Preface	v
I Foundations of the mathematical apparatus	
1 Basic concepts of group theory	3
1.1 The group postulates	3
1.2 Subgroup, direct product of groups, isomorphism, and homomorphism	6
1.3 Cosets. Semidirect product of groups	7
1.4 Conjugacy classes	9
2 Basic concepts of group representation theory	10
2.1 Linear vector spaces	10
2.2 Operators in configuration and function spaces	13
2.3 Representations of groups	15
2.4 Characters. Decomposition of reducible representations	17
2.5 Direct product of representations. Symmetric power	20
2.6 The Clebsch–Gordan coefficients	23
2.7 Basis functions of irreducible representations	25
2.8 Irreducible tensor operators. The Wigner–Eckart theorem	28
3 The permutation group	31
3.1 Operations in the permutation group. Classes	31
3.2 Irreducible representations. The Young diagrams and tableaux	33
3.3 Basis functions of irreducible representations	35
3.4 The conjugate representation	37
4 Continuous groups	39
4.1 Compact Lie groups	39
4.2 Lie group of linear transformations	41
4.3 Lie algebra. Three-dimensional rotation group	42
4.4 Irreducible representations of a three-dimensional rotation group	46

5	Point groups	51
5.1	Operations in point groups	51
5.2	Discrete axial groups	53
5.3	Cubic groups. Icosahedral groups	54
5.4	Continuous axial groups	56
6	Dynamic groups	58
6.1	Invariant dynamic groups	58
6.2	Noninvariant dynamic groups	59
II	Qualitative intramolecular quantum dynamics	
7	The philosophy of using the symmetry properties of internal dynamics	67
7.1	Symmetry groups of internal dynamics	67
7.2	Significance of the analysis of symmetry properties	73
7.3	On the domain of the point group	76
7.4	The chain of symmetry groups	81
7.5	The concept of the coordinate spin	83
7.6	The influence of numerical methods on the overall description	86
7.7	Conclusions	86
8	Internal dynamics of rigid molecules	89
8.1	Nonlinear molecules without inversion center	89
8.2	Nonlinear molecules with inversion center	101
8.3	Linear molecules	108
8.4	Description of quasidegenerate vibronic states	115
8.5	Conclusions	119
9	Molecules with torsional transitions of the exchange type	123
9.1	Extended point groups. Intermediate configuration	123
9.2	Methanol molecule CH_3OH	129
9.3	Ethane molecule C_2H_6	135
9.4	The molecules of complex hydrides LiBH_4 and NaBH_4	140
9.5	The molecules of dimethyl ether $(\text{CH}_3)_2\text{O}$ and acetone $(\text{CH}_3)_2\text{CO}$	148
9.6	Conclusions	155

10 Molecules with pseudorotations of the exchange type	157
10.1 Extended point groups	157
10.2 Cyclobutane molecule C_4H_8	159
10.3 Molecules of the XPF_4 type	166
10.4 Phosphorus pentafluoride molecule PF_5	171
10.5 The separation of internal motions	179
10.6 Conclusions	181
11 Molecules with transitions of the nonexchange type between equivalent configurations	182
11.1 Extended point groups	182
11.2 The ammonia molecule NH_3	185
11.3 The peroxide molecule $HOOH$	189
11.4 The hydrazine molecule N_2H_4	195
11.5 Conclusions	204
12 On the meaning of the Born–Oppenheimer Approximation	205
12.1 Nondegenerate electronic states	206
12.2 Degenerate electronic states	207
12.3 Internal geometric symmetry of the Hamiltonian	210
12.4 Definition of the rotational motion	216
12.5 Selection of physically meaningful states	219
12.6 Symmetry methods in the description of intramolecular dynamics	223
12.7 Geometric symmetry and definitions of nonrigid motions	226
12.8 Nuclear statistical weights	229
12.9 Conclusions	230
13 Molecules with transitions of the exchange and nonexchange types between equivalent configurations	235
13.1 Extended point groups	235
13.2 Methanol molecule CH_3OH	239
13.3 Methylamine molecule CH_3NH_2	245
13.4 Cyclopentane molecule C_5H_{10}	250
13.5 Conclusions	255

14 On the construction of extended point groups	256
14.1 Hydrogen fluoride dimer (HF) ₂	256
14.2 Ionic complexes ArH ₃ ⁺ and ArD ₃ ⁺	261
14.3 Carbocation C ₂ H ₃ ⁺	268
14.4 Conclusions	277
15 Nonrigid molecular systems with continuous axial symmetry groups	278
15.1 Systems of the HCN/HNC type	279
15.2 Complexes of the XCO type	282
15.3 Nonrigid water molecules H ₂ O	283
15.4 Conclusions	290
16 Molecules with different isomeric forms in a single electronic state	291
16.1 Distorted molecular systems	291
16.2 The methanol molecule CH ₂ DOH	293
16.3 The ethane molecule CH ₂ D–CH ₂ D	297
16.4 The ethanol molecule CH ₃ CH ₂ OH	302
16.5 The cyclobutane-1,1- <i>d</i> ₂ molecule	307
16.6 The tetrahydrofuran molecule C ₄ H ₈ O	315
16.7 Conclusions	327
17 Molecules with different isomeric forms in different electronic states	329
17.1 Formaldehyde molecule H ₂ CO	329
17.2 The ethylene molecule CH ₂ –CD ₂	336
17.3 Conclusions	348
18 Algebraic models of the global description of molecular spectrum	349
18.1 The rigid water molecule H ₂ O	350
18.2 The nonrigid methanol molecule CH ₃ OH	354
18.3 The nonrigid water molecule H ₂ O	359
18.4 Conclusions	361
19 Description of the Zeeman and Stark effects	363
19.1 External field and symmetry of the stationary states	363
19.2 The Zeeman effect in the case of a rigid molecule	364
19.3 The Zeeman effect in the case of a nonrigid molecule	367
19.4 The Stark effect in the case of a rigid molecule	368
19.5 The Stark effect in the case of a nonrigid molecule	373
19.6 Conclusions	377

20 Additional remarks on describing intramolecular dynamics	379
20.1 The nonrigid trimethylborane molecule $\text{B}(\text{CH}_3)_3$	379
20.2 Hyperfine interactions in the methane molecule CH_4	394
20.3 Parity violation effects in molecules with stereoisomers	396
20.4 Parity violation effects in the molecules without stereoisomers	398
20.5 Conclusions	401
Conclusion	403
Appendices	405
Bibliography	417
Index	423
