Preface XI

List of Contributors XV

1	Low-Dimensional Antiferromagnetic Oxides : An Overview	1
	<i>Marco Finazzi, Lamberto Duò, and Franco Ciccacci</i>	
1.1	Introduction	1
1.2	Finite-Size Effects on the Magnetic Ordering Temperature	2
1.3	AFM Anisotropy	6
1.3.1	Magnetocrystal Anisotropy	7
1.3.2	Dipolar Anisotropy	7
1.4	Interlayer Coupling in AFM–FM Bilayers and Multilayers	9
1.4.1	AFM–FM Interface Coupling	9
1.4.2	Coupling between FM Layers Separated by an AFM Oxide Spacer	12
1.5	Micromagnetic Structure at AFM–FM Interfaces	14
1.6	Applications	17
1.7	Conclusions	18
	References	18
2	Growth of Antiferromagnetic Oxide Thin Films	25
	<i>Sergio Valeri, Salvatore Altieri, and Paola Luches</i>	
2.1	Introduction	25
2.2	Nickel Oxide	29
2.2.1	Ultrathin NiO Layers	29
2.2.2	Thick NiO Films	35
2.3	Cobalt Oxide	40
2.3.1	Ultrathin CoO Layers	40
2.3.2	Thick CoO Films	43
2.4	Other Oxides	47
2.4.1	MnO(001)	47
2.4.2	FeO	48
2.4.3	α -Fe ₂ O ₃	50

2.5	Oxide–Substrate Interface	53
2.6	Polar-Oxide Surfaces	56
2.7	Conclusions and Perspectives	58
	Acknowledgments	60
	References	61
3	Dichroism in X-ray Absorption for the Study of Antiferromagnetic Materials	69
	<i>Jan Vogel and Maurizio Sacchi</i>	
3.1	X-ray Absorption and X-ray Dichroism	70
3.1.1	X-ray Magnetic Circular Dichroism in the One-Electron Approximation	71
3.1.1.1	Spin-Orbit Coupling in the <i>d</i> -Band	73
3.1.1.2	Core-Hole and Other Many-Body Effects	73
3.1.2	XMCD in the Strongly Correlated Limit: Multiplet Effects	75
3.1.2.1	Ligand Field Atomic Multiplet Calculations	76
3.1.2.2	Charge-Transfer Effects	77
3.2	Sum Rules for X-ray Dichroism	78
3.2.1	Orbital Moment	78
3.2.2	Spin Moment	79
3.2.3	Sum Rule for Linear Dichroism	80
3.3	Experimental Determination of X-ray Absorption	81
3.4	Linear X-ray Dichroism in Rare-Earth Compounds	83
3.4.1	Fe _x Tb _{1-x} Amorphous Thin Films	84
3.5	Magnetic Dichroism in TM Oxides	86
3.5.1	Magnetic Linear Dichroism in Thin NiO Films on MgO	86
3.5.1.1	Calculations	87
3.5.1.2	Sample Preparation	89
3.5.1.3	Experiment	89
3.5.1.4	Results	89
3.6	Conclusions	93
	References	94
4	Antiferromagnetic Oxide Films on Nonmagnetic Substrates	99
	<i>Tjipke Hibma and Maurits W. Haverkort</i>	
4.1	Introduction	99
4.2	Electronic Structure of TM Oxides	100
4.2.1	Mott-Hubbard and Charge Transfer Insulators	100
4.2.2	Ligand Field Theory	101
4.2.2.1	Independent Electron Ligand Field Theory	101
4.2.2.2	Multiplet Ligand Field Theory	103
4.2.3	Spin–Orbit Coupling in Cubic Symmetry	103
4.2.3.1	Single Electron in an Open <i>t</i> _{2g} Shell	104
4.2.3.2	<i>d</i> ⁶ and <i>d</i> ⁷ Configurations	105
4.3	Magnetic Structure	106

4.3.1	Magnetic Ordering of MnO, FeO, CoO and NiO	106
4.3.1.1	MnO and NiO	107
4.3.1.2	FeO and CoO	107
4.4	X-ray Absorption Spectroscopy	108
4.4.1	Magnetic Linear Dichroism	110
4.5	Strain	115
4.6	Linear Dichroism Results for AF TM Monoxide Layers	120
4.6.1	XMLD of Epitaxial NiO(100)/MgO layers	120
4.6.2	Ligand-Field-Induced Linear Dichroism in Strained NiO/Ag(100) Layers	122
4.6.3	Isotropic XAS of CoO	125
4.6.4	Linear Dichroism of Strained CoO Layers	127
4.6.5	Spin Alignment in Strained CoO	131
4.6.6	Electronic Structure of Strained CoO	132
4.6.7	Strain-Induced Linear Dichroism in MnO Layers	133
4.7	Conclusions	137
	Appendix: Polarization and Spin Direction Dependence of the Linear Dichroism in Nonspherical Symmetry	137
	References	140
5	Exchange Bias by Antiferromagnetic Oxides	143
	<i>Marian Fecioru-Morariu, Ulrich Nowak, and Gernot Güntherodt</i>	
5.1	Introduction	143
5.2	Theoretical Background	145
5.2.1	Diluted Antiferromagnets in a Magnetic Field	145
5.2.2	Domain-State Model for Exchange Bias	148
5.2.3	Mean-Field Solution of the Domain-State Model	149
5.3	Experiments	156
5.3.1	Antiferromagnetic Oxides: CoO, Co _{1-y} , Co _{1-x} Mg _x O	156
5.3.2	Exchange Bias between the Ferromagnet Co and the Diluted Antiferromagnet CoO	161
5.3.2.1	Nonmagnetic Dilution of the Antiferromagnet	162
5.3.2.2	Hysteresis Curves and Uncompensated Magnetic Moments (Vertical Shift)	164
5.3.2.3	Substitutional versus Structural Defects	165
5.3.2.4	Temperature Dependence	167
5.3.2.5	Thermoremanent Magnetization and Training Effect	170
5.3.2.6	Cooling-Field Dependence	173
5.3.2.7	Antiferromagnetic Thickness Dependence	174
5.3.2.8	Blocking Temperature Distribution	175
5.4	Model Calculations	178
5.4.1	Modeling of Experimental Data	178
5.4.2	Anisotropy Dependence	181
5.4.3	Structural Dependence	183

