Preface XV

1	Overview of Nuclear Reactor Systems and Fundamentals	1
1.1	Introduction	1
1.2	Types of Nuclear Energy	2
1.2.1	Nuclear Fission Energy	2
1.2.2	Nuclear Fusion Energy	2
1.2.3	Radioisotopic Energy	3
1.3	Neutron Classification	3
1.4	Neutron Sources	3
1.5	Interactions of Neutrons with Matter	3
1.5.1	Fission Chain Reaction	5
1.6	Definition of Neutron Flux and Fluence	6
1.7	Neutron Cross Section	7
1.7.1	Reactor Flux Spectrum	10
1.8	Types of Reactors	11
1.8.1	A Simple Reactor Design	11
1.8.2	Examples of Nuclear Reactors	12
1.8.2.1	Generation-I Reactors	13
1.8.2.2	Generation-II Reactors	15
1.8.2.3	Generation-III and III+ Reactors	22
1.8.2.4	Generation-IV Reactors	25
1.9	Materials Selection Criteria	28
1.9.1	General Considerations	31
1.9.1.1	General Mechanical Properties	31
1.9.1.2	Fabricability	32
1.9.1.3	Dimensional Stability	32
1.9.1.4	Corrosion Resistance	32
1.9.1.5	Design	32
1.9.1.6	Heat Transfer Properties	32
1.9.1.7	Availability and Cost	33
1.9.2	Special Considerations	33
1.9.2.1	Neutronic Properties	33

1.9.2.2	Susceptibility to Induced Radioactivity	33
1.9.2.3	Radiation Stability	35
1.9.3	Application of Materials Selection Criteria to Reactor Components	35
1.9.3.1	Structural/Fuel Cladding Materials	36
1.9.3.2	Moderators and Reflectors	36
1.9.3.3	Control Materials	36
1.9.3.4	Coolants	36
1.9.3.5	Shielding Materials	37
1.10	Summary	37
	Appendix 1.A	37
	Additional Reading Materials	40
2	Fundamental Nature of Materials	43
2.1	Crystal Structure	43
2.1.1	Unit Cell	45
2.1.2	Crystal Structures in Metals	47
2.1.2.1	Body-Centered Cubic (BCC) Crystal Structure	47
2.1.2.2	Face-Centered Cubic (FCC) Crystal Structure	49
2.1.2.3	Hexagonal Close-Packed (HCP) Crystal Structure	49
2.1.3	Close Packing Geometry	52
2.1.4	Polymorphism	53
2.1.5	Miller Indices for Denoting Crystallographic Planes and Directions	54
2.1.5.1	Miller–Bravais Indices for Hexagonal Close-Packed Crystals	57
2.1.6	Interstitial Sites in Common Crystal Structures	59
2.1.7	Crystal Structure of Carbon: Diamond and Graphite	60
2.1.8	Crystal Structure in Ceramics	62
2.1.8.1	Rock Salt Structure	63
2.1.8.2	CsCl Structure	64
2.1.8.3	Fluorite Structure	65
2.1.8.4	Zincblende Structure	66
2.1.8.5	Corundum Structure	66
2.1.9	Summary	69
2.2	Crystal Defects	69
2.2.1	Point Defects	70
2.2.1.1	Point Defects in Metals/Alloys	70
2.2.1.2	Point Defects in Ionic Crystals	77
2.2.2	Line Defects	79
2.2.3	Surface Defects	84
2.2.3.1	Grain Boundaries	84
2.2.3.2	Twin Boundaries	86
2.2.3.3	Stacking Faults	87
2.2.3.4	Other Boundaries	88
2.2.4	Volume Defects	88
2.2.5	Summary	88
2.3	Diffusion	89

