

Table of Contents

Introduction	1	Genes and Mutation	80
Chronology	18	Mutations Due to Base Modifications .	82
Important Advances that Contributed		Mutations Due to Errors in Replication	84
to the Development of Genetics	18	Processing of DNA	86
Fundamentals	25	DNA Repair Systems	86
Prologue	26	Recombination	88
Phylogenetic Tree of Living Organisms	26	Transposition	90
Origins of Humans	28	Trinucleotide Repeat Expansion	92
Out of Africa: Toward Modern		Eukaryotic Cells	94
Humans	30	Cell Communication	94
Molecular Basis of Genetics	32	Haploid and Diploid Yeast Cells	96
The Cell and its Components	32	Mating Type Determination in Yeast	
Some Types of Chemical Bonds	34	Cells and Yeast Two-Hybrid System ..	98
Carbohydrates	36	Cell Division: Mitosis	100
Lipids (Fatty Acids)	38	Meiosis in Germ Cells	102
Nucleotides and Nucleic Acids	40	Meiosis Prophase I	104
Amino Acids	42	Formation of Gametes	106
Proteins	44	Cell Cycle Control	108
DNA as a Carrier of Genetic		Programmed Cell Death	110
Information	46	Cultured Cells	112
DNA and its Components	48	Formal Genetics	114
DNA Structure	50	The Mendelian Traits	114
Alternative DNA Structures	52	Transmission to the Next Generation .	116
DNA Replication	54	Independent Distribution	118
The Flow of Genetic Information:		Phenotype and Genotype	120
Transcription and Translation	56	Segregation of Parental Genotypes ...	122
Genetic Code	58	Monogenic Inheritance	124
Eukaryotic Gene Structure	60	Genetic Linkage and Recombination .	126
Analysis of DNA	62	Genetic Linkage and Association	
Restriction Enzymes	62	Analysis	128
DNA Amplification by Polymerase		Quantitative Differences in Genetic	
Chain Reaction (PCR)	64	Traits	130
DNA Sequencing	66	Polygenic Threshold Model	132
Parallel DNA Sequencing	68	Allelic Distribution in a Population ..	134
DNA Cloning	70	Hardy-Weinberg Equilibrium	
cDNA Cloning	72	Principle	136
DNA Libraries	74	Geographical Differences in Allelic	
Southern Blot Hybridization	76	Distribution	138
Variability of DNA	78	Inbreeding	140
DNA Polymorphism	78	Twins	142
		Chromosomes	144
		Chromosomes in Metaphase	144
		Visible Functional Structures of	
		Chromosomes	146

Chromosome Organization	148	Genomics	217
Functional Elements of Chromosomes	150	Genomics	218
DNA and Nucleosomes	152	Genomics, the Study of the	
DNA in Chromosomes	154	Organization of Genomes	218
The Telomere	156	Identification of Disease-related	
The Banding Patterns of Human		Genes	220
Chromosomes	158	Genomes of Microorganisms	222
Karyotype of Man and Mouse	160	Architecture of the Human Genome ..	224
Preparation of Metaphase		Genome Analysis with DNA	
Chromosomes for Analysis	162	Microarrays	226
Fluorescence In-Situ Hybridization		Genome Scan and Array CGH	228
(FISH)	164	Comparative Genomic Hybridization ..	230
Multicolor FISH Identification of		Genome-Wide Association Study	
Chromosomes	166	(GWAS)	232
Aneuploidy	168	The Dynamic Genome: Mobile Genetic	
Chromosome Translocation	170	Elements	234
Structural Chromosomal Aberrations ..	172	Evolution of Genes and Genomes	236
Regulation of Gene Function	174	Comparative Genomics	238
Ribosomal RNA and Protein Assembly		Genomic Structure of the Human X	
Transcription	176	and Y Chromosomes	240
Basic Principles of Gene Control	178	Genomic Disorders	242
Regulation of Gene Expression in		The Mitochondrial Genome of Man ..	244
Eukaryotes	180		
DNA-Protein Interaction	182	Genetics and Medicine	247
Transcription Activation	184	Imbalanced Homeostasis	248
RNA Interference (RNAi)	186	Chloride Channel Defects: Cystic	
Targeted Gene Disruption	188	Fibrosis	248
Epigenetic Modifications	190	Genetic Defects in Ion Channels: LQT	
DNA Methylation	190	Syndromes	250
Reversible Changes in Chromatin		α_1 -Antitrypsin Deficiency	252
Structure	192	Hemophilia A and B	254
Genomic Imprinting	194	von Willebrand Bleeding Disease	256
Mammalian X Chromosome		Pharmacogenetics	258
Inactivation	196	Cytochrome P450 (CYP) Genes	260
Genetic Signal Pathways	198	Mitochondrial Diseases	262
Cellular Signal Transduction	198	Metabolic Disorders	264
Heterotrimeric G Proteins	200	Diabetes Mellitus	264
TGF β and Wnt/ β -Catenin Signaling		Amino Acid Degradation and Urea	
Pathways	202	Cycle Disorders	266
The Hedgehog and TNF α Signal		Cholesterol Biosynthesis Pathway	268
Transduction Pathways	204	Distal Cholesterol Biosynthesis	
The Notch/Delta Signaling Pathway ..	206	Pathway	270
Genes in Embryonic Development	208	Familial Hypercholesterolemia	272
Embryonic Development Genes in		LDL Receptor Mutations	274
<i>Drosophila melanogaster</i>	208	Lysosomal Disorders	276
Hox Genes	210	Lysosomal Enzyme Defects	278
Zebrafish: A Translucent Vertebrate ..	212	Mucopolysaccharide Storage Diseases	280
Cell Lineage in a Nematode,		Peroxisomal Disorders	282
<i>C. elegans</i>	214		

