Part I Numerical Linear Algebra

1	Basic Concepts	3
1.1	Problem Statement	3
1.2	Condition and Stability	4
1.3	Computational Complexity	8
1.4	Learning Objectives, Quiz and Application	8
2	Operator Norm and Condition Number	11
2.1	Vector Norms	11
2.2	Matrix Norms	12
2.3	Condition Number	14
2.4	Learning Objectives, Quiz and Application	15
3	Matrix Factorisations	17
3.1	Triangular Matrices	17
3.2	<i>LU</i> Decomposition	18
3.3	Cholesky Decomposition	20
3.4	Learning Objectives, Quiz and Application	23
4	Elimination Methods	25
4.1	Gaussian Elimination Method	25
4.2	Pivot Strategy	28
4.3	Learning Objectives, Quiz and Application	30
5	Least Squares Problems	33
5.1	Gaussian Normal Equation	33
5.2	Householder Transformations	35
5.3	<i>QR</i> Decomposition	37
5.4	Solution of the Least Squares Problem	39
5.5	Learning Objectives, Quiz and Application	40
6	Singular Value Decomposition and Pseudoinverse	41
6.1	Singular Value Decomposition	41

6.2	Pseudoinverse	43
6.3	Learning Objectives, Quiz and Application	44
7	The Simplex Method	45
7.1	Linear Programs	45
7.2	The Simplex Step	47
7.3	Learning Objectives, Quiz and Application	50
8	Eigenvalue Problems	51
8.1	Localisation	51
8.2	Conditioning	53
8.3	Power Method.....	55
8.4	<i>QR</i> Method	58
8.5	Jacobi Method.....	61
8.6	Learning Objectives, Quiz and Application	64
9	Iterative Solution Methods	67
9.1	Inexact Solution.....	67
9.2	Banach’s Fixed Point Theorem.....	67
9.3	Linear Iteration Methods	69
9.4	Jacobi and Gauss-Seidel Methods.....	70
9.5	Diagonal Dominance and Irreducibility	71
9.6	Convergence.....	73
9.7	Learning Objectives, Quiz and Application	76
 Part II Numerical Analysis		
10	General Condition Number and Floating Point Numbers	79
10.1	Conditioning	79
10.2	Floating Point Numbers	81
10.3	Rounding	83
10.4	Stability.....	84
10.5	Learning Objectives, Quiz and Application	85
11	Polynomial Interpolation	87
11.1	Lagrange Interpolation.....	87
11.2	Interpolation Error	88
11.3	Neville’s Algorithm.....	89
11.4	Chebyshev Nodes	92
11.5	Hermite Interpolation.....	94
11.6	Learning Objectives, Quiz and Application	96
12	Interpolation with Splines	97
12.1	Splines.....	97
12.2	Cubic Splines	99
12.3	Calculation of Cubic Splines	102
12.4	Interpolation Error	103
12.5	Learning Objectives, Quiz and Application	105

13	Discrete Fourier Transform	107
13.1	Trigonometric Interpolation	107
13.2	Fourier Bases	109
13.3	Fast Fourier Transform	111
13.4	Learning Objectives, Quiz and Application	113
14	Numerical Integration	115
14.1	Quadrature Formulas	115
14.2	Newton-Cotes Formulas	117
14.3	Composite Quadrature Formulas	118
14.4	Gaussian Quadrature	120
14.5	Extrapolation	122
14.6	Experimental Convergence Order	124
14.7	Learning Objectives, Quiz and Application	125
15	Nonlinear Problems	127
15.1	Root Finding and Minimisation Problems	127
15.2	Approximation of Roots	129
15.3	One-Dimensional Minimisation	132
15.4	Multidimensional Minimisation	133
15.5	Learning Objectives, Quiz and Application	135
16	Conjugate Gradient Method	137
16.1	Quadratic Minimisation	137
16.2	Conjugate Search Directions	138
16.3	Calculation of Conjugate Directions	139
16.4	CG Method	141
16.5	Convergence of the CG Method	142
16.6	Learning Objectives, Quiz and Application	144
17	Sparse Matrices and Preconditioning	147
17.1	Sparse Matrices	147
17.2	Preconditioned CG Method	148
17.3	Further Preconditioning Matrices	150
17.4	Learning Objectives, Quiz and Application	152
18	Multidimensional Approximation	155
18.1	Grids and Triangulations	155
18.2	Approximation on Tensor Product Grids	157
18.3	Two-Dimensional Fourier Transform	159
18.4	Approximation on Triangulations	159
18.5	Learning Objectives, Quiz and Application	163

