

Contents

1	Introduction	1
1.1	DNA Chemistry and Structure	1
1.2	The Role of DNA in Biology	3
1.3	DNA Nanotechnology	4
1.3.1	DNA Nanostructures	4
1.3.2	DNA Nanodevices: Switches	6
1.3.3	DNA Nanodevices: Walkers	8
1.3.4	DNA Computation	9
1.4	Modelling DNA Self-Assembly	9
1.4.1	Why Model DNA Self-Assembly?	9
1.4.2	Atomistic and Continuum Models of DNA	10
1.4.3	Coarse-Grained Models of DNA	10
	References	16
2	A Novel DNA Model	21
2.1	A Feasibility Study	21
2.2	The Philosophy of the Model	22
2.3	Degrees of Freedom in the Model	23
2.4	The Potential	23
2.4.1	Functional Forms	23
2.4.2	Interactions	26
2.4.3	Parameterization	31
2.4.4	Neglected Features of DNA	34
2.4.5	Additional Parameters Required for Dynamical Simulations	35
	References	36

3	Methods	39
3.1	Monte Carlo Simulation	39
3.1.1	Metropolis Monte Carlo	40
3.1.2	Cluster Moves and Virtual Move Monte Carlo	42
3.2	Langevin Dynamics	44
3.3	Advanced Sampling Techniques	46
3.3.1	Umbrella Sampling	47
3.3.2	Forward Flux Sampling	48
	References	48
4	Finite Size Effects	51
4.1	Dimer Formation in the Canonical Ensemble	52
4.1.1	Heterodimer Formation	52
4.1.2	Heterodimer Convergence	55
4.1.3	Homodimer Formation	56
4.2	Summary	57
	References	57
5	Structural and Mechanical Properties of Model DNA	59
5.1	Basic Structure	59
5.2	Mechanical Properties	59
5.2.1	Double-Stranded DNA	60
5.2.2	Single-Stranded DNA	63
5.3	Summary	68
	References	68
6	Thermodynamic Properties of Model DNA	71
6.1	Single-Stranded Stacking Transition	71
6.1.1	A Statistical Model of Stacking	72
6.2	Duplex Formation	75
6.2.1	Free Energy Profile of Duplex Formation and Fraying	77
6.2.2	A Statistical Model of Duplex Formation	78
6.2.3	Structural Motifs	82
6.2.4	Coaxial Stacking	88
6.3	Summary	90
	References	91
7	Modelling DNA Tweezers	93
7.1	Tweezer Simulation Methods	93
7.1.1	The Model System	93
7.1.2	Sampling the Transitions	94
7.2	Results	96
7.3	Discussion	99
	References	100

8 Modelling a DNA Walker 101

 8.1 Walker Simulations 103

 8.1.1 Binding of a Foot to the Track 103

 8.1.2 Competition Between Feet 109

 8.1.3 Fuel Binding and Displacement 109

 8.1.4 Lifting of the Wrong Foot 110

 8.1.5 Fuel Dissociation 112

 8.2 Discussion 114

 8.2.1 Considerations for Design Modifications 116

 References 117

9 Conclusions 119

 9.1 Utility of the Model 119

 9.2 Limitations of the Model 121

 9.3 Future Work 121
