

# CONTENTS

## I. Concept and Topology of Riemann Surfaces

§ 1. Weierstrass' concept of an analytic function . . . . .	1
§ 2. The concept of an analytic form . . . . .	4
§ 3. The relation between the concepts "analytic function" and "analytic form" . . . . .	12
§ 4. The concept of a two-dimensional manifold . . . . .	16
§ 5. Examples of surfaces . . . . .	25
§ 6. Specialization; in particular, differentiable and Riemann surfaces. . . . .	32
§ 7. Orientation . . . . .	44
§ 8. Covering surfaces . . . . .	50
§ 9. Differentials and line integrals. Homology . . . . .	60
§ 10. Densities and surface integrals. The residue theorem . . . . .	72
§ 11. The intersection number . . . . .	79

## II. Functions on Riemann Surfaces

§ 12. The Dirichlet integral and harmonic differentials . . . . .	93
§ 13. Scheme for the construction of the potential arising from a doublet source . . . . .	106
§ 14. The proof . . . . .	112
§ 15. The elementary differentials . . . . .	118
§ 16. The symmetry laws . . . . .	126
§ 17. The uniform functions on $\mathfrak{F}$ as a subspace of the additive and multiplicative functions on $\hat{\mathfrak{F}}$ . The Riemann-Roch theorem . . . . .	131
§ 18. Abel's theorem. The inversion problem . . . . .	140
§ 19. The algebraic function field . . . . .	153
§ 20. Uniformization . . . . .	159
§ 21. Riemann surfaces and non-Euclidean groups of motions. Fundamental regions. Poincaré $\theta$ -series . . . . .	167
§ 22. The conformal mapping of a Riemann surface onto itself . . . . .	179

Index . . . . .	187