Part III Numerics for Differential Equations

19	Ordinary Differential Equations	167
19.1	Fundamentals	167
19.2	The Predator-Prey Model	168

19.3	Higher Order Equations	169
19.4	Autonomous Equations	170
19.5	Two-Body Problems	171
19.6	Explicit Solutions	171
19.7	Learning Objectives, Quiz and Application	172
20	Existence, Uniqueness and Stability	173
20.1	Existence and Uniqueness	173
20.2	Gronwall’s Lemma.....	176
20.3	Stability.....	177
20.4	Learning Objectives, Quiz and Application	179
21	Single-Step Methods.....	181
21.1	Euler Method.....	181
21.2	Consistency	183
21.3	Discrete Gronwall Lemma and Convergence.....	185
21.4	Higher-Order Methods.....	188
21.5	Learning Objectives, Quiz and Application	189
22	Runge-Kutta Methods	191
22.1	Motivation	191
22.2	Runge-Kutta Methods	192
22.3	Well-Posedness	194
22.4	Consistency	195
22.5	Learning Objectives, Quiz and Application	199
23	Multistep Methods.....	201
23.1	General Multistep Methods.....	201
23.2	Consistency	202
23.3	Adams Methods.....	204
23.4	Predictor-Corrector Method	206
23.5	Learning Objectives, Quiz and Application	207
24	Convergence of Multistep Methods.....	209
24.1	Difference Equations	209
24.2	Zero-Stability	211
24.3	Convergence.....	212
24.4	Learning Objectives, Quiz and Application	215
25	Stiff Differential Equations	217
25.1	Stiffness	217
25.2	A-Stability.....	218
25.3	Gradient Flows	221
25.4	Heat Equation	223
25.5	Learning Objectives, Quiz and Application	224
26	Step Size Control	227
26.1	A Posteriori Error Control	227

26.2	Adaptive Algorithm	230
26.3	Control Procedure	230
26.4	Extrapolation	231
26.5	Learning Objectives, Quiz and Application	232
27	Symplectic, Shooting and dG Methods	233
27.1	Hamiltonian Systems	233
27.2	Symplectic Methods	235
27.3	Shooting Method	239
27.4	Discontinuous Galerkin Methods	240
27.5	Learning Objectives, Quiz and Application	241
 Part IV Problems and Projects		
28	Problems on Numerical Linear Algebra	245
28.1	Basic Concepts	245
28.2	Operator Norm and Condition Number	246
28.3	Matrix Factorisations	250
28.4	Elimination Methods	253
28.5	Least Squares Problems	255
28.6	Singular Value Decomposition and Pseudoinverse	258
28.7	The Simplex Method	260
28.8	Eigenvalue Problems	262
28.9	Iterative Solution Methods	266
29	Problems on Numerical Analysis	269
29.1	General Condition Number and Machine Numbers	269
29.2	Polynomial Interpolation	271
29.3	Interpolation with Splines	274
29.4	Discrete Fourier Transform	277
29.5	Numerical Integration	280
29.6	Nonlinear Problems	284
29.7	Conjugate Gradients Method	287
29.8	Sparse Matrices and Preconditioning	290
29.9	Multidimensional Approximation	292
30	Problems on Numerics for Differential Equations	297
30.1	Ordinary Differential Equations	297
30.2	Existence, Uniqueness and Stability	300
30.3	Single-Step Methods	302
30.4	Runge-Kutta Methods	306
30.5	Multistep Methods	308
30.6	Convergence of Multistep Methods	310
30.7	Stiff Differential Equations	313
30.8	Step Size Control	315
30.9	Symplectic, Shooting and dG Methods	317

Part V Supplementary Material

31	Results from Linear Algebra	323
31.1	Scalar Product of Vectors	323
31.2	Determinant of Square Matrices	323
31.3	Image and Kernel of Linear Mappings.....	324
31.4	Eigenvalues and Diagonalisability	325
31.5	Jordan Normal Form	326
32	Results from Analysis	327
32.1	Continuous and Differentiable Functions.....	327
32.2	Mean Value Theorem and Taylor Polynomials	328
32.3	Landau Symbols	329
32.4	Fundamental Theorem of Algebra	329
32.5	Multidimensional Calculus	330
33	Introduction to C++	333
33.1	Structure	333
33.2	Classes	333
33.3	Types	334
33.4	Control Statements.....	335
33.5	Logical Expressions and Increments	335
33.6	Functions	336
33.7	Pointers	337
33.8	Dynamic Arrays.....	337
33.9	Working with Matrices	338
33.10	Time Measurement, Saving and Packages	338
34	Introduction to MATLAB	341
34.1	Structure	341
34.2	Lists and Arrays.....	341
34.3	Matrix Operations.....	342
34.4	Manipulation of Arrays	342
34.5	Elementary Functions.....	343
34.6	Loops and Control Statements	343
34.7	Text and Graphic Output	344
34.8	Creating New Functions	344
34.9	Various Commands	345
34.10	Sparse Matrices	345
34.11	Examples	345
34.12	Free Alternative	346
35	Introduction to Python	349
35.1	Structure	349
35.2	Elementary Commands	350
35.3	Types	351
35.4	Control Statements.....	351

35.5	Logical Expressions	352
35.6	Functions	352
35.7	Lists.....	352
35.8	Timing, Saving and Plotting.....	353
36	Example Programs in MATLAB, C++ and Python	355
36.1	<i>LU</i> Decomposition and Solving Triangular Systems	355
36.2	Polynomial Interpolation and Neville’s Scheme	357
36.3	Numerical Solution of Ordinary Differential Equations	360
Advanced Topics		367
Bibliography		369
Index.....		373