Immune System	284	Sex Determination and Differentiation ..	356
Components of the Immune System ..	284	Mammalian Sex Determination	356
Immunoglobulin Molecules	286	Sex Differentiation	358
Generation of Antibody Diversity	288	Disorders of Sexual Development	360
Immunoglobulin Gene		Congenital Adrenal Hyperplasia	362
Rearrangement	290	Atypical Patterns of Genetic	
T-cell Receptor	292	Transmission	364
The MHC Region	294	Unstable Repeat Expansion	364
Evolution of the Immunoglobulin		Fragile X Syndrome	366
Super Family	296	Imprinting Disorders	368
Primary Immunodeficiency Diseases ..	298	Sensory Perception	370
Origins of Cancer	300	Rhodopsin, a Photoreceptor	370
Genetic Causes of Cancer: Background	300	Pigmentary Retinal Degeneration	372
Categories of Cancer Genes	302	Color Vision	374
Cancer Genomes	304	Auditory System	376
The p53 Tumor Suppressor Gene	306	Odorant Receptors	378
The APC Gene and Polyposis coli	308	Mammalian Taste Receptors	380
Breast and Ovarian Cancer		Karyotype-Phenotype Relationship	382
Susceptibility Genes	310	Autosomal Trisomies	382
Oncogenic Chromosome		Triploidy, Monosomy X, Additional X	
Translocation	312	or Y Chromosome	384
Retinoblastoma	314	Microdeletion Syndromes	386
Neurofibromatosis	316	A Brief Guide to Genetic Diagnosis	388
Genomic Instability Diseases	318	Principles of Genetic Diagnostics	388
DNA Excision Repair Disorders	320	Segregation Analysis with Linked	
Impaired Cell and Tissue Structure	322	Genetic Markers	390
Cytoskeletal Proteins in Erythrocytes	322	Indirect DNA Analysis	392
Hereditary Muscle Diseases	324	Detection of Mutations without	
Duchenne Muscular Dystrophy	326	Sequencing	394
FGF Receptor Mutations in Skeletal		Gene and Stem Cell Therapy	396
Dysplasias	328	Morbid Anatomy of the Human Genome	398
Marfan and Loeys-Dietz Syndromes ..	330	Chromosomal Locations of Human	
Collagen Molecules	332	Genetic Diseases	398
Osteogenesis Imperfecta	334	Chromosomal Locations—	
Molecular Basis of Bone Development	336	Alphabetical List	404
Ciliopathies	338		
Neurocristopathies	340	Appendix	
Dysregulated RAS-MAPK Signaling		Supplementary Data	409
Pathway	342		
Hemoglobin Disorders	344	Glossary	425
Hemoglobin	344	Picture Credits	451
Hemoglobin Genes	346	Index	453
Sickle Cell Disease	348		
Mutations in Globin Genes	350		
The Thalassemias	352		
Hereditary Persistence of Fetal			
Hemoglobin (HFPFH)	354
