Author Index	xv
1.1 The Solar Refinery	1
<i>Robert Schlögl</i>	
1.1.1 Introduction	1
1.1.2 The Role of Chemistry in the Energy Challenge	5
1.1.3 Chemical Reactions and Catalysis	7
1.1.4 The Design of Catalysts and Processes	16
1.1.5 The Biological Origin of Our Present Energy System	17
1.1.6 Chemical Energy Storage: One Long-Term Solution	20
1.1.7 References	30
1.2 Energy Storage Strategies	35
<i>Ferdi Schüth</i>	
1.2.1 Introduction	35
1.2.2 General Considerations	35
1.2.3 Heat (Cold) Storage	37
1.2.4 Grid-Scale Storage of Electrical Energy	39
1.2.4.1 Storage on the Transmission Grid Scale	40
1.2.4.2 Storage on Distribution and Medium-Voltage Grid Scale	43
1.2.5 Energy Storage for Mobile Applications	44
1.2.5.1 Chemical Compounds	45
1.2.5.2 Traction Batteries	46
1.2.6 Systems Considerations	47
1.3 Energy and Society: A Practical Guide	49
<i>Gerhard Hofmann</i>	
1.3.1 Notes	57
1.3.2 References	57
2.1 Biofuels Derived from Renewable Feedstocks	59
<i>Regina Palkovits and William R. H. Wright</i>	
2.1.1 Introduction	59

vi	Contents	
2.1.2	Sources of Biomass	59
2.1.3	Lignocellulose as Feedstock	62
2.1.4	Bioethanol as Sustainable Biofuel	63
2.1.5	Biodiesel as Potential Biofuel	66
2.1.6	Production of Biofuel via Chemical Transformations of Lignocellulose	68
2.1.7	Controlled Transformations of Carbohydrates into Hydrocarbon Fuels	72
2.1.8	Controlled Transformations of Carbohydrates into Novel Biofuels	76
2.1.8.1	Transformations Based on LA	77
2.1.8.2	Biofuel Compounds Based on 5-HMF	79
2.1.9	Controlled Transformations of Lignin into Potential Fuel Compounds	81
2.1.10	Summary	82
2.1.11	Acknowledgment	82
2.1.12	References	82
2.2	Biomass Conversion to Chemicals <i>Armin Brandner and Peter Claus</i>	87
2.2.1	Introduction	87
2.2.2	Classification of Biomass	88
2.2.2.1	Lignocellulose	89
2.2.2.2	Lipids	94
2.2.2.3	Proteins	98
2.2.3	Selected Key Chemicals	98
2.2.3.1	Cellulose	98
2.2.3.2	Glycerol	99
2.2.4	Technologies and Requirements for Chemical Production from Biomass	103
2.2.5	Economic Considerations	104
2.2.6	Outlook	105
2.2.7	References	105
2.3	Thermal Conversion of Biomass <i>Nikolai DeMartini, Atte Aho, Mikko Hupa, and Dmitry Yu. Murzin</i>	109
2.3.1	Torrefaction	112
2.3.2	Pyrolysis	112
2.3.2.1	Introduction	112
2.3.2.2	Pyrolysis Reactors	113
2.3.2.3	Biomass	114
2.3.2.4	Composition of Bio-Oil	114

2.3.2.5	Utilization of Bio-Oil	115
2.3.2.6	Upgrading of Bio-Oil	115
2.3.3	Gasification	116
2.3.3.1	Introduction.	116
2.3.3.2	Gasification Reactors	117
2.3.3.3	Energy in Gasification.	118
2.3.4	Combustion	118
2.3.4.1	Introduction.	118
2.3.4.2	Energy in Combustion	119
2.3.4.3	Co-combustion.	119
2.3.5	Summary.	120
2.3.6	References	121
2.4	Biomass to Mineralized Carbon: Energy Generation and/or Carbon Sequestration.	125
	<i>Markus Antonietti</i>	
2.4.1	Introduction.	125
2.4.2	HTC	126
2.4.2.1	HTC of Biomass Waste for Environmentally Friendly Carbon Sequestration	126
2.4.2.2	HTC for “Carbon-Negative Materials”.	127
2.4.3	Mineralized Biomass as Energy Carrier.	129
2.4.3.1	“Biocoal” and Its Comparison to Other Biofuels, Biogas and Bioethanol . . .	129
2.4.3.2	Carbon Fuel Cells	132
2.4.4	Discussion and Conclusion	133
2.4.5	References	133
3.1	Electrochemical Concepts: A Practical Guide	135
	<i>Karl Doblhofer</i>	
3.1.1	Introduction.	135
3.1.2	Electrodes in Electrolytes.	137
3.1.3	Energetics of Electrode Reactions.	138
3.1.4	The Electrochemical Cell.	140
3.1.4.1	The Concept	140
3.1.4.2	Chemical and Electric Energy	142
3.1.4.3	The Maximum Electric Energy Produced and the Equilibrium Cell Voltage.	144
3.1.5	Concentration Dependence of E : The Nernst Equation.	145
3.1.5.1	The Nernst Equation	145
3.1.5.2	Concentration Cells	147

