1 Synthesis of Natural Products Containing Medium-size Carbocycles by Ring-closing Alkene Metathesis 1

Nicolas Blanchard and Jacques Eustache

1.1 Introduction 1

1.2 Formation of Five-membered Carbocycles by RCM 1

1.3 Formation of Six-membered Carbocycles by RCM 11

1.4 Formation of Seven-membered Carbocycles by RCM 22

1.5 Formation of Eight-membered Carbocycles by RCM 30

1.6 Formation of Nine-membered Carbocycles by RCM 33

1.7 Formation of 10-membered Carbocycles by RCM 34

1.8 Conclusion 39

References 40

2 Natural Products Containing Medium-sized Nitrogen Heterocycles Synthesized by Ring-closing Alkene Metathesis 45

Sebastiaan (Bas) A. M. W. van den Broek, Silvie A. Meeuwissen, Floris L. van Delft, and Floris P. J. T. Rutjes

2.1 Introduction 45

2.2 Five-membered Nitrogen Heterocycles 47

2.2.1 Dihydropyrroles 47

2.2.2 Pyrrolidine Alkaloids 47

2.2.2.1 Pyrrolidines 47

2.2.2.2 Dipyrrolidines 49

2.2.2.3 Polyhydroxypyrrolidines 49

2.2.3 Indolizidine Alkaloids 52

2.2.3.1 Polycyclic Indolizidines 52

2.2.3.2	Polyhydroxyindolizidines	55
2.2.4	Pyrrolizidine Alkaloids	59
2.3	Six-membered Nitrogen Heterocycles	61
2.3.1	Piperidine Alkaloids	61
2.3.1.1	Piperidines	61
2.3.1.2	Piperidine Carboxylic Acids	66
2.3.1.3	Piperidones	68
2.3.1.4	Polyhydroxypiperidines	69
2.3.2	Indolizidine Alkaloids	70
2.3.3	Quinolizidine Alkaloids	73
2.4	Seven-membered Nitrogen Heterocycles	78
2.5	Eight-membered Nitrogen Heterocycles	81
2.6	Conclusion	82
	References	83
3	Synthesis of Natural Products Containing Medium-size Oxygen Heterocycles by Ring-closing Alkene Metathesis	87
	<i>Jon D. Rainier</i>	
3.1	Introduction	87
3.2	General RCM Approaches to Medium Rings	89
3.3	Laurencin	95
3.4	Eunicellins/Eleutherobin	102
3.5	Helianane	104
3.6	Octalactin A	105
3.7	Microcarpalide and the Herbarums	106
3.8	Marine Ladder Toxins	109
3.8.1	Ciguatoxin	109
3.8.2	Brevetoxin	117
3.8.3	Gambierol, Gambieric Acid, Olefinic-ester Cyclizations	120
3.9	Conclusion	124
	Acknowledgments	124
	References	124
4	Phosphorus and Sulfur Heterocycles via Ring-closing Metathesis: Application in Natural Product Synthesis	129
	<i>Christopher D. Thomas and Paul R. Hanson</i>	
4.1	Introduction	129
4.2	Synthesis and Reactivity of Sultones Derived from RCM	129
4.3	Total Synthesis of the Originally Proposed Structure of (±)-Mycothiazole	132
4.4	Synthesis and Reactivity of Phosphates from RCM	134
4.5	Applications of Phosphate Tethers in the Synthesis of Dolabelide C	140
4.6	Conclusion	144

5 Synthesis of Natural Products Containing Macrocycles by Alkene

Ring-closing Metathesis 149

Ana Gradillas and Javier Pérez-Castells

- 5.1 Introduction 149
- 5.2 Organization of the Chapter 151
- 5.3 Macrocyclic Polyketides 152
 - 5.3.1 Resorcinylic Macrolides 152
 - 5.3.2 Salicylate Macrolides 155
 - 5.3.3 Other Antibiotic Macrolides 158
 - 5.3.4 Macrocyclic Musk 162
 - 5.3.5 Epothilones 163
 - 5.3.6 Amphidinolides 165
 - 5.3.7 Other Polyketides 167
 - 5.3.8 Natural Cyclophanes 168
- 5.4 Terpenoids 169
 - 5.4.1 Diterpenoids 169
 - 5.4.2 Macrocyclic Lipids 171
- 5.5 Macrocycles of Amino Acid Origin 172
 - 5.5.1 Macrolactams 172
 - 5.5.2 Cyclodepsipeptides 173
 - 5.5.3 Alkaloids 174
- 5.6 Macrocyclic Glycolipids 175
- 5.7 Conclusions and Outlook 177
- References 178

