

Contents

1	On the Origin of Light	1
1.1	Introduction	1
1.2	Bremsstrahlung	1
1.2.1	Radiation from Charges in Motion	2
1.2.2	Coulomb Collisions	3
1.2.3	Relativistic Bremsstrahlung: The Weizsäcker–Williams Model	4
1.2.4	Coherent Bremsstrahlung	6
1.2.5	Polarization Bremsstrahlung	7
1.3	Principle of Light Generation from Quantum Transitions	8
1.4	Quantum Electrodynamical Concepts of Light Generation and Propagation	9
1.4.1	Background	10
1.4.2	Light Propagation Concept	13
1.4.3	Photon Generation for Quantum Information Science	15
1.5	On the Origin of Life: Photonic Contributions	17
1.5.1	Definitions	17
1.5.2	Geological Periods and Human Development	18
1.5.3	Overview of Hypotheses on Life's Origin	21
1.5.4	Selected Mechanistic Aspects: Quantum Tunnelling and Prebiotic Nucleotide Synthesis	23
1.5.5	Influence of Photons in Biogenesis: Photochemistry and Homochirality	27
	References	39
2	Sources of Spectral Photon Radiation	43
2.1	Introduction	43
2.2	Nuclear Processes	43
2.3	Beta Decay	46
2.4	Orbital Electron Capture: Perturbed Angular Correlations (PAC)	46

2.5	Cherenkov Radiation	50
2.6	Synchrotron, Undulator and Wiggler Radiation	53
2.6.1	Introduction to Synchrotron Radiation	53
2.6.2	Undulator Radiation	54
2.6.3	The Free Electron Laser: Self-Amplified Stimulated Emission and High Gain Harmonic Generation	56
2.6.4	Wiggler Radiation and Femtosecond Laser Slicing	62
	References	65
3	Photon Generation in Electronic Transitions: Lasers and Nanoscopic Sources	67
3.1	Introduction	67
3.2	X-Ray Plasma Lasers	67
3.3	Vacuum Ultraviolet Lasers	72
3.4	The Molecular Fluorine Laser	73
3.4.1	Short Note on Terminology	73
3.4.2	Operational Principles	73
3.5	Photon Emission in Chemical, Biological and Solid-state quantum systems	75
3.5.1	Chemiluminescence	76
3.5.2	Bio- and Electroluminescence	79
3.5.3	Photon Emission from Solid-State Quantum Systems	80
3.6	Light Emission in Scanning Tunnelling Microscopy	81
3.6.1	Introduction	81
3.6.2	Initial Work on Photon Emission in STM Experiments at Ag Films	84
3.6.3	Theoretical Concepts	86
3.6.4	STM-Induced Photon Emission on a Molecular Scale	87
3.7	Metamaterials	89
3.7.1	Introduction	89
3.7.2	Superlenses	91
3.7.3	Invisibility Cloaks	93
3.8	“Mysterious Lights”	96
3.8.1	Fox Fire	96
3.8.2	Earthquake Lights	97
3.8.3	St. Elmo’s Fire	101
3.8.4	Novaya–Zemlya Effect	103
3.8.5	Bio-Photons	105
	References	106
4	High-Energy Photons for Surface/Interface Analysis and Materials Science	111
4.1	Introduction	111
4.2	Synchrotron Radiation Experiments	111
4.2.1	Introduction: Experimental Considerations	112

4.2.2	Background on Photoelectron Spectroscopy and High-Resolution Electron Energy Loss Spectroscopy	116
4.2.3	Soft Solution Processing: Basics	123
4.2.4	Nanostructure Formation on Silicon	126
4.2.5	Device Preparation by Wet Processing	136
4.2.6	X-Ray Emission Spectroscopy: Interface Analysis in Solar Cells and Characterization of Biological Specimen	142
4.3	Perturbed Angular Correlations for Phase Analysis: The Cu–In–S System	148
	References	151
5	Photon Management: Photonic Crystals, Photosynthesis and Semiconductor–Enzyme Junctions	157
5.1	Introduction	157
5.2	Photonic Crystals	158
5.2.1	Background on Photonic Crystals	158
5.2.2	Applications of Photonic Crystals	165
5.2.3	Beyond Classical Electrodynamics	166
5.2.4	3D Photonic Crystals	168
5.2.5	Cherenkov Radiation Analysis	170
5.3	Photonic Processes in Photosynthesis	173
5.3.1	Structural and Energetic Aspects	174
5.3.2	Photonic Excitation Energy Transfer	180
5.4	Semiconductor–Enzyme Junctions: Implications for Biomimetic Approaches	189
5.4.1	Introduction	190
5.4.2	Electronics and Charge Transfer Aspects at Protein–Semiconductor Junctions	194
5.4.3	Development of a Photocatalytically Active Bio-cathode	210
	References	215
6	Exploiting the Quantum Nature of Photons	221
6.1	Introduction	221
6.2	Einstein–Podolski–Rosen Concept and Bell’s Inequality	221
6.2.1	Introduction: Entanglement and Correlations	221
6.2.2	Quantum Teleportation	225
6.2.3	Quantum Cryptography	228
6.3	Concept Transfer: Quantum Computing	230
6.3.1	Brief Background on Quantum Computing	230
6.3.2	Principles of Quantum Computing	232
6.3.3	Mathematical Aspects of Quantum Computation	233
6.3.4	Realization of Quantum Computing	235
	References	243

7	Spintronics	247
7.1	Introduction	247
7.2	Ferromagnetic Spin Injector Systems	248
7.3	Notes on Magnetism and Spin.....	251
7.4	Semiconductor Spintronics	255
7.4.1	Hybrid Ferromagnetic Metal–Semiconductor Structures	255
7.4.2	Ferromagnetic Semiconductors	258
7.4.3	Spin-Photonics	262
	References	270
