

Contents

1	Foundations and Intraprocedural Optimization.	1
1.1	Introduction.	1
1.2	Avoiding Redundant Computations	7
1.3	Background: An Operational Semantics	8
1.4	Elimination of Redundant Computations.	11
1.5	Background: Complete Lattices	16
1.6	Least Solution or MOP Solution?.	27
1.7	Removal of Assignments to Dead Variables	32
1.8	Removal of Assignments Between Variables.	40
1.9	Constant Folding	43
1.10	Interval Analysis	54
1.11	Alias Analysis	67
1.12	Fixed-Point Algorithms.	83
1.13	Elimination of Partial Redundancies.	89
1.14	Application: Moving Loop-Invariant Code	97
1.15	Removal of Partially Dead Assignments.	102
1.16	Exercises.	108
1.17	Literature	114
2	Interprocedural Optimization.	115
2.1	Programs with Procedures.	115
2.2	Extended Operational Semantics	117
2.3	Inlining.	121
2.4	Tail-Call Optimization	123
2.5	Interprocedural Analysis	124
2.6	The Functional Approach	125
2.7	Interprocedural Reachability	131
2.8	Demand-Driven Interprocedural Analysis	132
2.9	The Call-String Approach	135
2.10	Exercises.	137
2.11	Literature	139

3	Optimization of Functional Programs	141
3.1	A Simple Functional Programming Language	142
3.2	Some Simple Optimizations	143
3.3	Inlining	146
3.4	Specialization of Recursive Functions	147
3.5	An Improved Value Analysis	149
3.6	Elimination of Intermediate Data Structures	155
3.7	Improving the Evaluation Order: Strictness Analysis	159
3.8	Exercises	166
3.9	Literature	170
	References	171