3.1.6	The Temperature Dependence of the Equilibrium Cell Voltage, E	148
3.1.7	Conclusion.	148
3.1.8	Acknowledgment	149
3.1.9	References	150
3.2	Water-Splitting Conceptual Approach	151
	<i>Jan Rossmeisl</i>	
3.2.1	Introduction.	151
3.2.2	Fundamentals	151
3.2.3	Standard (Reversible) Hydrogen Electrode	152
3.2.4	The Cathode Half-Cell Reaction	153
3.2.5	The Anode Half-Cell Reaction.	154
3.2.5.1	Free Energy Diagram	155
3.2.5.2	Tafel Equation and ΔG^{OER}	156
3.2.5.3	Scaling Relations	158
3.2.5.4	Universal Scaling and Trends in Activity	159
3.2.6	Conclusion.	161
3.2.7	References	161
3.3	Fuel Cells.	163
	<i>Peter Strasser</i>	
3.3.1	What Is a Fuel Cell?.	164
3.3.2	Components of a Fuel Cell	165
3.3.3	Performance Characteristics of a Fuel Cell	170
3.3.4	The Electrocatalysis of Oxygen Reduction at Fuel Cell Cathodes	173
3.3.4.1	Understanding the Electrode Potential Dependence of the ORR	173
3.3.4.2	Understanding and Predicting Trends in ORR Activity on Transition-Metal Catalysts	174
3.3.4.3	Nanostructured Pt Core-Shell Electrocatalysts for the ORR	177
3.3.4.4	Noble-Metal-Free ORR PEMFC Electrocatalysts	182
3.3.5	Conclusions	182
3.3.6	Acknowledgments.	183
3.3.7	References	183
3.4	Molecular Concepts of Water Splitting: Nature's Approach	185
	<i>Nicholas Cox and Wolfgang Lubitz</i>	
3.4.1	Introduction.	185

3.4.2	Water Oxidation.	187
3.4.2.1	PSII	187
3.4.2.2	Geometric Structure of the WOC.	190
3.4.2.3	Electronic Structure of the WOC	192
3.4.2.4	Function of the WOC.	194
3.4.2.5	Suggested Mechanisms of O–O Bond Formation	195
3.4.2.6	Summary: Principles of Photosynthetic Water Splitting.	197
3.4.2.7	Current Water-Splitting Catalysts.	198
3.4.3	Hydrogen Production and Conversion	199
3.4.3.1	Classification of Hydrogenases.	200
3.4.3.2	Structure of [NiFe] and [FeFe] Hydrogenases	200
3.4.3.3	Intermediate States and Reaction Mechanisms.	203
3.4.3.4	Oxygen Sensitivity and Tolerance.	209
3.4.3.5	Design Principles of Hydrogenases	210
3.4.3.6	Molecular Catalysts for H ₂ Conversion and Production	211
3.4.4	Conclusions	213
3.4.5	Acknowledgments.	214
3.4.6	Notes	214
3.4.7	References	215
3.5	Batteries: Concepts and Systems	225
	<i>Dominik Samuelis and Joachim Maier</i>	
3.5.1	Introduction.	225
3.5.2	Secondary Battery Systems	228
3.5.3	Lithium Batteries	232
3.5.4	Thermodynamics of Electrochemical Energy Storage	236
3.5.5	Kinetics of Energy Storage	239
3.5.6	Materials Optimization: Adjusting Screws.	240
3.5.7	Outlook.	244
3.5.8	Acknowledgments.	244
3.5.9	Note	245
3.5.10	References	245
4.1	Chemical Kinetics: A Practical Guide	249
	<i>Sebastian Arndt and Reinhard Schomäcker</i>	
4.1.1	Theory	249
4.1.1.1	Introduction.	249
4.1.1.2	Course of a Catalytic Reaction	249
4.1.1.3	Reaction Kinetics.	251

4.1.2	Practical Aspects	258
4.1.2.1	Laboratory Reactors.	258
4.1.2.2	Preliminary Tests	258
4.1.2.3	Comparative Studies.	259
4.1.2.4	Development of Kinetic Models.	260
4.1.3	Examples.	264
4.1.3.1	Oxidative Coupling of Methane	264
4.1.3.2	Decomposition of Ammonia	267
4.1.3.3	Slurry Reaction	270
4.1.4	Notes	273
4.1.5	Acknowledgment	274
4.1.6	Abbreviations.	274
4.1.7	References	275
4.2	Synthesis of Solid Catalysts	277
	<i>Annette Trunschke</i>	
4.2.1	Macroscopic Catalyst Bodies	280
4.2.2	The Active Phase	285
4.2.3	Dispersed Surface Species	296
4.2.4	Final Remarks	300
4.2.5	Acknowledgments.	301
4.2.6	References	301