2.3.1	Phenomenological Theories of Diffusion	90
2.3.1.1	Fick's First Law	90
2.3.1.2	Fick's Second Law	91
2.3.2	Atomic Theories of Diffusion	95
2.3.3	Atomic Diffusion Mechanisms	97
2.3.4	Diffusion as a Thermally Activated Process	101
2.3.5	Diffusion in Multicomponent Systems	105
2.3.6	Diffusion in Different Microstructural Paths	106
2.3.6.1	Grain Boundary Diffusion	106
2.3.6.2	Dislocation Core Diffusion	108
2.3.6.3	Surface Diffusion	108
2.3.7	Summary	108
	Bibliography	110
3	Fundamentals of Radiation Damage	111
3.1	Displacement Threshold	114
3.2	Radiation Damage Models	118
3.3	Summary	125
	Bibliography and Suggestions for Further Reading	126
	Additional Reading	126
4	Dislocation Theory	127
4.1	Deformation by Slip in Single Crystals	127
4.1.1	Critical Resolved Shear Stress	130
4.1.2	Peierls–Nabarro (P–N) Stress	133
4.1.3	Slip in Crystals: Accumulation of Plastic Strain	134
4.1.4	Determination of Burgers Vector Magnitude	136
4.1.5	Dislocation Velocity	137
4.2	Other Dislocation Characteristics	140
4.2.1	Types of Dislocation Loops	140
4.2.1.1	Glide Loop	141
4.2.1.2	Prismatic Loop	141
4.2.2	Stress Field of Dislocations	142
4.2.2.1	Screw Dislocation	142
4.2.2.2	Edge Dislocation	143
4.2.3	Strain Energy of a Dislocation	144
4.2.3.1	Frank's Rule	145
4.2.4	Force on a Dislocation	147
4.2.5	Forces between Dislocations	151
4.2.6	Intersection of Dislocations	154
4.2.7	Origin and Multiplication of Dislocations	157
4.2.7.1	Consequences of Dislocation Pileups	158
4.3	Dislocations in Different Crystal Structures	160
4.3.1	Dislocation Reactions in FCC Lattices	160
4.3.1.1	Shockley Partial	160

4.3.1.2	Frank Partials	162
4.3.1.3	Lomer–Cottrell Barriers	163
4.3.2	Dislocation Reactions in BCC Lattices	165
4.3.3	Dislocation Reactions in HCP Lattices	166
4.3.4	Dislocation Reactions in Ionic Crystals	166
4.4	Strengthening (Hardening) Mechanisms	167
4.4.1	Strain Hardening	168
4.4.2	Grain Size Strengthening	170
4.4.3	Solid Solution Strengthening	172
4.4.3.1	Elastic Interaction	173
4.4.3.2	Modulus Interaction	173
4.4.3.3	Long-Range Order Interaction	173
4.4.3.4	Stacking Fault Interactions	173
4.4.3.5	Electrical Interactions	173
4.4.4	Strengthening from Fine Particles	174
4.4.4.1	Precipitation Strengthening	175
4.4.4.2	Dispersion Strengthening	177
4.5	Summary	178
	Bibliography	180
	Additional Reading	180
5	Properties of Materials	181
5.1	Mechanical Properties	181
5.1.1	Tensile Properties	184
5.1.1.1	Stress–Strain Curves	184
5.1.1.2	Effect of Strain Rate on Tensile Properties	192
5.1.1.3	Effect of Temperature on Tensile Properties	193
5.1.1.4	Anisotropy in Tensile Properties	195
5.1.2	Hardness Properties	196
5.1.2.1	Macrohardness Testing	197
5.1.2.2	Microhardness Testing	198
5.1.3	Fracture	200
5.1.3.1	Theoretical Cohesive Strength	201
5.1.3.2	Metallographic Aspects of Fracture	202
5.1.4	Impact Properties	203
5.1.4.1	Ductile–Brittle Transition Behavior	206
5.1.5	Fracture Toughness	207
5.1.5.1	Test Procedure	209
5.1.6	Creep Properties	211
5.1.6.1	Creep Constitutive Equation	212
5.1.6.2	Creep Curve	215
5.1.6.3	Stress and Creep Rupture	216
5.1.6.4	Creep Mechanisms	219
5.1.7	Fatigue Properties	227
5.1.7.1	Fatigue Curve	229

