1	Introduction	1
1.1	Motivation	1
1.2	Objectives	2
1.3	Upstream Processes	5
1.4	Energy Density of On-Board Energy Carriers	10
1.5	Pathways to Better Fuel Economy	12
2	Vehicle Energy and Fuel Consumption – Basic Concepts	13
2.1	Vehicle Energy Losses and Performance Analysis	13
2.1.1	Energy Losses	13
2.1.2	Performance and Drivability	18
2.1.3	Vehicle Operating Modes	20
2.2	Mechanical Energy Demand in Driving Cycles	21
2.2.1	Test Cycles	21
2.2.2	Mechanical Energy Demand	23
2.2.3	Some Remarks on the Energy Consumption	28
2.3	Methods and Tools for the Prediction of Fuel Consumption	33
2.3.1	Average Operating Point Approach	34
2.3.2	Quasistatic Approach	37
2.3.3	Dynamic Approach	40
2.3.4	Optimization Problems	42
2.3.5	Software Tools	43
2.4	Problems	45
3	IC-Engine-Based Propulsion Systems	47
3.1	IC Engine Models	47
3.1.1	Introduction	47
3.1.2	Normalized Engine Variables	48
3.1.3	Engine Efficiency Representation	49
3.2	Gear-Box Models	51

3.2.1	Introduction	51
3.2.2	Selection of Gear Ratios	51
3.2.3	Gear-Box Efficiency	54
3.2.4	Losses in Friction Clutches and Torque Converters	55
3.3	Fuel Consumption of IC Engine Powertrains	58
3.3.1	Introduction	58
3.3.2	Average Operating Point Method	58
3.3.3	Quasistatic Method	60
3.3.4	Measures to Improve the Fuel Economy of IC-Engine Powertrains	63
3.4	Problems	65
4	Electric and Hybrid-Electric Propulsion Systems	67
4.1	Electric Propulsion Systems	67
4.1.1	Concepts Realized	68
4.1.2	Modeling of Electric Vehicles	68
4.2	Hybrid-Electric Propulsion Systems	69
4.2.1	Introduction	69
4.2.2	System Configurations	70
4.2.3	Power Flow	73
4.2.4	Functional Classification	77
4.2.5	Concepts Realized	79
4.2.6	Modeling of Hybrid Vehicles	80
4.3	Electric Motors	82
4.3.1	Introduction	82
4.3.2	Quasistatic Modeling of Electric Motors	87
4.3.3	Dynamic Modeling of Electric Motors	92
4.4	Range Extenders	104
4.5	Batteries	105
4.5.1	Introduction	105
4.5.2	Quasistatic Modeling of Batteries	111
4.5.3	Dynamic Modeling of Batteries	121
4.6	Supercapacitors	131
4.6.1	Introduction	131
4.6.2	Quasistatic Modeling of Supercapacitors	132
4.6.3	Dynamic Modeling of Supercapacitors	136
4.7	Electric Power Links	137
4.7.1	Introduction	137
4.7.2	Quasistatic Modeling of Electric Power Links	138
4.7.3	Dynamic Modeling of Electric Power Links	139
4.8	Torque Couplers	140
4.8.1	Introduction	140
4.8.2	Quasistatic Modeling of Torque Couplers	142
4.8.3	Dynamic Modeling of Torque Couplers	143
4.9	Power Split Devices	143

4.9.1	Introduction	143
4.9.2	Quasistatic Modeling of Power Split Devices	144
4.9.3	Dynamic Modeling of Power Split Devices	148
4.10	Problems	152
5	Non-electric Hybrid Propulsion Systems	163
5.1	Short-Term Storage Systems	163
5.2	Flywheels	166
5.2.1	Introduction	166
5.2.2	Quasistatic Modeling of Flywheel Accumulators	169
5.2.3	Dynamic Modeling of Flywheel Accumulators	172
5.3	Continuously Variable Transmissions	173
5.3.1	Introduction	173
5.3.2	Quasistatic Modeling of CVTs	175
5.3.3	Dynamic Modeling of CVTs	178
5.4	Hydraulic Accumulators	179
5.4.1	Introduction	179
5.4.2	Quasistatic Modeling of Hydraulic Accumulators	180
5.4.3	Dynamic Modeling of Hydraulic Accumulators	186
5.5	Hydraulic Pumps/Motors.....	187
5.5.1	Introduction	187
5.5.2	Quasistatic Modeling of Hydraulic Pumps/Motors	188
5.5.3	Dynamic Modeling of Hydraulic Pumps/Motors	191
5.6	Pneumatic Hybrid Engine Systems	191
5.6.1	Introduction	191
5.6.2	Description of Operation Modes	193
5.7	Problems	199
6	Fuel-Cell Propulsion Systems	201
6.1	Fuel-Cell Electric and Fuel-Cell Hybrid Vehicles	201
6.1.1	Introduction	201
6.1.2	Concepts Realized	203
6.2	Fuel Cells	204
6.2.1	Introduction	204
6.2.2	Quasistatic Modeling of Fuel Cells	215
6.2.3	Dynamic Modeling of Fuel Cells	230
6.3	Reformers	234
6.3.1	Introduction	234
6.3.2	Quasistatic Modeling of Fuel Reformers	237
6.3.3	Dynamic Modeling of Fuel Reformers	240
6.4	Problems	241

