

Contents

Part I Physical Processes

1	The Framework	3
1.1	Sources	3
1.2	The Parameter Space of High-Energy Astrophysics	4
1.3	High-Energy Space Instrumentation and Their Limitations	9
1.3.1	Basic Principles of X-Ray Detectors	9
1.3.2	Spectral and Image Extraction, Fitting	10
1.3.3	Optics	12
1.3.4	Some Recent High-Energy Astrophysics Instruments and Satellites	14
1.4	Historical Remarks	15
1.5	Bibliography	20
	References	20
2	Radiation of an Accelerated Charge	21
2.1	Energy Loss by a Non-relativistic Accelerated Charge	21
2.2	Spectrum of the Radiation	23
2.3	Radiation of a Relativistic Accelerated Particle	25
2.4	Relativistic Aberration	27
2.5	Bibliography	29
	References	29
3	Bremsstrahlung	31
3.1	Emission from Isolated Electron–Ion Pairs	32
3.2	Electron Distribution: The Impact Parameter	33
3.3	Electron Distributions: Thermal Bremsstrahlung	34
3.4	Line Emission	36
3.5	Example: Clusters of Galaxies	39
3.6	Bibliography	44
	References	46

4	Cyclotron Line Emission	47
4.1	Gyro Frequency	47
4.2	Emitted Power	49
4.3	Observed Cyclotron Features	51
4.4	Bibliography	55
	References	55
5	Synchrotron Emission	57
5.1	Power Emitted by a Single Electron in a Magnetic Field	57
5.2	Synchrotron Characteristic Frequency	58
5.3	Spectrum Emitted by a Population of Electrons	62
5.3.1	Synchrotron Self-absorption	63
5.4	Examples	65
5.4.1	The Infrared Emission of the Quasar 3C 273	65
5.4.2	Far Infrared Emission of Radio-Quiet Active Galaxies ...	66
5.4.3	The Crab Nebula	70
5.5	Bibliography	73
	References	73
6	Compton Processes	75
6.1	Thomson Cross Section	75
6.2	Compton Scattering	77
6.3	Power Emitted by a Single Electron	82
6.4	Power Emitted by a Distribution of Electrons	83
6.5	Energy Gains Per Scattering	84
6.5.1	Non-relativistic Electrons	84
6.5.2	Relativistic Electrons	85
6.6	Multiple Scattering in an Optically-Thin Limit	86
6.7	Example: X-Ray Emission of AGN	86
6.8	Bibliography	89
	References	89
7	Comptonisation	91
7.1	Compton Temperature	91
7.2	The y Parameter	92
7.3	The Kompaneets Equation	93
7.4	Solutions to the Kompaneets Equation	94
7.4.1	Equilibrium Solution	94
7.4.2	Saturated Comptonisation: $y \gg 1$	95
7.4.3	Intermediary Case, $y \simeq 1$	96
7.4.4	Low Optical Depth	96
7.5	The Sunyaev–Zeldovich Effect	96
7.6	Bibliography	103
	References	103

8	Pair Processes	105
8.1	Pair Creation	105
8.2	Pair Annihilation	108
8.3	Bibliography	109
	References	109
9	Particle Acceleration	111
9.1	Second-Order Fermi Acceleration	114
9.2	Diffusive Shock Acceleration	116
9.3	Highest Energy Particles	119
9.4	Bibliography	123
	References	123
10	Accretion	125
10.1	Eddington Luminosity and Accretion Rate	125
10.2	Spherically-Symmetric Accretion	127
10.3	Geometrically-Thin Optically-Thick Accretion Disks	130
10.3.1	Conservation of Mass	131
10.3.2	Conservation of Angular Momentum	132
10.3.3	Stationary Disks	134
10.3.4	Spectrum of the Disk	136
10.3.5	Viscosity	138
10.4	Observational Evidence for Geometrically-Thin Optically-Thick Accretion Disks	139
10.5	Bibliography	143
	References	143
11	Radiation Inefficient Accretion Flows	145
11.1	Advection-Dominated Accretion Flows (ADAFs)	145
11.2	Spectrum of an ADAF	148
11.3	The Galactic Centre and the Source Sgr A*	148
11.4	Bibliography	154
	References	154

