

Contents

Part I Invited Articles

Markov Bridges, Bisection and Variance Reduction	3
Søren Asmussen and Asger Hobolth	
Upper Bounds in Discrepancy Theory	23
William W.L. Chen	
Entropy, Randomization, Derandomization, and Discrepancy	43
Michael Gnewuch	
Asymptotic Equivalence Between Boundary Perturbations and Discrete Exit Times: Application to Simulation Schemes	79
E. Gobet	
Stochastic Approximation of Functions and Applications	95
Stefan Heinrich	
On Figures of Merit for Randomly-Shifted Lattice Rules	133
Pierre L'Ecuyer and David Munger	
A Study of the Efficiency of Exact Methods for Diffusion Simulation	161
Stefano Peluchetti, and Gareth O. Roberts	
Polynomial Lattice Point Sets	189
Friedrich Pillichshammer	
Liberating the Dimension for Function Approximation and Integration	211
G.W. Wasilkowski	

Part II Contributed Articles

A Component-by-Component Construction for the Trigonometric Degree	235
Nico Achtsis and Dirk Nuyens	
Scrambled Polynomial Lattice Rules for Infinite-Dimensional Integration	255
Jan Baldeaux	
Geometric and Statistical Properties of Pseudorandom Number Generators Based on Multiple Recursive Transformations	265
L.Yu. Barash	
Computing Greeks Using Multilevel Path Simulation	281
Sylvestre Burgos and Michael B. Giles	
Weight Monte Carlo Method Applied to Acceleration Oriented Traffic Flow Model	297
Aleksandr Burmistrov and Mariya Korotchenko	
New Inputs and Methods for Markov Chain Quasi-Monte Carlo	313
Su Chen, Makoto Matsumoto, Takuji Nishimura, and Art B. Owen	
Average Case Approximation: Convergence and Tractability of Gaussian Kernels	329
G.E. Fasshauer, F.J. Hickernell, and H. Woźniakowski	
Extensions of Atanassov's Methods for Halton Sequences	345
Henri Faure, Christiane Lemieux, and Xiaoheng Wang	
Applicability of Subsampling Bootstrap Methods in Markov Chain Monte Carlo	363
James M. Flegal	
QMC Computation of Confidence Intervals for a Sleep Performance Model	373
Alan Genz and Amber Smith	
Options Pricing for Several Maturities in a Jump-Diffusion Model	385
Anatoly Gormin and Yuri Kashtanov	
Enumerating Quasi-Monte Carlo Point Sequences in Elementary Intervals	399
Leonhard Grünschloß, Matthias Raab, and Alexander Keller	
Importance Sampling Estimation of Joint Default Probability under Structural-Form Models with Stochastic Correlation	409
Chuan-Hsiang Han	

Spatial/Angular Contribution Maps for Improved Adaptive Monte Carlo Algorithms	419
Carole Kay Hayakawa, Rong Kong, and Jerome Spanier	
Hybrid Function Systems in the Theory of Uniform Distribution of Sequences	435
Peter Hellekalek	
An Intermediate Bound on the Star Discrepancy	451
Stephen Joe	
On Monte Carlo and Quasi-Monte Carlo Methods for Series Representation of Infinitely Divisible Laws	471
Reiichiro Kawai and Junichi Imai	
Parallel Quasi-Monte Carlo Integration by Partitioning Low Discrepancy Sequences	487
Alexander Keller and Leonhard Grünschloß	
Quasi-Monte Carlo Progressive Photon Mapping	499
Alexander Keller, Leonhard Grünschloß, and Marc Droske	
Value Monte Carlo Algorithms for Estimating the Solution to the Coagulation Equation	511
Mariya Korotchenko	
Numerical Simulation of the Drop Size Distribution in a Spray	523
Christian Lécot, Moussa Tembely, Arthur Soucemarianadin, and Ali Tarhini	
Nonasymptotic Bounds on the Mean Square Error for MCMC Estimates via Renewal Techniques	539
Krzysztof Łatuszyński, Błażej Miasojedow, and Wojciech Niemiro	
Accelerating the Convergence of Lattice Methods by Importance Sampling-Based Transformations	557
Earl Maize, John Sepikas, and Jerome Spanier	
Exact Simulation of Occupation Times	573
Roman N. Makarov and Karl Wouterloot	
A Global Adaptive Quasi-Monte Carlo Algorithm for Functions of Low Truncation Dimension Applied to Problems from Finance	589
Dirk Nuyens and Benjamin J. Waterhouse	
Random and Deterministic Digit Permutations of the Halton Sequence*	609
Giray Ökten, Manan Shah, and Yevgeny Goncharov	

A Quasi Monte Carlo Method for Large-Scale Inverse Problems 623
Nick Polydorides, Mengdi Wang, and Dimitri P. Bertsekas

In Search for Good Chebyshev Lattices 639
Koen Poppe and Ronald Cools

**Approximation of Functions from a Hilbert Space Using
Function Values or General Linear Information** 655
Ralph Tandetzky

High Order Weak Approximation Schemes for Lévy-Driven SDEs..... 667
Peter Tankov

**High-Discrepancy Sequences for High-Dimensional Numerical
Integration** 685
Shu Tezuka

Multilevel Path Simulation for Jump-Diffusion SDEs 695
Yuan Xia and Michael B. Giles

Randomized Algorithms for Hamiltonian Simulation 709
Chi Zhang

Index..... 731
