### Preface *XI*

|          |                                                                   |           |
|----------|-------------------------------------------------------------------|-----------|
| <b>1</b> | <b>Harmonic Oscillators and the Universal Language of Science</b> | <b>1</b>  |
| 1.1      | Harmonic Oscillator                                               | 1         |
| 1.1.1    | Complex Canonical Variables                                       | 3         |
| 1.2      | Classical Rotation                                                | 4         |
| 1.2.1    | Classical Spin and Magnetic Resonance                             | 5         |
| 1.3      | Collective Variables and Harmonic Oscillators in $k$ -space       | 8         |
| 1.3.1    | Chain of Masses and Springs                                       | 8         |
| 1.3.2    | Chain of Magnetic Particles                                       | 9         |
| 1.4      | Discussion                                                        | 11        |
| <b>2</b> | <b>Magnons in Ferromagnets and Antiferromagnets</b>               | <b>13</b> |
| 2.1      | Phenomenological Description                                      | 14        |
| 2.1.1    | Magnons in a Ferromagnet                                          | 14        |
| 2.1.1.1  | Holstein–Primakoff Transformation                                 | 16        |
| 2.1.1.2  | The Spectrum of Magnons                                           | 19        |
| 2.2      | Microscopic Modeling                                              | 21        |
| 2.2.1    | Magnons in a Two-Sublattice Antiferromagnet                       | 21        |
| 2.2.1.1  | Hamiltonian                                                       | 21        |
| 2.2.1.2  | Spectrum of Magnons                                               | 25        |
| 2.2.2    | Magnon–Magnon Interactions                                        | 26        |
| 2.3      | Nuclear Magnons                                                   | 28        |
| 2.4      | Magnetoelastic Waves, Quasi Phonons                               | 30        |
| 2.5      | Discussion                                                        | 33        |
| <b>3</b> | <b>Relaxation of Magnons</b>                                      | <b>35</b> |
| 3.1      | Master Equation                                                   | 35        |
| 3.2      | Relaxation of Bose Quasi Particles                                | 37        |
| 3.2.1    | Relaxation Process of Harmonic Oscillators                        | 37        |
| 3.2.2    | Magnon–Electron Scattering                                        | 39        |
| 3.3      | Relaxation via an Intermediate Damped Dynamic System              | 43        |
| 3.4      | Ferromagnetic Resonance Linewidth                                 | 46        |
| 3.5      | Magnons and Macroscopic Dynamic Equation                          | 49        |

|          |                                                                    |            |
|----------|--------------------------------------------------------------------|------------|
| 3.5.1    | Linearized Landau–Lifshitz Equation                                | 50         |
| 3.6      | Relaxation of Coupled Oscillations                                 | 51         |
| 3.6.1    | Example 1: Nuclear Magnons                                         | 53         |
| 3.6.2    | Example 2: Magnetoelastic Oscillations                             | 54         |
| 3.7      | Discussion                                                         | 57         |
| <b>4</b> | <b>Microwave Pumping of Magnons</b>                                | <b>59</b>  |
| 4.1      | Linear Theory                                                      | 60         |
| 4.1.1    | Ferromagnetic Resonance                                            | 61         |
| 4.1.2    | Threshold of Parametric Resonance                                  | 61         |
| 4.2      | Parametric Resonance in a Resonator Cavity                         | 63         |
| 4.3      | Nonlinear SR Theory                                                | 67         |
| 4.4      | Experimental Techniques                                            | 71         |
| 4.5      | Experimental Results                                               | 73         |
| 4.5.1    | Equivalent Circuit                                                 | 74         |
| 4.5.2    | SR Theory and Experiment                                           | 76         |
| 4.5.2.1  | Modulation Response                                                | 79         |
| 4.6      | Discussion                                                         | 83         |
| <b>5</b> | <b>Thermodynamic Description of Strongly Excited Magnon System</b> | <b>85</b>  |
| 5.1      | Principal Equations                                                | 86         |
| 5.1.1    | Hamiltonian                                                        | 86         |
| 5.1.2    | Unitary Transformation                                             | 87         |
| 5.1.3    | Bogoliubov Transformation                                          | 88         |
| 5.1.4    | Effective Temperature $T_{\text{eff}} = 0$                         | 90         |
| 5.1.5    | Effective Temperature $T_{\text{eff}} \neq 0$                      | 91         |
| 5.1.5.1  | Maximum of Entropy                                                 | 93         |
| 5.2      | Exact Solutions                                                    | 94         |
| 5.2.1    | The Effective Temperature                                          | 96         |
| 5.2.1.1  | Instantaneous Switching                                            | 96         |
| 5.2.1.2  | Adiabatic Switching                                                | 97         |
| 5.2.1.3  | Thermodynamic Stability                                            | 97         |
| 5.2.2    | Collective Oscillations                                            | 98         |
| 5.3      | Magnon Pumping in a Resonator                                      | 100        |
| 5.4      | Discussion                                                         | 101        |
| <b>6</b> | <b>Bose–Einstein Condensation of Quasi Equilibrium Magnons</b>     | <b>103</b> |
| 6.1      | Bose Gas of Magnons                                                | 103        |
| 6.1.1    | Ideal Bose Gas                                                     | 103        |
| 6.1.2    | Mathematical Analogy with BEC                                      | 105        |
| 6.2      | Quasi Equilibrium Magnons                                          | 105        |
| 6.2.1    | Ideal Gas of Quasi Equilibrium Magnons                             | 107        |
| 6.2.2    | Example: Isotropic Spectrum                                        | 107        |
| 6.2.3    | Kinetic Equations                                                  | 109        |
| 6.2.3.1  | The Case of $T_{\text{eff}} = T$                                   | 111        |
| 6.2.4    | Magnon System with Bose Condensate                                 | 113        |

