Preface	vii
Notation	xi
1 The origins of tauberian operators	1
1.1 Tauberian conditions in summability theory	1
1.2 Tauberian matrices	2
1.3 Tauberian operators	4
1.4 Notes and Remarks	6
2 Tauberian operators. Basic properties	9
2.1 Basic facts about tauberian operators	10
2.2 Main characterizations of tauberian operators	16
2.3 Preservation of the closedness of closed convex sets	21
2.4 Action of tauberian operators on basic sequences	25
2.5 Notes and Remarks	31
3 Duality and examples of tauberian operators	35
3.1 Cotauberian operators	36
The residuum operator	37
A counterexample	40
3.2 The DFJP factorization of operators	46
3.3 Variations of the DFJP factorization	52
An isometric variation of the DFJP factorization	53
Connections with real interpolation methods	54
A conditional variation of the DFJP factorization	56
3.4 Inclusions of vector-valued function spaces	59
3.5 Tauberian-like classes of operators defined in terms of sequences	61
3.6 Notes and Remarks	69

4	Tauberian operators on spaces of integrable functions	73
4.1	Tauberian operators on $L_1(\mu)$ spaces	74
4.2	Ultrapowers of tauberian operators on $L_1(\mu)$ spaces	79
4.3	The perturbation class of $\mathcal{T}(L_1(\mu), Y)$	82
	On the operators in $\mathcal{T}(L_1(\mu))$	86
4.4	Biconjugates of tauberian operators on $L_1(\mu)$	88
4.5	Notes and Remarks	90
5	Some applications	93
5.1	Equivalence of the Radon-Nikodým property and the Krein-Milman property	94
5.2	Preservation of isomorphic properties	98
	Properties of spaces preserved by tauberian operators	98
	Properties of bounded subsets preserved by tauberian operators	99
5.3	Operator ideals and factorization	100
5.4	Uniform factorization for compact sets of operators	104
5.5	Factorization of holomorphic mappings	109
	The surjective case	111
	The injective case	112
5.6	Approximation properties and Calkin algebras	113
5.7	Notes and Remarks	118
6	Tauberian-like classes of operators	121
6.1	Operator ideals and semigroups	122
6.2	Strongly tauberian operators	131
	Strongly tauberian operators on L -embedded spaces	136
6.3	Finite representability of operators	139
6.4	Ultrapower-stable classes of operators	157
6.5	Supertauberian operators	162
6.6	Cosupertauberian operators	173
	Local supportability versus local representability	182
6.7	Notes and Remarks	185
A	Basic concepts	191
A.1	Semi-Fredholm operators	191
A.2	Operator ideals	195
A.3	Bases and basic sequences	197
A.4	Ultraproducts in Banach space theory	200
A.5	Reflexivity and super-reflexivity	212
A.6	Ultraproducts of $L_1(\mu)$ spaces	216
	Bibliography	231
	Index	243
