Preface *XI*

Color Plates *XIII*

1	Introduction	1
1.1	Exploring the Universe by Detecting Photons and Particles	1
1.2	Detectors of Photons and Charged Particles	3
1.2.1	Vacuum Detectors	4
1.2.2	Gaseous Detectors	8
1.2.3	Liquid Detectors	8
1.2.4	Solid-State Detectors	11
1.2.5	Combination of Imaging Detectors with Scintillators	15
1.2.6	Hybrid Imaging Detectors	17
1.2.6.1	Vacuum Hybrid Detectors	17
1.2.6.2	Gaseous Hybrid Detectors	18
1.2.6.3	Liquid Hybrid Detectors	18
	References	19
 2	 Basic Processes in Gaseous Detectors	 21
2.1	Interaction of Charged Particles and Photons with Matter	21
2.1.1	Ionization Energy Loss	21
2.1.2	Interaction of Photons with Matter	25
2.1.2.1	Interaction of Photons with Gases	26
2.1.2.2	Interaction of Photons with Liquids	32
2.1.2.3	Interaction of Photons with Metals and Other Solid Materials	34
2.2	Drift of Electrons and Ions in Gases	38
2.2.1	Drift of Electrons	38
2.2.2	Drift of Ions	41
2.3	Some remarks on the Diffusion	42
2.3.1	Diffusion of Ions in Electric Fields	42
2.3.2	Diffusion of Electrons in Electric Fields	42
2.3.3	Drift and Diffusion of Electrons Moving in Electric and Magnetic Fields	44

2.4	Avalanche Multiplication in Gases	45
	References	50
3	Traditional Position-Sensitive Gaseous Detectors and Their Historical Development: from the Geiger Counter to the Multi-wire Proportional Chamber (1905 till 1968)	53
3.1	Geiger and Spark Counters	54
3.1.1	Single-Wire Counters	54
3.1.1.1	Geiger Counters	56
3.1.2	Proportional Counters	60
3.1.2.1	Energy Resolution	60
3.1.2.2	Position Resolution	63
3.1.3	Physics Processes in Single-wire Counters	66
3.1.4	A Peculiar Type of Proportional Counter: the Gas Scintillation Counter	71
3.2	Parallel-Plate Spark and Streamer Detectors	76
3.2.1	Spark Counters	76
3.2.2	Streamer Chambers	80
3.3	Further Developments: Pulsed High frequency Detectors	81
	References	82
4	The Multi Wire Proportional Chamber Era	85
	References	90
5	More in Depth about Gaseous Detectors	91
5.1	Pulse-Shape Formation in Gaseous Detectors in Absence of Secondary Effects	91
5.1.1	Parallel-Plate Geometry	91
5.1.2	Cylindrical Geometry	93
5.1.3	MWPC Geometry	95
5.2	Townsend Avalanches and Secondary Processes	99
5.2.1	Role of Photon Emission	99
5.2.1.1	Emission Spectra	99
5.2.1.2	Photoeffect on the Cathode	104
5.2.1.3	Gas Photoionization	108
5.2.2	Role of the Positive Ions	113
5.2.2.1	Ion Recombination on the Cathode in Vacuum	114
5.2.2.2	Recombination on the Cathode in Gas	117
5.2.3	Role of Excited and Metastable Atoms	121
5.3	Discharges in Gaseous Detectors	124
5.3.1	Slow Breakdown	125
5.3.2	Fast Breakdown	127
5.3.3	Self-Quenched Streamers in Gas-Filled Wire Detectors	131
5.4	Features of Operation of Wire Detectors at High Counting Rates	136

