Contents

1 **Introduction** 1
1.1 The Finite Element Method at a Glance 1
1.2 Foundations of Modeling 2
Reference 4

2 **Motivation for the Finite Element Method** 5
2.1 From the Engineering Perspective Derived Methods 5
2.1.1 The Matrix Stiffness Method 6
2.1.2 Transition to the Continuum 11
2.2 Integral Principles 16
2.3 Weighted Residual Method 18
2.3.1 Procedure on Basis of the Inner Product 19
2.3.2 Procedure on Basis of the Weak Formulation 23
2.3.3 Procedure on Basis of the Inverse Formulation 25
2.4 Sample Problems 25
References 32

3 **Bar Element** 33
3.1 Basic Description of the Bar Element 33
3.2 The Finite Element Tension Bar 35
3.2.1 Derivation Through Potential 39
3.2.2 Derivation Through Castigliano's Theorem 40
3.2.3 Derivation Through the Weighted Residual Method 41
3.3 Sample Problems and Supplementary Problems 45
3.3.1 Sample Problems 45
3.3.2 Supplementary Problems 49
References 50

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4 Torsion Bar 51
4.1 Basic Description of the Torsion Bar 51
4.2 The Finite Element Torsion Bar 54
References 56

5 Bending Element 57
5.1 Introductory Remarks 57
5.2 Basic Description of the Beam 59
5.2.1 Kinematics 59
5.2.2 Equilibrium 64
5.2.3 Constitutive Equation 65
5.2.4 Differential Equation of the Bending Line 69
5.2.5 Analytical Solutions 69
5.3 The Finite Element Method of Plane Bending Beams 74
5.3.1 Derivation Through Potential 79
5.3.2 Weighted Residual Method 82
5.3.3 Comments on the Derivation of the Shape Functions 85
5.4 The Finite Element Bending Beam with two Deformation Planes 87
5.5 Transformation Within the Plane 89
5.6 Transformation Within the Space 92
5.7 Determination of Equivalent Nodal Loads 95
5.8 Sample Problems and Supplementary Problems 100
5.8.1 Sample Problems 100
5.8.2 Supplementary Problems 108
References 110

6 General 1D Element 111
6.1 Superposition to a General 1D Element 111
6.1.1 Sample 1: Bar Under Tension and Torsion 113
6.1.2 Sample 2: Beam in the Plane with Tension Part 114
6.2 Coordinate Transformation 115
6.2.1 Plane Structures 117
6.2.2 General Three-Dimensional Structures 118
6.3 Numerical Integration of a Finite Element 121
6.4 Shape Function 123
6.5 Unit Domain 126
6.6 Supplementary Problems 127
References 127

7 Plane and Spatial Frame Structures 129
7.1 Assembly of the Total Stiffness Relation 129
7.2 Solving of the System Equation 133

7.3 Solution Evaluation . . . 134
7.4 Examples in the Plane . . . 135
7.4.1 Plane Structure with Two Bars . . . 135
7.4.2 Plane Structure: Beam and Bar . . . 139
7.5 Examples in the Three-Dimensional Space . . . 145
7.6 Supplementary Problems . . . 152
References . . . 153

8 Beam with Shear Contribution . . . 155
8.1 Introductory Remarks . . . 155
8.2 Basic Description of the Beam with Shear Contribution . . . 160
8.2.1 Kinematics . . . 160
8.2.2 Equilibrium . . . 162
8.2.3 Constitutive Equation . . . 162
8.2.4 Differential Equation of the Bending Line . . . 163
8.2.5 Analytical Solutions . . . 164
8.3 The Finite Element of Plane Bending Beams with Shear Contribution . . . 168
8.3.1 Derivation Through Potential . . . 169
8.3.2 Derivation Through the Castigliano's Theorem . . . 174
8.3.3 Derivation Through the Weighted Residual Method . . . 175
8.3.4 Linear Shape Functions for the Deflection and Displacement Field . . . 179
8.3.5 Higher-Order Shape Functions for the Beam with Shear Contribution . . . 191
8.4 Sample Problems and Supplementary Problems . . . 196
8.4.1 Sample Problems . . . 196
8.4.2 Supplementary Problems . . . 205
References . . . 207

9 Beams of Composite Materials . . . 209
9.1 Composite Materials . . . 209
9.2 Anisotropic Material Behavior . . . 210
9.2.1 Special Symmetries . . . 212
9.2.2 Engineering Constants . . . 214
9.2.3 Transformation Behavior . . . 216
9.2.4 Plane Stress States . . . 218
9.3 *Introduction to the Micromechanics of the Fiber* Composite Materials . . . 222
9.4 Multilayer Composite . . . 224
9.4.1 One Layer in the Composite . . . 224
9.4.2 The Multilayer Composite . . . 226

9.5 A Finite Element Formulation 227
9.5.1 The Composite Bar 228
9.5.2 The Composite Beam 229
9.6 Sample Problems and Supplementary Problems 230
References 231

10 Nonlinear Elasticity 233
10.1 Introductory Remarks 233
10.2 Element Stiffness Matrix for Strain Dependent Elasticity 235
10.3 Solving of the Nonlinear System of Equations 241
10.3.1 Direct Iteration 241
10.3.2 Complete Newton–Raphson Method 244
10.3.3 Modified Newton–Raphson Method 257
10.3.4 Convergence Criteria 260
10.4 Sample Problems and Supplementary Problems 261
10.4.1 Sample Problems 261
10.4.2 Supplementary Problems 269
References 271

11 Plasticity 273
11.1 Continuum Mechanics Basics 273
11.1.1 Yield Condition 274
11.1.2 Flow Rule 276
11.1.3 Hardening Law 277
11.1.4 Elasto-Plastic Material Modulus 278
11.2 Integration of the Material Equations 279
11.3 Derivation of the Fully Implicit Backward-Euler Algorithm . . . 285
11.3.1 Mathematical Derivation 285
11.3.2 Interpretation as Convex Optimization Problem 290
11.4 Derivation of the Semi-Implicit Backward-Euler Algorithm 294
11.5 Sample Problems and Supplementary Problems 296
11.5.1 Sample Problems 296
11.5.2 Supplementary Problems 309
References 310

12 Stability (Buckling) 313
12.1 Stability for Bar/Beam 313
12.2 Large Deformations 315
12.3 Stiffness Matrices in Large Deformations 317
12.3.1 Bar with Large Deformations 318
12.3.2 Beams with Large Deformations 319
12.4 Examples of Buckling: The Four Euler's Buckling Loads 321
12.4.1 Analytical Solutions for Euler's Buckling Loads 322

12.4.2 The Finite Element Method 323
12.5 Supplementary Problems 324
References 324

13 Dynamics 327
13.1 Principles of Linear Dynamics 327
13.2 The Mass Matrices 330
13.3 Modal Analysis 330
13.4 Forced Oscillation, Periodic Load 332
13.5 Direct Methods of Integration, Transient Analysis 333
13.5.1 Integration According to Newmark 334
13.5.2 Central Difference Method 335
13.6 Examples 337
13.6.1 Provision of Mass and Stiffness Matrices 337
13.6.2 Axial Vibration of a Bar 341
13.7 Supplementary Problems 357
References 358

Appendix A 359

Short Solutions of the Exercises 375