5.5	Conclusions	186
	References	187
6	Theory of Ferromagnetic–Antiferromagnetic Interface Coupling	191
	<i>Alexander I. Morosov and Alexander S. Sigov</i>	
6.1	Introduction	191
6.2	Frustrations on the Ferromagnet–Antiferromagnet Interface	192
6.2.1	Uncompensated Surface of the Antiferromagnet	192
6.2.2	Compensated Surface of the Antiferromagnet	194
6.3	Mathematical Model	195
6.4	The Interface between Thick Ferromagnet–Antiferromagnet Layers	196
6.4.1	Uncompensated Surface of the Antiferromagnet	197
6.4.1.1	$R \ll (\Delta_f, \Delta_{af})$	197
6.4.1.2	$R \gg (\Delta_f, \Delta_{af})$	200
6.4.2	Compensated Surface of the Antiferromagnet	201
6.5	A Thin Ferromagnetic (Antiferromagnetic) Layer on a Thick Antiferromagnetic (Ferromagnetic) Substrate	206
6.5.1	Uncompensated Surface of the Antiferromagnet	206
6.5.1.1	The Case of $\gamma_{af} \gg 1$	206
6.5.1.2	A Thin Layer with a Much Higher Exchange Rigidity	213
6.5.2	Compensated Surface of an Antiferromagnetic Substrate	218
6.6	Spin-Valve Ferromagnet–Antiferromagnet–Ferromagnet System	219
6.6.1	Domain Walls in a Three-Layer System	220
6.6.1.1	$\gamma_{f,af} a / \gamma_{af} \ll 1$	221
6.6.1.2	$\gamma_{f,af} a / \gamma_{af} \gg 1$	222
6.6.2	Phase Diagram	226
6.6.3	Matching Experimental Data?	233
6.7	Conclusion	236
	References	236
7	Antiferromagnetic–Ferromagnetic Oxide Multilayers: Fe_3O_4-Based Systems as a Model	239
	<i>P. J. van der Zaag and Julie A. Borchers</i>	
7.1	Introduction	239
7.2	Interface and Structural Effects	240
7.2.1	Chemical and Structural Quality Effects	242
7.2.2	Interface Effects on Magnetic Properties	244
7.2.2.1	Reduced Magnetization and “Dead” Layers at the Interface	244
7.2.2.2	Anisotropy and Interface Anisotropy of Thin Fe_3O_4 Layers	246
7.2.2.3	The Interface Structure: Antiphase Boundaries	250
7.3	Magnetic Coupling Studies	258
7.3.1	Antiferromagnetic Multilayers	258
7.3.1.1	AF–NM Multilayers: Finite-Size Scaling	258

7.3.1.2	AF–AF Multilayers: Exchange Coupling	261
7.3.2	Antiferromagnetic–Ferromagnetic Coupling	263
7.3.2.1	Exchange Anisotropy	263
7.3.2.2	Dependence on Antiferromagnetic Thickness	266
7.3.2.3	Perpendicular Coupling	269
7.3.2.4	Reduction of the Blocking Temperature	274
7.3.3	Coupling across Intermediary Layers	277
7.3.3.1	Coupling across a Nonmagnetic Layer	277
7.3.3.2	Coupling across an Antiferromagnetic Layer	281
7.3.4	Perpendicular Anisotropy	283
7.4	Properties of Coupled Systems	285
7.4.1	Magnetoresistance Effects	285
7.4.1.1	Tunnel Junctions using Fe_3O_4 – MgO	286
7.4.1.2	Tunnel Junctions using Fe_3O_4 – AlO_x	287
7.4.1.3	Tunnel Junctions using Fe_3O_4 –oxide–LSMO	287
7.4.1.4	Tunnel Junctions using a CoFe_2O_4 Spin Filter	288
7.4.2	Magneto-optical Effects	289
7.5	Conclusions and Outlook	290
	Acknowledgments	291
	References	291
8	Micromagnetic Structure – Imaging Antiferromagnetic Domains using Soft X-Ray Microscopy	301
	<i>Hendrik Ohldag</i>	
8.1	Introduction	301
8.1.1	Origin of Antiferromagnetic Domains	302
8.1.2	Soft X-Ray Spectroscopy	306
8.1.3	Photoemission Electron Microscope	308
8.1.4	Soft X-Ray Dichroism	310
8.2	Antiferromagnetic Domain Imaging using PEEM	313
8.2.1	Imaging Antiferromagnetic Domains and Domain Walls	313
8.2.2	Magnetism and Crystallography	317
8.3	Antiferromagnetic Domains in Exchange-Coupled Systems	318
8.3.1	Antiferromagnetic–Ferromagnetic-Exchange Coupling	319
8.3.2	Magnetic Domains at Interfaces of Antiferromagnets with Ferromagnets	322
8.3.3	Origin of Spin Reorientation	327
8.4	Temperature Dependence of the Antiferromagnetic Domain Structure	329
8.5	Antiferromagnetic Domains and Exchange Bias	333
8.5.1	A Quick Look at a Fluoride	333
8.5.2	Magnetic Reversal Mechanism on the Microscopic Scale	335

8.6	Summary and Outlook	337
	References	338
	Index	341