5.5	Afterpulses and the Cathode-“Excitation” Effect	138
	References	143
6	New Ideas on Gaseous Detectors Conceived during the Early Years of the “Multi Wire Proportional Chambers” Era (1968–1977)	145
6.1	Drift Chambers	145
6.2	Time Projection Chamber	148
6.3	First Designs of Resistive-Plate Chambers	153
6.3.1	Comparison between RPCs and MWPCs	156
6.4	Photosensitive Gaseous Detectors	157
	References	158
7	Developments in MWPCs, PPACs, and RPCs after 1977	161
7.1	Modern Photosensitive Gaseous Detectors	161
7.1.1	PGDs Working on the Principle of Gas Photoionization	161
7.1.2	PGDs with Solid Photocathodes	161
7.1.3	PGDs for the Detection of UV Light	163
7.1.4	Detection of Visible Light	164
7.2	RICH Detectors	165
7.2.1	Earlier Ideas and First Designs	165
7.2.2	Present Status: RICH Detectors Based on Photosensitive MWPCs	167
7.2.3	TEA and TMAE-Based MWPCs for RICH Devices	168
7.2.4	CsI Based MWPC for RICH	169
7.3	Special Designs of MWPCs and Parallel-Plate Detectors	171
7.3.1	Position-Sensitive Gas Scintillation Chambers and Optical Readout	171
7.3.2	Optical Imaging Gaseous Detectors	174
7.3.3	Cluster Counting	176
7.3.4	MWPCs with a Very High Energy Resolution	179
7.4	Parallel-Plate Avalanche Chambers	182
7.4.1	Important Discoveries in the Physics of Breakdown processes	184
7.4.1.1	Random Avalanche Overlapping	185
7.4.1.2	Recently Discovered Phenomena Involved in Breakdowns at High Counting Rates: Cathode-Excitation Effect and Electron Jets	188
7.4.1.3	Cathode-“Excitation” phenomenon in PPACs	190
7.4.1.4	More About Jets	191
7.5	Santonico’s (Spark/Streamer) RPCs	192
7.6	Avalanche RPCs	195
7.6.1	“Streamer Suppression” in Gas Mixtures Used in RPCs	198
7.6.2	Microgap and Multigap RPCs	201
7.6.3	High Counting Rate RPCs	204
7.6.4	High Position Resolution RPCs	206
7.6.5	Cathode-Excitation Effect in RPCs	207
	References	210

8	Micropattern Gaseous Detectors	215
8.1	Introduction	215
8.1.1	Main Directions in the Design of Micropattern Gaseous Detectors	216
8.1.2	Microstrip (Microwire)-Type Gaseous Detectors	216
8.1.3	Microdot (Micropin)-Type Detectors	217
8.1.4	Hole-Type Detectors	217
8.1.5	Parallel-Plate-Type Detectors	219
8.2	Signal-Readout Techniques	221
8.3	Efforts in the Design Optimization of Micropattern Detectors	223
8.3.1	Main Trends in the Development	223
8.3.2	How Far Can We Go?	224
8.4	Gain Limit	225
8.4.1	Gain at Low Counting Rates	226
8.4.2	Gain at High Counting Rates	230
8.4.3	Slow breakdowns in micropattern detectors	234
8.5	Position Resolution	235
8.6	Recent Promising Developments in Micropattern Gaseous Detectors	236
8.6.1	Detection of Visible Photons	236
8.6.2	Latest Developments in Micropattern Detectors	240
8.6.2.1	Robust Designs of GEM-Type Detectors: Thick GEM and its modification for Resistive GEM	240
8.6.2.2	MICROMEGAS with Resistive Electrodes	244
8.6.2.3	MSGCs and Microdot Detectors with Resistive Electrodes	245
8.7	Conclusions	246
	References	246
9	Applications of Imaging Gaseous Detectors	251
9.1	High-Energy and Nuclear Physics	251
9.1.1	Large-Scale Experiments Using Gaseous Detectors Prior the Large Hadron Collider Era	251
9.1.2	LHC Detectors	262
9.2	Application to Astrophysics	268
9.2.1	Flight Experiments	268
9.2.2	Ground Experiments	269
9.2.3	Underground Experiments	273
9.3	Applications to Medicine and Biology	275
9.3.1	X-Ray Scanners	275
9.3.2	Stationary 2D X-Ray Imaging Detectors	277
9.3.3	Beta Imaging Systems	283
9.3.4	Crystallography	283
9.3.5	TOF PET	285
9.4	Application to Homeland Security	286
9.4.1	X-Ray Scanners	286

9.4.2	Muon Tomography	288
9.5	Plasma Diagnostics	290
9.6	New Areas of Application for Gaseous Imaging Detectors	299
9.6.1	Detection of Flames and Dangerous Gases with Imaging Gaseous Detectors: Recent Developments	300
9.6.2	Hyperspectroscopy	302
9.6.3	Detection of Alpha Emitting Elements in Air	305
	References	308
10	Conclusions	313
	Acknowledgments	317
	References	317
	Index	319