6 Synthesis of Natural Products and Related Compounds Using Ene–Yne Metathesis 183

Miwako Mori

- 6.1 Introduction 183
- 6.2 Synthesis of Natural Products and Related Compounds Using Ene–yne Metathesis 185
- 6.3 Synthesis of Natural Products and Related Compounds Using Ene–yne Cross-metathesis (CM) 195
- 6.4 Synthesis of Natural Products Using Skeletal Reorganization 197
- References 202

7 Ring-closing Alkyne Metathesis in Natural Product Synthesis 205

Paul W. Davies

- 7.1 Introduction 205
- 7.2 Alkyne Metathesis 205
 - 7.2.1 Background to Alkyne Metathesis 206
- 7.3 Ring-closing Alkyne Metathesis 207

7.3.1	RCAM as a Synthetic Strategy	210
7.4	Applications of RCAM in Natural Product Synthesis	211
7.4.1	RCAM/Hydrogenation Strategies	211
7.4.1.1	Macrocyclic Musks	211
7.4.1.2	Prostaglandin Lactones	212
7.4.1.3	Sophorolipid Lactone	213
7.4.1.4	Epothilone A	213
7.4.1.5	Cruentaren A	215
7.4.1.6	Latrunculins A, B, C, M, and S	216
7.4.1.7	Myxovirescin A ₁	218
7.4.2	RCAM and Alternative Alkyne Manipulations	218
7.4.2.1	Citreofuran	218
7.4.2.2	Amphidinolide V	221
7.5	Conclusions	221
	References	221

8.1	Introduction	225
8.2	Temporary Silicon–Tethered Ring–Closing Metathesis Reactions	226
8.2.1	O–SiR ₂ –O Tethered Substrates: Symmetrical Silaketals	226
8.2.1.1	C ₂ -Symmetrical Silaketals and Applications	227
8.2.1.2	Achiral and Racemic Silaketals	229
8.2.1.3	Related Applications and Developments	229
8.2.2	O–SiR ₂ –O Tethered Substrates: Unsymmetrical Silaketals	230
8.2.2.1	Spiroketal	230
8.2.2.2	Long-range Asymmetric Induction	233
8.2.2.3	Annonaceous Acetogenins	237
8.2.2.4	Trisubstituted Alkenes	239
8.2.2.5	Related Applications and Developments	240
8.2.3	Dienyne TST-RCM: Symmetrical and Unsymmetrical Silanes	240
8.2.3.1	Macrolide Antibiotics	242
8.2.4	O–SiR ₂ –C Tethered Substrates: Allyl and Vinylsiloxanes	244
8.2.4.1	Lignans from Allylsiloxanes	245
8.2.4.2	Z-Trisubstituted Alkenes from Allylsiloxanes	248
8.2.4.3	Di- and Trisubstituted Alkenes from Vinylsiloxanes	250
8.2.4.4	Related Applications and Developments	255
8.2.5	Enyne TST-RCM: Tri- and Tetrasubstituted Acyclic Dienes	255
8.2.5.1	Illudins	255
8.3	Conclusions and Outlook	256
	Acknowledgments	257

9 Metathesis Involving a Relay and Applications in Natural Product**Synthesis 261***Thomas R. Hoye and Junha Jeon*

- 9.1 Introduction 261
- 9.1.1 The Relay Concept 261
- 9.1.2 Basic Tenets of RCM 262
- 9.2 Early Relay Metathesis Discoveries 263
- 9.3 Examples of Relay Metathesis Directed at Targets Other than Natural Products 268
- 9.4 Examples of Relay Metathesis Motivated by Natural Product Synthesis 269
- 9.5 Examples of Relay Metatheses Thwarted in Achieving the Desired Outcome 278
 - 9.5.1 Interference from a Truncation Event 278
 - 9.5.2 Interference from Premature Macrocyclization 279
- 9.6 Conclusion 281
- Acknowledgments 283
- References 283

