## Part I A Posteriori Error Estimation and Adaptive Methods

|                                                                                                                 |    |
|-----------------------------------------------------------------------------------------------------------------|----|
| <b>An Adaptive MFD Method for the Obstacle Problem</b> .....                                                    | 3  |
| P.F. Antonietti, L. Beirão da Veiga, and M. Verani                                                              |    |
| <b>Reconstruction-Based a Posteriori Error Estimators for the Transport Equation</b> .....                      | 13 |
| R. Becker, D. Capatina, and R. Luce                                                                             |    |
| <b>A Posteriori Error Estimation by a <math>Q_1/Q_2</math> Hierarchical Basis</b> .....                         | 23 |
| M. Braack and N. Taschenberger                                                                                  |    |
| <b>Adaptive Finite Elements with Anisotropic Meshes</b> .....                                                   | 33 |
| W. Huang, L. Kamenski, and J. Lang                                                                              |    |
| <b>Anisotropic Recovery-Based a Posteriori Error Estimators for Advection-Diffusion-Reaction Problems</b> ..... | 43 |
| S. Micheletti and S. Perotto                                                                                    |    |
| <b>On Computable Bounds of Modeling Errors</b> .....                                                            | 53 |
| S. Repin and T. Samrowski                                                                                       |    |
| <b>Anisotropic Finite Elements for Fluid-Structure Interactions</b> .....                                       | 63 |
| T. Richter                                                                                                      |    |
| <b>Adaptive Finite Elements for Semilinear Reaction-Diffusion Systems on Growing Domains</b> .....              | 71 |
| C. Venkataraman, O. Lakkis, and A. Madzvamuse                                                                   |    |

## Part II Computational Electromagnetics

|                                                                                          |    |
|------------------------------------------------------------------------------------------|----|
| <b>Moment-Based Boundary Conditions for Lattice Boltzmann Magnetohydrodynamics</b> ..... | 83 |
| P.J. Dellar                                                                              |    |

|                                                                                                                                         |     |
|-----------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>A-Priori Convergence Analysis of a Discontinuous Galerkin Time-Domain Method to Solve Maxwell's Equations on Hybrid Meshes</b> ..... | 91  |
| C. Durochat and C. Scheid                                                                                                               |     |
| <b>Stabilization of a Degenerate Minimization Problem with the Single-Layer Potential</b> .....                                         | 101 |
| S. Ferraz-Leite                                                                                                                         |     |
| <b>Second Order Finite Volume Scheme for Maxwell's Equations with Discontinuous Dielectric Permittivity on Prismatic Meshes</b> .....   | 111 |
| T.Z. Ismagilov                                                                                                                          |     |
| <b>A Hybridizable Discontinuous Galerkin Method for Solving 3D Time-Harmonic Maxwell's Equations</b> .....                              | 119 |
| L. Li, S. Lanteri, and R. Perrussel                                                                                                     |     |
| <b>Locally Implicit Discontinuous Galerkin Methods for Time-Domain Maxwell's Equations</b> .....                                        | 129 |
| L. Moya                                                                                                                                 |     |
| <br><b>Part III Computational Methods</b>                                                                                               |     |
| <b>Application of the Level-Set Method to a Mixed-Mode and Curvature Driven Stefan Problem</b> .....                                    | 141 |
| D. den Ouden, F.J. Vermolen, L. Zhao, C. Vuik, and J. Sietsma                                                                           |     |
| <b>On an Efficient Family of Simultaneous Methods for Finding Polynomial Multiple Zeros</b> .....                                       | 149 |
| J. Džunić, M.S. Petković, and L.D. Petković                                                                                             |     |
| <b>Multilevel Sparse Kernel-Based Interpolation Using Conditionally Positive Definite Radial Basis Functions</b> .....                  | 157 |
| E.H. Georgoulis, J. Levesley, and F. Subhan                                                                                             |     |
| <b>A Numerical Remark on the Time Discretization of Contact Problems in Nonlinear Elasticity</b> .....                                  | 165 |
| C. Groß, R. Krause, and V. Poletti                                                                                                      |     |
| <b>Numerical Simulation of Anisotropic Surface Diffusion of Graphs</b> .....                                                            | 175 |
| D.H. Hoang and M. Beneš                                                                                                                 |     |
| <b>A Special Multiwavelet Basis for Unbounded Product Domains</b> .....                                                                 | 183 |
| S. Kestler                                                                                                                              |     |
| <b>Parameter Estimation Problems in Physically Based Image Processing</b> ...                                                           | 191 |
| M. Klinger                                                                                                                              |     |
