1 Scaffolds for Tissue Engineering	1
1.1 Tissue Engineering	1
1.2 Replacement and Regeneration of Bones	2
1.2.1 Bone Structure and Composition	2
1.2.2 Mechanical Properties of Bone	3
1.2.3 Existing Approaches for Bone Replacement and Regeneration	4
1.2.4 Needs for Bone Tissue Engineering	5
1.3 Requirements for Scaffolds for Bone Tissue Engineering	5
1.3.1 Surface Properties	6
1.3.2 Physical Properties	6
1.3.3 Mechanical Properties	7
1.3.4 Degradation Properties	7
1.3.5 Sterilizability	7
1.4 Candidate Biomaterials for Tissue Engineering Scaffolds	8
1.4.1 Biopolymers	8
1.4.2 Inorganic Materials	12
1.4.3 Biodegradable Polymer Blends	13
1.4.4 Composites	14
References	15
2 Fabrication Techniques and Properties of Scaffolds	19
2.1 Scaffold Fabrication Techniques	19
2.1.1 Electrospinning	20
2.1.2 Solvent Casting and Particulate Leaching	20
2.1.3 Polymer Phase Separation	21
2.1.4 Rapid Prototyping	22
2.1.5 Polymer–Ceramic Composite Foams	23
2.1.6 Melt Molding	23
2.1.7 Gas Foaming	24
2.1.8 Emulsion Freezing/Freeze-Drying Technique	25

2.2	Surface Modification for Bone Tissue Engineering Scaffolds	26
2.3	Protein Adsorption	27
2.4	In Vitro Degradation of Scaffolds.	28
2.4.1	Material and Medium Factors Affecting Degradation	28
2.4.2	General Mechanism of Degradation.	29
2.4.3	Kinetics of Degradation	30
2.4.4	Degradation Characteristics	32
2.5	Degradation of PLLA and PHB Polymers	34
2.6	Diffusion Phenomena	35
2.6.1	Factors Affecting Diffusion Phenomena	35
2.6.2	Fickian and Non-Fickian Diffusion in Polymeric Materials.	36
2.7	In Vitro Biological Assessment	37
2.7.1	Cell Culture	37
2.7.2	Alkaline Phosphatase Assay.	39
	References	39
3	Biodegradable PHBV Polymer-Based Scaffolds for Bone Tissue Engineering	43
3.1	Fabrication of Biodegradable Polymer Scaffolds Using Emulsion Freezing/Freeze-Drying Technique	43
3.2	Polymer/Ceramic Composite Scaffolds and Characteristics of the Scaffolds.	49
3.3	In Vitro Degradation of PHBV and HA/PHBV Scaffolds	53
3.4	Surface Modification and In Vitro Biological Evaluation of the Scaffolds.	58