10 Cross-metathesis in Natural Products Synthesis 287*Joëlle Prunet and Laurence Grimaud*

- 10.1 Introduction 287
- 10.2 Functionalization of Olefins 287
 - 10.2.1 Cross-metathesis with Acrylate Derivatives 287
 - 10.2.1.1 Acrylonitrile 287
 - 10.2.1.2 Thioacrylates 288
 - 10.2.1.3 Acrylic Acid 288
 - 10.2.1.4 Acrylimides 289
 - 10.2.1.5 Acrylates 290
 - 10.2.1.6 Acrolein 291
 - 10.2.1.7 Vinyl Ketones 292
 - 10.2.2 Cross-metathesis with Vinyl Derivatives 292
 - 10.2.2.1 Vinyl Boronates 292
 - 10.2.2.2 Vinyl Silanes 293
 - 10.2.3 Cross-metathesis with Allylic Derivatives 293
 - 10.2.3.1 Allyl Silanes 294
 - 10.2.3.2 Allyl Phosphonates 294
 - 10.2.3.3 Allylic Alcohol Derivatives 294
 - 10.2.3.4 Miscellaneous 295
- 10.3 Appending a Side Chain 296
 - 10.3.1 With No Functional Group 297
 - 10.3.1.1 A Simple Case 297
 - 10.3.1.2 The Specific Case of Isopropylidene 297
 - 10.3.1.3 Removing Part of a Side Chain 298
 - 10.3.2 With Functional Groups 299

10.4	Couplings	300
10.5	Cascade Processes Involving CM	303
10.5.1	ROM/CM	303
10.5.2	ROM/CM/RCM	305
10.5.3	ROM/RCM/CM	305
10.5.4	CM/RCM	306
10.5.5	RCEYM/CM	307
10.6	Ene-yne CM	308
10.7	Alkyne CM	309
10.8	Conclusion and Perspectives	310
	Acknowledgments	310
	References	310
11	Cascade Metathesis in Natural Product Synthesis	313
	<i>Marta Porta and Siegfried Blechert</i>	
11.1	Introduction	313
11.2	RCM-CM Sequences	314
11.2.1	Ene-ene RCM-CM	314
11.2.1.1	Synthesis of (3 <i>R</i> ,9 <i>R</i> ,10 <i>R</i>)-Panaxytriol	314
11.2.2	Ene-yne-ene RCM-CM	315
11.2.2.1	Synthesis of (+)-8- <i>epi</i> -Xanthatin	316
11.3	Ene-yne-ene RCM-RCM	316
11.3.1	Synthesis of Bicyclic Structures	317
11.3.1.1	Synthesis of (-)-Securinine and (+)-Viroallosecurinine	317
11.3.1.2	Total Synthesis of <i>ent</i> -Lepadine F and G	318
11.3.2	Synthesis of Tricyclic Compounds	319
11.3.2.1	Synthesis of (±)-Guanacastepene A	319
11.3.2.2	Approach to Taxane Analogs	320
11.3.3	Synthesis of Natural Products Containing Tetracycles	321
11.3.3.1	Synthesis of Erythrina Alkaloids	321
11.4	ROM-CM Sequences	322
11.4.1	Synthesis of Bistramide A	323
11.5	RCM-ROM Sequences – Ring-rearrangement Metathesis (RRM)	325
11.5.1	RRM of Monocyclic Substrates	326
11.5.1.1	Synthesis of Tetraonerines	326
11.5.1.2	Synthesis of (-)-Swainsonine and (+)-Castanospermine	326
11.5.1.3	Synthesis of (+)- <i>trans</i> -195A	327
11.5.1.4	Synthesis of (-)-Centrolobine – Diastereoselective RRM (<i>d</i> -RRM)	328
11.5.2	RRM of Bicyclic Substrates	329
11.5.2.1	Synthesis of Indolizidine 251F, (±)- <i>trans</i> -Lumausyne and Aburatubolactam A	330
11.5.2.2	Synthesis of (+)- <i>ent</i> -Lepadine B	331

11.6	RCM–ROM Sequences Combined with Other Metathesis Reactions	332
11.6.1	RCM–ROM–RCM	332
11.6.1.1	RCM–ROM–RCM Cascades of Monocyclic Structures	333
11.6.1.2	RCM–ROM–RCM Cascades of Bicyclic Structures	336
11.6.2	RCM–ROM–CM	337
11.6.2.1	Synthesis of (–)-Lasubine II	337
11.6.2.2	Synthesis of (+)-Cylindramide A and Bicyclic Core of Geodin A	338
11.6.2.3	Total Synthesis of (+)-Mycoepoxydiene	338
11.7	Conclusions and Outlook	339