|                   |                                                                                                |            |
|-------------------|------------------------------------------------------------------------------------------------|------------|
| 6.2.5             | Magnetodipole Emission of Condensate                                                           | 114        |
| 6.3               | Fröhlich Coherence                                                                             | 115        |
| 6.4               | Discussion                                                                                     | 118        |
| <b>7</b>          | <b>Magnons in an Ultrathin Film</b>                                                            | <b>119</b> |
| 7.1               | Model                                                                                          | 120        |
| 7.1.1             | Magnetic Energy                                                                                | 121        |
| 7.2               | Magnons                                                                                        | 122        |
| 7.2.1             | Magnon Interactions                                                                            | 124        |
| 7.2.2             | Effective Four-Magnon Interactions                                                             | 125        |
| 7.3               | Example                                                                                        | 126        |
| 7.4               | Discussion                                                                                     | 129        |
| <b>8</b>          | <b>Collective Magnetic Dynamics in Nanoparticles</b>                                           | <b>131</b> |
| 8.1               | Long-Lived States in a Cluster of Coupled Nuclear Spins                                        | 134        |
| 8.2               | Electronic Spins                                                                               | 136        |
| 8.3               | Spin-Echo Logic Operations                                                                     | 138        |
| <b>Appendix A</b> | <b>Harmonic Oscillator in Quantum Mechanics</b>                                                | <b>143</b> |
| A.1               | Operators of Creation and Annihilation                                                         | 143        |
| A.1.1             | Uncertainty Principle                                                                          | 144        |
| A.1.2             | Coherent States and Uncertainties                                                              | 145        |
| <b>Appendix B</b> | <b>Dipolar Sums</b>                                                                            | <b>147</b> |
| <b>Appendix C</b> | <b>Unitary Transformations in Weakly Nonideal Bose Gases</b>                                   | <b>151</b> |
| C.1               | One-Component Bose Gas                                                                         | 152        |
| C.1.1             | Three-Boson Annihilation                                                                       | 154        |
| C.1.2             | The Confluence and Decay Processes                                                             | 155        |
| C.2               | Two-Component Bose Gas                                                                         | 156        |
| C.3               | Concluding Remarks                                                                             | 158        |
| <b>Appendix D</b> | <b>Magnetization Dynamic Equation</b>                                                          | <b>159</b> |
| <b>Appendix E</b> | <b>A Parametric Pair Single-Mode Realization</b>                                               | <b>163</b> |
| E.1               | A Single-Mode Representation                                                                   | 164        |
| E.2               | Example                                                                                        | 166        |
| <b>Appendix F</b> | <b>Small Signal Amplification and Preventive Alarm Near the Onset of a Dynamic Instability</b> | <b>167</b> |
| <b>Appendix G</b> | <b>Noisy Pumping of Coherent Parametric Pairs</b>                                              | <b>173</b> |