5.1.7.2	Miners Rule	234
5.1.7.3	Crack Growth	234
5.1.7.4	Paris Law	235
5.1.7.5	Factors Affecting Fatigue Life	238
5.1.7.6	Protection Methods against Fatigue	238
5.1.8	Creep–Fatigue Interaction	239
5.2	Thermophysical Properties	240
5.2.1	Specific Heat	240
5.2.2	Thermal Expansion	244
5.2.3	Thermal Conductivity	246
5.2.4	Summary	249
5.3	Corrosion	249
5.3.1	Corrosion Basics	249
5.3.2	Types of Corrosion Couples	253
5.3.2.1	Composition Cells	253
5.3.2.2	Concentration Cells	253
5.3.2.3	Stress Cells	254
5.3.3	Summary	259
	Appendix 5.A	260
	Appendix 5.B	260
	Bibliography and Suggestions for Further Reading	265
	Additional Reading	266
6	Radiation Effects on Materials	267
6.1	Microstructural Changes	267
6.1.1	Cluster Formation	271
6.1.2	Extended Defects	274
6.1.2.1	Nucleation and Growth of Dislocation Loops	275
6.1.2.2	Void/Bubble Formation and Consequent Effects	275
6.1.3	Radiation-Induced Segregation	286
6.1.4	Radiation-Induced Precipitation or Dissolution	287
6.2	Mechanical Properties	287
6.2.1	Radiation Hardening	287
6.2.1.1	Saturation Radiation Hardening	292
6.2.1.2	Radiation Anneal Hardening (RAH)	293
6.2.1.3	Channeling: Plastic Instability	294
6.2.2	Radiation Embrittlement	295
6.2.2.1	Effect of Composition and Fluence	297
6.2.2.2	Effect of Irradiation Temperature	297
6.2.2.3	Effect of Thermal Annealing	299
6.2.3	Helium Embrittlement	300
6.2.4	Irradiation Creep	302
6.2.5	Radiation Effect on Fatigue Properties	305
6.3	Radiation Effects on Physical Properties	306
6.3.1	Density	307

6.3.2	Elastic Constants	307
6.3.3	Thermal Conductivity	307
6.3.4	Thermal Expansion Coefficient	308
6.4	Radiation Effects on Corrosion Properties	308
6.4.1	Metal/Alloy	308
6.4.2	Protective Layer	308
6.4.3	Corrodent	309
6.4.3.1	LWR Environment	309
6.4.3.2	Liquid Metal Embrittlement	313
6.4.4	Irradiation-Assisted Stress Corrosion Cracking (IASCC)	313
6.5	Summary	314
	Bibliography	316
7	Nuclear Fuels	319
7.1	Introduction	319
7.2	Metallic Fuels	321
7.2.1	Metallic Uranium	321
7.2.1.1	Extraction of Uranium	322
7.2.1.2	Nuclear Properties	323
7.2.1.3	Uranium Crystal Structure and Physical Properties	324
7.2.1.4	Mechanical Properties	326
7.2.1.5	Corrosion Properties	327
7.2.1.6	Alloying of Uranium	328
7.2.1.7	Fabrication of Uranium	330
7.2.1.8	Thermal Cycling Growth in Uranium	330
7.2.1.9	Irradiation Properties of Metallic Uranium	331
7.2.2	Metallic Plutonium	335
7.2.2.1	Crystal Structure and Physical Properties of Plutonium	336
7.2.2.2	Fabrication of Plutonium	338
7.2.2.3	Mechanical Properties of Plutonium	338
7.2.2.4	Corrosion Properties	339
7.2.2.5	Alloying of Plutonium	341
7.2.3	Metallic Thorium Fuel	341
7.2.3.1	Extraction of Thorium and Fabrication	342
7.2.3.2	Crystal Structure and Physical Properties of Metallic Thorium	343
7.2.3.3	Mechanical Properties	343
7.2.3.4	Corrosion Properties of Thorium	344
7.2.3.5	Alloying of Thorium	345
7.2.3.6	Radiation Effects	346
7.2.3.7	Pros and Cons of Thorium-Based Fuel Cycles	346
7.3	Ceramic Fuels	347
7.3.1	Ceramic Uranium Fuels	347
7.3.1.1	Uranium Dioxide (Urania)	347
7.3.2	Uranium Carbide	352
7.3.3	Uranium Nitride	353

7.3.4	Plutonium-Bearing Ceramic Fuels	354
7.3.5	Thorium-Bearing Ceramic Fuels	354
7.4	Summary	356
	Bibliography	357
	Additional Reading	358
	Appendix A Stress and Strain Tensors	359
	Appendix B	367
	Index	375
