

Contents

Preface to the First Edition	v
Preface to the Second Edition	vii
Translator's Preface	ix
Contributors	xi

1 / Introduction to Astronomical Literature and Nomenclature

W. D. Heintz

1.1 The Universe and the Amateur Astronomer	1
1.2 Astronomical Literature	2
1.3 Charts and Catalogs	3
1.4 Almanacs	5
1.5 Reduction of Observations	6

2 / The Observing Instruments of the Amateur Astronomer

W. Jahn

2.1 The Performance of Astronomical Observing Instruments	7
2.2 The Components of Astronomical Observing Instruments	31

3 / Optical Radiation Receivers

R. Kühn, revised by F. Schmeidler

3.1 Introduction	106
3.2 The Human Eye	107
3.3 The Photographic Emulsion	111
3.4 The Photoelectric Cell	122
3.5 Television Technique	124

4 / Radio Astronomy for Amateur Astronomers

P. Wellmann and H. A. Schmid

4.1 Introduction	126
4.2 Fundamentals of Radio Astronomy	126

xiii

4.3 The Instruments	129
4.4 The Radio-Astronomical Objects	136
4.5 The Instrumental Possibilities of the Amateur Astronomer	140

5 / The Terrestrial Atmosphere and Its Effects

F. Schmeidler

5.1 General Remarks Concerning the Earth's Atmosphere	149
5.2 Weather-Dependant Phenomena	149
5.3 Permanent Atmospheric Phenomena	156

6 / Fundamentals of Spherical Astronomy

K. Schütte

6.1 Introduction	164
6.2 The Coordinates	164
6.3 The Time and the Phenomena of Daily Motion	171
6.4 Changes in the Coordinates of a Star	175
6.5 Calendars, Years, Julian Dates, and Normal Times	181
6.6 Variability of the Rotation of the Earth, Ephemeris Time and the Definition of the Second	184
6.7 Spherical Trigonometry	186

7 / Modern Sundials

K. Schütte

7.1 Introduction	191
7.2 The Equinoxial Sundial	192
7.3 Design of a Horizontal Dial and of a Vertical East-West Dial	192
7.4 The Construction of a Horizontal and a Vertical East-West Dial	194
7.5 The Vertical Declining Dial	195

8 / Applied Mathematics for Amateur Astronomers

F. Schmeidler

8.1 Introduction	204
8.2 Theory of Errors	204
8.3 Interpolation and Numerical Differentiation and Integration	210
8.4 Photographic Astrometry	213
8.5 Determination of the Position and Brightness of Planets and of the Planetographic Coordinates	215
8.6 The Reduction of Star Occultations	219

9 / The Sun

R. Müller

9.1 Introduction	221
9.2 Observation of the Sun	221
9.3 Phenomena on the Sun's Disc	227
9.4 Determination of Positions of Solar Phenomena	240
9.5 Photography of the Sun	250
9.6 Conclusions	253

10 / Observation of Total Solar Eclipses

W. Petri

10.1 Photography of the Solar Corona	255
10.2 Special Astronomical Programs	258
10.3 Special Terrestrial Programs	259
10.4 The Observing Station	261

11 / The Moon

G. D. Roth

11.1 Problems and Ideas of Lunar Observations	264
11.2 Conditions of Visibility	269
11.3 The Lunar Formations	271
11.4 Optical Observations	273
11.5 The Grid of Lunar Maps	285

12 / Lunar Eclipses

F. Link

12.1 Introduction	289
12.2 Prediction of Lunar Eclipses	293
12.3 Enlargement of the Earth's Shadow	299
12.4 Photometry of Lunar Eclipses	303
12.5 Photography of Lunar Eclipses	310

13 / The Observation of Star Occultations

A. Güttler, revised by W. D. Heintz

13.1 General Remarks	313
13.2 Predictions	313
13.3 Optical Requirements	315
13.4 Time Measurement	317

13.5 Evaluation of the Observational Results	320
13.6 Occultations of the Planets	322

14 / Artificial Earth Satellites

W. Petri

14.1 Nature and Purpose of the Satellites	325
14.2 Conditions of Visibility	327
14.3 Optical Observations	332
14.4 Time Services	337
14.5 Radio Observations	339
14.6 Elementary Calculation of the Orbit	342
14.7 Elliptical Orbits	345

15 / The Observation of the Planets

W. Sandner

15.1 The Observation of Planetary Surfaces	348
15.2 The Observation of the Various Planets	354
15.3 Star Occultations by Planets	384
15.4 The Photography of Planetary Surfaces	385
15.5 Micrometer Measurements and Photometry of the Planetary Surfaces	391

16 / The Observation of Comets

A. Güttler, revised by N. B. Richter

16.1 Introductory Remarks	393
16.2 Visual Observations	394
16.3 Visual Determination of Position	397
16.4 Photographic Determination of Position	400
16.5 Observations of Cometary Structure	401
16.6 Photometry	406
16.7 Spectrum and Polarization	407

17 / Meteors and Fireballs

F. Schmeidler

17.1 General Notes About Meteors	409
17.2 Methods of Observation	410
17.3 Special Observational Problems	412
17.4 Determination of Meteor Orbits	415

18 / Noctilucent Clouds, Aurorae, Zodiacal Light

W. Sandner

18.1 Introduction	418
18.2 The Zodiacal Light	419
18.3 Observation of Aurorae	424
18.4 Noctilucent Clouds	430
18.5 Luminous Bands	435
18.6 The Blue Sun	438

19 / The Photometry of Stars and Planets

W. Jahn

19.1 On the Measurement of the Sensitivity of the Eye	439
19.2 The Photometric Capabilities of the Eye	439
19.3 Sources of Error in the Estimation and Measurement of Brightness	440
19.4 The Preparation of a Brightness Estimate	442
19.5 Brightness Estimates	445
19.6 Brightness Measurements	451
19.7 The Reduction of Photometric Observations of Variable Stars	457
19.8 On the Photometry of the Major Planets	460
19.9 On the Photometry of the Minor Planets	468
19.10 Notes on the Measurement of Colors	470

20 / Double Stars

W. D. Heintz

20.1 The Visual Double Stars	472
20.2 Micrometers and Visual Measurements	476
20.3 Photographic Observations	483
20.4 Orbital Elements and Ephemerides	484

21 / The Milky Way and the Galaxies

R. Kühn

21.1 Introduction	487
21.2 The Instruments	488
21.3 The Most Important Objects	493

22 / Appendix 500

23 / Bibliography 535

Index 557
