| <b>23 Corner Scattering from Literature</b> . . . . .                                                           | 467 |
| 23.1 Scattering at Corners with “Ideal” Flanks According to<br>Oberhettinger . . . . .                          | 469 |
| 23.1.1 Integral Formulation for a Line Source . . . . .                                                         | 470 |
| 23.1.2 Series Expansion for a Line Source . . . . .                                                             | 473 |
| 23.1.3 Special Case $\vartheta_0 = \pi/m$ ; $m > 0$ , Integer . . . . .                                         | 479 |
| 23.1.4 Field in a Different Integral Form for Line Source<br>and Equal Flanks . . . . .                         | 480 |
| 23.1.5 Field in Integral Form for Line Source and Mixed<br>Flanks . . . . .                                     | 484 |
| 23.2 Scattering of a Point Source at Wedges with “Ideal” Flanks . . . . .                                       | 488 |
| 23.3 Scattering at a Wedge with “Ideal” Flanks After Herglotz . . . . .                                         | 492 |
| 23.3.1 Generalisation to Solutions for $\vartheta_0 = \pi/\alpha$ ; $\alpha > 0$ . . . . .                      | 494 |
| 23.4 Scattering at a Wedge with “Ideal” Flanks After Tuzhilin . . . . .                                         | 499 |
| 23.5 Scattering of Plane Wave at a Wedge with “Mixed” Flanks<br>After Osipov . . . . .                          | 525 |
| 23.5.1 Solution $p(r, \varphi)$ as a Series, for Plane Wave,<br>Ideal Flanks, and not Too Big $k_0 r$ . . . . . | 528 |
| 23.5.2 Malyuzhinets’ Solution for Ideal and for<br>Absorbent Flanks . . . . .                                   | 534 |
| 23.5.3 Expanded Malyuzhinets-Solution for Hard<br>or Absorbent Flanks . . . . .                                 | 538 |
| 23.5.4 Solution for Soft Flank at $\varphi = -\Phi$ and Finite<br>Impedance at $\varphi = +\Phi$ . . . . .      | 542 |
| 23.5.5 Solution for a Soft Flank at $\varphi = +\Phi$ and a Finite<br>Impedance at $\varphi = -\Phi$ . . . . .  | 542 |
| 23.5.6 Approximation for Small $k_0 r$ . . . . .                                                                | 543 |
| 23.5.7 Approximation for Small $k_0 r$ and One Flank Soft . . . . .                                             | 545 |

|           |                                                                                                                                                   |            |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| 23.5.8    | Special Case of a Plane with Impedance Jump<br>i.e. $\Phi = \pi/2$ ; $\mu = 1$ . . . . .                                                          | 545        |
| 23.5.9    | Plane Screen with Impedance Surfaces; i.e.<br>$\Phi = \pi$ ; and $\Phi_{n,m}$ with $n = 2$ ; $m = 1$ ; (“Full Edge”<br>or “Half Plane”) . . . . . | 546        |
| 23.5.10   | Asymptotic Expansion of the Field at a Convex<br>Wedge for Large $k_0r$ . . . . .                                                                 | 546        |
| 23.5.11   | Asymptotic Expansion of the Field at a Convex<br>Wedge for Large $k_0r$ and Grazing Sound Incidence . .                                           | 550        |
| 23.5.12   | Change of the Angular Coordinate from $\varphi$ , Originated<br>on the Median Plane, to $\vartheta$ with Origin on a Flank . . .                  | 550        |
| <b>24</b> | <b>Shielding by Convex Corners or Screens . . . . .</b>                                                                                           | <b>553</b> |
| <b>25</b> | <b>Two-Dimensional Rooms . . . . .</b>                                                                                                            | <b>557</b> |
| 25.1      | 2D-Room . . . . .                                                                                                                                 | 557        |
| 25.2      | Equivalent Sources . . . . .                                                                                                                      | 560        |
| 25.3      | Source Angle $\Phi$ . . . . .                                                                                                                     | 562        |
| 25.4      | Walls and Mirror Sources . . . . .                                                                                                                | 563        |