7	Supervisory Control Algorithms	243
7.1	Powertrain Control	243
7.2	Heuristic Energy Management Strategies	246
7.3	Optimal Energy Management Strategies	249
7.3.1	Optimal Control Problem Statement	250
7.3.2	Noncausal Control Methods (Offline Optimization)	253
7.3.3	Causal Control Methods (Online Sub-Optimal Controllers)	259
7.4	Problems	268
A	Appendix I – Case Studies	277
A.1	Case Study 1: Gear Ratio Optimization	277
A.1.1	Introduction	277
A.1.2	Software Structure	277
A.1.3	Results	279
A.2	Case Study 2: Dual-Clutch System-Gear Shifting	281
A.2.1	Introduction	281
A.2.2	Model Description and Problem Formulation	281
A.2.3	Results	283
A.3	Case Study 3: IC Engine and Flywheel Powertrain	283
A.3.1	Introduction	284
A.3.2	Modeling and Experimental Validation	286
A.3.3	Numerical Optimization	287
A.3.4	Results	289
A.4	Case Study 4: Supervisory Control for a Parallel HEV	290
A.4.1	Introduction	291
A.4.2	Modeling and Experimental Validation	291
A.4.3	Control Strategies	293
A.4.4	Results	295
A.5	Case Study 5: Optimal Rendez-Vous Maneuvers	301
A.5.1	Modeling and Problem Formulation	301
A.5.2	Optimal Control for a Specified Final Distance	303
A.5.3	Optimal Control for an Unspecified Final Distance	307
A.6	Case Study 6: Fuel Optimal Trajectories of a Racing FCEV	310
A.6.1	Modeling	311
A.6.2	Optimal Control	314
A.6.3	Results	317
A.7	Case Study 7: Optimal Control of a Series Hybrid Bus	319
A.7.1	Modeling and Validation	320
A.7.2	Optimal Control	324
A.7.3	Results	327
A.8	Case Study 8: Concept Evaluation for a Hybrid Pneumatic Engine	329
A.8.1	Control Oriented Models	330
A.8.2	Optimal Control Strategy	336

A.8.3	Simulation Results	338
A.8.4	Experimental Validation	340
B	Appendix II – Optimal Control Theory	345
B.1	Parameter Optimization Problems	345
B.1.1	Problems without Constraints	345
B.1.2	Numerical Solution	347
B.1.3	Minimization with Equality Constraints	349
B.1.4	Minimization with Inequality Constraints	352
B.2	Optimal Control	354
B.2.1	Introduction	354
B.2.2	Optimal Control for the Basic Problem	355
B.2.3	First Integral of the Hamiltonian	359
B.2.4	Optimal Control with Specified Final State	360
B.2.5	Optimal Control with Unspecified Final Time	361
B.2.6	Optimal Control with Bounded Inputs	361
C	Appendix III – Dynamic Programming	367
C.1	Introduction	367
C.2	Theory	368
C.2.1	Problem Definition	368
C.2.2	Principle of Optimality	369
C.2.3	Deterministic Dynamic Programming	369
C.2.4	Stochastic Dynamic Programming	370
C.2.5	Complexity	371
C.3	Implementation Issues	372
C.3.1	Grid Selection	372
C.3.2	Nearest Neighbor or Interpolation	372
C.3.3	Scalar or Set Implementation	375
C.3.4	Example: Mild Parallel HEV – Torque Split	376
