

Contents

1	General Introduction	1
1.1	Scientific Background	1
1.1.1	Soil Moisture	1
1.1.2	Land Surface Models and Data Assimilation System	2
1.1.3	A Brief History of Hydrological Data Assimilation	3
1.2	Problem Statement	4
1.2.1	Enhanced Vapor Transport	5
1.2.2	LSMs Performance	6
1.2.3	Problem Definition	8
1.3	Statement of Objectives	8
1.4	The Proposed Procedure	9
1.5	Structure of the Thesis	10
	References	10
2	Diurnal Pattern of Coupled Moisture and Heat Transport Process	17
2.1	Introduction	17
2.2	Materials and Methods	19
2.2.1	In Situ Setup	19
2.2.2	Field Data	20
2.2.3	Model Description	20
2.2.4	Soil Characteristics Data	22
2.2.5	Initial and Boundary Conditions	24
2.3	Simulation Results	24
2.4	Discussion	27
2.4.1	Temperature and Temperature Gradients Fields	28
2.4.2	Non-isothermal Flux Fields	29
2.4.3	Matric Potential and Its Gradient Field	32
2.4.4	Isothermal Flux Fields	34
2.4.5	Soil Water Dynamics	35

2.5	Brief Summary	36
	References	37
3	Application of Diurnal Soil Water Dynamics in Determining Effective Precipitation	41
3.1	Introduction	41
3.2	Materials and Methods	43
3.2.1	Study Site Description	43
3.2.2	Experimental Design and Data Collection	44
3.3	Soil Water Balance Model	45
3.3.1	Model Description	45
3.3.2	Material Properties	45
3.3.3	Initial and Boundary Conditions	48
3.4	Results and Discussion	49
3.4.1	Model Verification	49
3.4.2	Determination of the Drying Front	51
3.4.3	Determination of Effective Infiltration	56
3.5	Brief Summary	57
	References	58
4	Two-Phase Mass and Heat Flow Model	61
4.1	Introduction	61
4.2	Model Description	63
4.2.1	Governing Equations	64
4.2.2	Constitutive Equations	69
4.2.3	Numerical Approach	76
4.3	Numerical Model Discussion	78
4.3.1	Air Phase Transport Part	78
4.3.2	Simultaneous Mass and Heat Transport Part	79
4.4	Model Verification	84
4.4.1	Case of TV86	84
4.4.2	Case of Milly (1982)	86
4.5	Numerical Analysis	88
4.5.1	Influence of Airflow in Milly's Case	88
4.5.2	Influence of Heat Flow in TV86's Case	90
4.6	Brief Summary	93
	References	93
5	How Airflow Affects Soil Water Dynamics	99
5.1	Introduction	99
5.2	Field Application	100
5.2.1	Boundary Conditions	101
5.2.2	Meteorological Forcing Data	101
5.2.3	Model Validation	103

5.2.4	Comparisons with Evaporation Measurement	105
5.3	Results and Analysis	107
5.3.1	Advective Effect on Evaporation	107
5.3.2	Driving Forces Considering Airflow	108
5.3.3	Comparison of Driving Forces and Conductivities	110
5.4	Brief Summary	117
	References	119
6	Impact of Model Physics on Retrieving Soil Moisture and Soil Temperature	123
6.1	Introduction	123
6.1.1	Reviews of Previous Work	123
6.1.2	Motivation	124
6.1.3	Focus of Chapter	125
6.2	Methodologies	125
6.2.1	Model Formulations	125
6.2.2	DM and DMV	130
6.2.3	Ensemble Transformation Kalman Filter (ETKF)	132
6.3	Data Assimilation Setup	133
6.3.1	Field Data	134
6.3.2	Model Calibration	134
6.3.3	Filter Calibration	138
6.4	Results and Analysis	143
6.4.1	Effect of Temporal Observation Interval	143
6.4.2	Effect of Surface Temperature Observation	149
6.4.3	Effect of Assimilation with Soil Moisture Only	151
6.5	Brief Summary	152
	References	153
7	Concluding Remarks	159
7.1	Results	159
7.2	Limitations	161
7.3	Discussion and Future Work	162
	References	163
