74

 4.2.4 Calibration of the Thermocouples 75

 4.2.5 Thermocouple Selection Multiplexing Circuit 75

 4.2.6 Multiplexor Control 76

 4.2.7 The IEEE-488 Bus Interface Unit 76

 4.2.8 The Control and Measurement Software 76

 4.2.9 Discussion of the Experiment 84

4.3 The Computer Simulation 85

References 86

Appendix 4.A 88

Appendix 4.B 99

5. Experiments with High-T_c Superconductivity	
By <i>M. Ottenberg</i> and <i>H. M. Staudenmaier</i> (With 4 Figures) ..	111
5.1 Experimental Setup	111
5.1.1 The Apparatus	111
5.1.2 Electronics	113
5.1.3 Computer, Interface and Software	114
5.2 Measurements	116
5.2.1 Resistance Measurement	116
5.2.2 Tunnel Diode Oscillator Measurement	118
5.3 Results	119
5.3.1 Detailed Analysis of the Resistance and TDO Measurements	119
5.3.2 Thermodynamic and Calorimetric Results	122
5.3.3 Experience Within the Laboratory Course	124
References	125
Appendix 5.A: Electric Circuit Diagrams	125
Appendix 5.B: Spline Fit Program SPLFIT	126
6. Computer Control of Low Temperature Specific Heat Measurement	
By <i>G. Keeler</i> (With 13 Figures)	129
6.1 Basic Physics	130
6.1.1 Specific Heat	130
6.1.2 Low Temperature Specific Heat	131
6.1.3 The Debye Model for the Specific Heat	133
6.1.4 Specific Heat Anomalies	134
6.2 Experimental Setup	134
6.2.1 Specimen	134
6.2.2 Apparatus	135
6.2.3 Electronics	136
6.2.4 Microcomputer Control	138
6.3 Measurements and Results	138
6.3.1 Measurement Principles	138
6.3.2 Using the Computer Program	142
6.3.3 Typical Results	146
6.4 Discussion	148
References	149
Appendix 6.A: Circuit Diagrams	150
Appendix 6.B: Program Listing	150

7. Computer-Controlled Observations of Surface Plasmon-Polaritons	
By <i>A. D. Boardman, A. M. Moghadam and J. L. Bingham</i>	
(With 14 Figures)	172
7.1 Introduction	172
7.2 A Computer-Controlled ATR Experiment	178
7.2.1 Prism Geometry	179
7.2.2 Computer Control of ATR Measurements	183
7.3 Comments on the Mechanics Design and the Computer Interface	187
7.4 Conclusion	191
References	191

Part IV Optics and Atomic Physics

8. Molecular Spectroscopy of I₂	
By <i>U. Diemer and H. J. Jodl</i> (With 8 Figures)	195
8.1 Introduction	195
8.2 Some Basic Physics of the Diatomic Molecule	196
8.3 Experimental Setup	200
8.3.1 The Classical Arrangement	200
8.3.2 Extensions: Online Use of a Computer	201
8.4 Measurements	204
8.4.1 Calibration of the System	204
8.4.2 Recording the Absorption Spectra	204
8.4.3 Recording the Fluorescence Spectra	206
8.4.4 Some Additional Features of the Program <i>LAmDA</i>	207
8.5 Analysis of the Spectra Using the Program <i>JOD</i>	208
8.5.1 Analysis of Absorption Spectra	208
8.5.2 Some Optional Exercises	214
8.6 Pedagogical Aspects	217
References	218
9. Optical Transfer Functions	
By <i>H. Pulvermacher</i> (With 14 Figures)	219
9.1 Introduction	219
9.2 Mathematical Tools	220
9.2.1 Fourier Transforms	220
9.2.2 Theory of Transfer Functions	221
9.2.3 Imaging with Space Invariant Systems	223
9.2.4 Coherent Optics	223
9.2.5 Incoherent Optics	225
9.2.6 Exercises and Questions	227

9.3	Experimental Set Up	227
9.3.1	Preliminary Considerations	227
9.3.2	The Optics	228
9.3.3	The Test Object	229
9.3.4	The Electronics	230
9.3.5	The Adjustment	231
9.3.6	The Software for Experimentation and Evaluation	233
9.4	Evaluation	237
9.4.1	The Tasks	237
9.4.2	The General Procedure of Evaluation	237
9.4.3	Influence of the Detector Slit	238
9.4.4	Pure Defect of Focus	238
9.4.5	Diffraction and Defect of Focus	239
9.4.6	Quasi-Coherent Illumination	240
9.5	Didactic and Pedagogical Aspects	243
9.5.1	Goals	243
9.5.2	Interpretation of Data	243
9.5.3	Presentation of Data	244
9.5.4	Complications and Limitations of the Model	244
9.5.5	Applications of Fourier Optics	245
	Appendix 9.A: Diffraction by a Sector Star	245
	References	247

Part V Nuclear Physics

10. Nuclear Spectrometry Using a PC Converted to a Multichannel Analyser

	By <i>J. S. Braunsfurth</i> (With 13 Figures)	251
10.1	Introduction	251
10.1.1	Hardware Concept	251
10.1.2	Target Group	252
10.1.3	MCA Design Alternatives	252
10.2	Basic Physics	254
10.2.1	Interaction of Electromagnetic Radiation with Matter	254
10.2.2	Absorption of Electromagnetic Radiation in Matter	255
10.2.3	Interaction of Particle Radiation with Matter	256
10.2.4	Bremsstrahlung	257
10.2.5	X-Ray Fluorescence	257
10.3	Detectors and Measuring Equipment	258
10.3.1	Scintillation Detectors for β and γ Spectrometry	258
10.3.2	Signal Recording Equipment; the Multichannel Analyser	259
10.3.3	Energy Resolution of a Detector	259
10.3.4	Radiation Detection Efficiency	260

10.4	Experimental Setup	261
10.4.1	Hardware Setup	261
10.4.2	General Structure of the MCA Program; Program Kernel	262
10.4.3	MCA Program Menus	265
10.5	Experiments	269
10.5.1	General Considerations	269
10.5.2	γ -Ray Absorption; Radiation Intensity Buildup by Compton Interaction	271
10.5.3	β Spectrum; Energy Loss of Electrons in Matter ..	276
10.6	Student Reactions	279
	References	281

11. Parity Violation in the Weak Interaction

	By <i>E. Kankeleit, H. Jäger, C. Müntz, M. D. Rhein,</i> and <i>P. Schwalbach</i> (With 7 Figures)	282
11.1	Introduction	282
11.2	Basic Physics	283
11.3	Experimental Setup	285
11.3.1	Electronics	286
11.3.2	Software	288
11.4	Measurements and Results	289
11.4.1	General Remarks	289
11.4.2	Energy Calibration	289
11.4.3	Background Measurement	289
11.4.4	Measurement of the γ Polarization	289
11.4.5	Results and Discussion	290
11.5	Didactic and Pedagogical Aspects	292
	References	292

12. Receiving and Interpreting Orbital Satellite Data.

	A Computer Experiment for Educational Purposes By <i>T. Kessler, S. M. Rüger</i> and <i>W.-D. Woitdt</i> (With 13 Figures) ..	293
12.1	Introduction	293
12.2	The UoSAT Satellites	294
12.3	The Receiving System	296
12.4	Discriminating Valid Data from Noise and Interference ..	297
12.5	The Real Time Data Acquisition System	299
12.6	Whole Orbit Data Analysis	303
12.7	Practical Experience and Further Aspects	307
	Acknowledgements (from the third author)	308
	References	308
