1	Introduction	1
	References	6
2	Mathematical Models of Flow in Porous Media	9
2.1	Fundamental Concepts	10
2.1.1	Wettability and Capillarity	10
2.1.2	Volume Fractions and Saturations	13
2.1.3	Fluid Potentials	14
2.1.4	Capillary Function	16
2.1.5	Darcy Equation	21
2.1.6	Relative Permeability Functions	23
2.1.7	Density and Viscosity of Fluids	26
2.2	Governing Equations for Fluid Flow	27
2.2.1	Two-Phase Flow	27
2.2.2	Richards Equation	30
2.2.3	Single-Phase Flow	35
2.3	Auxiliary Conditions	36
2.3.1	Initial Conditions	36
2.3.2	Boundary Conditions	39
2.3.3	Conditions at Material Interfaces	41
	References	44
3	Numerical Solution of Flow Equations	49
3.1	Basic Properties of Numerical Discretization Schemes	50
3.2	Spatial Discretization	53
3.2.1	Finite Difference Method	53
3.2.2	Finite Element Method	57
3.2.3	Cell-Centred Finite Volume Method	66
3.2.4	Vertex-Centred Finite Volume Method	70

3.3	Solution of Semi-Discrete Equations	75
3.3.1	Discretization in Time	75
3.3.2	Linearization	77
3.3.3	Selection of Time Step Size	84
3.3.4	Solution of Linear Systems	85
	References	86
4	Computation of Inter-Nodal Permeabilities for Richards Equation	91
4.1	Overview of Averaging Approaches for One-Dimensional Flow	91
4.1.1	Simple Averaging Methods	92
4.1.2	Direction Dependent Methods	94
4.1.3	Darcian Means	96
4.2	Improved Approximation Scheme	100
4.2.1	Infiltration	102
4.2.2	Drainage	105
4.2.3	Capillary Rise	107
4.2.4	Implementation Issues	109
4.2.5	Evaluation for Steady Flow	110
4.2.6	Evaluation for Unsteady Flow	114
4.3	Saturated–Unsaturated Transition	118
4.4	Heterogeneous Medium	120
4.5	Multidimensional Problems	129
4.6	Two-Phase Flow	133
	References	136
5	Upscaling from Darcy Scale to Field Scale	139
5.1	Heterogeneity Patterns	140
5.2	Overview of Upscaling Approaches	142
5.3	Permeability Upscaling for Steady Single-Phase Flow	145
5.3.1	Algebraic Averaging	146
5.3.2	Effective Medium Theory	149
5.3.3	Direct Solution of Steady Flow Equation	153
5.4	Upscaling of Transient Two-Phase Flow	160
5.4.1	Local Equilibrium and Quasi Steady-State Models	160
5.4.2	Local Non-Equilibrium Models	164
	References	170