Part II Astrophysical Objects

12	Black Holes and Accretion Efficiency	157
12.1	Metric and Index Gymnastics	158
12.2	Relativistic Hydrostatic Equilibrium	159
12.3	Schwarzschild Metric	163
12.4	Particle Motion Around Schwarzschild Black Holes	165
12.5	Trajectories of Massive Particles in the Schwarzschild Geometry	169
12.5.1	Radial Geodesics of Massive Particles	170
12.5.2	Non-radial Orbits	173
12.6	Kerr Black Holes	177
12.6.1	Relativistically-Broadened Emission Lines	183

12.7	Energy Gain from a Kerr Black Hole	185
12.8	Black Hole Radiation	186
12.9	Bibliography	188
	References	189
13	Neutron Stars	191
13.1	Neutron Star Equation of State	192
13.1.1	The Harrison–Wheeler Equation of State	194
13.1.2	Structure of Neutron Stars	199
13.1.3	The Maximum Mass of a Neutron Star	199
13.2	Bibliography	201
	References	203
14	Pulsars	205
14.1	Basic Observational Facts	205
14.1.1	Periods and their Derivatives	205
14.1.2	The Nature of Pulsars	206
14.1.3	Glitches	209
14.1.4	Distances to Pulsars	209
14.1.5	Pulsar Distribution in the Galaxy	212
14.2	Magnetic Dipole Model	212
14.2.1	Pulsar Ages	215
14.3	The Aligned Rotator and the Pulsar Magnetosphere	217
14.3.1	Maximum Particle Energy	219
14.4	Radio Quiet Pulsars	222
14.5	Bibliography	224
	References	224
15	The Hulse–Taylor Pulsar and Gravitational Radiation	225
15.1	Binary Pulsar Systems	226
15.2	Direct Detection of Gravitational Waves	230
15.3	Bibliography	232
	References	233
16	X-Ray Binaries	235
16.1	Populations of X-Ray Sources	235
16.2	Classification of X-Ray Binaries	237
16.3	High-Mass X-Ray Binaries, the X-Ray Pulsars	240
16.4	Low-Mass X-Ray Binaries (LMXB)	246
16.4.1	Bursts	249
16.5	Black Hole Candidates	255
16.5.1	Dynamical Evidence in X-Ray Binaries	255
16.5.2	Intrinsic Signatures	257
16.5.3	Micro-quasars	260
16.6	Bibliography	263
	References	263

17 X-Ray Binaries Evolution..... 265

17.1 Millisecond Pulsars 266

17.2 The Eclipsing Pulsar 269

17.3 Bibliography 274

References..... 274

18 Relativistic Jets 275

18.1 Relating the Observed Jet Properties to the Intrinsic Conditions .. 277

18.2 Superluminal Motion 280

18.3 Bibliography 283

References..... 283

19 Gamma Ray Bursts..... 285

19.1 Short History 285

19.2 Homogeneous Distribution of Events 289

19.3 Interpretation 290

19.4 Afterglows 291

19.5 GRBs as Cosmological Probes 295

19.6 Bibliography 295

References..... 295

20 Active Galactic Nuclei..... 297

20.1 Introduction to Active Galactic Nuclei (AGN) 297

20.2 Basic Physical Properties of AGN..... 298

20.3 Categories of Active Galactic Nuclei..... 300

20.4 The Emission Components 301

20.4.1 Continuum Emission 301

20.4.2 Line Emission..... 305

20.5 Seyfert 1 and Seyfert 2 Galaxies..... 308

20.6 Radio Galaxies 311

20.6.1 Extended Lobes of Radio Galaxies 312

20.7 AGN Statistics and Evolution..... 315

20.8 Link of AGN with Host Galaxies..... 317

20.9 Bibliography 319

References..... 319

21 The Diffuse X-Ray Background and Other Cosmic Backgrounds 321

21.1 The Diffuse X-Ray Background 321

21.2 The Different Diffuse Extragalactic Backgrounds 324

References..... 327

Index..... 329
