I Summary

II Calcium Signalling Methodology

1	Introduction	2	12	Non-linear and ultra high-speed imaging for explorations of the murine and human heart	36
2	Direct evidence - the digital approach ..	3	12.1	Introduction	36
3	Fluorescence-based visualisation	4	12.2	Methodology	37
3.1	Calcium sensors	4	12.3	Results	39
3.2	Spatio-temporal considerations	5	12.4	Discussion	42
3.3	Confocal scanning techniques	6	12.5	Conclusion	43
3.4	Further optical sectioning techniques	8	12.6	References	43
3.5	Super-resolution imaging techniques	12			
4	Aequorin-based measurements	14	13	A system for optical high resolution screening of electrical excitable cells	45
5	Measurement of calcium transport across membranes	15	13.1	Introduction	45
5.1	Flux measurements	15	13.2	Materials and methods	46
5.2	The patch-clamp technique	15	13.3	Results and discussion	48
6	Molecular biology based approaches ..	17	13.4	Conclusion	57
6.1	Determination of molecular identities	17	13.5	References	57
6.2	Antibody-based techniques	17			
6.3	Genetic manipulation	17	14	Concepts for optical high content screens of excitable primary isolated cells	59
7	Manipulation of calcium	19	14.1	Introduction	59
7.1	Pharmacological manipulation	19	14.2	Methodology	59
7.2	Optical manipulation	19	14.3	Results	61
7.3	Combined approaches	19	14.4	Discussion	64
8	Calcium-induced function	21	14.5	Conclusion	65
8.1	The concept of calcium-induced function	21	14.6	References	65
8.2	Cardiac contraction	21			
8.3	Red blood cell aggregation	21	15	A primary culture system for sustained expression of a calcium sensor in preserved adult rat ventricular myocytes	67
9	Calcium signalling in cardiac myocytes	24	15.1	Introduction	67
10	Calcium signalling in red blood cells ...	26	15.2	Methods	68
11	Perspective	29	15.3	Results	71
11.1	References	29	15.4	Discussion	80
			15.5	References	82

16	Calcium imaging of individual erythrocytes: Problems and approaches	83	20	Functional and morphological preservation of adult ventricular myocytes in culture by sub-micromolar cytochalasin D supplement	135
16.1	Introduction	83	20.1	Introduction	135
16.2	Material and methods	84	20.2	Material and methods	136
16.3	Results	84	20.3	Results	137
16.4	Discussion	89	20.4	Discussion	146
16.5	References	90	20.5	References	148

III Calcium Signalling in Cardiac Myocytes

17	Reduced Cardiac L-Type Ca^{2+} Current in $\text{Ca}_v\beta_2^-$ Embryos Impairs Cardiac Development and Contraction With Secondary Defects in Vascular Maturation	94
17.1	Introduction	94
17.2	Materials and Methods	95
17.3	Results	96
17.4	Discussion	103
17.5	References	105
18	Overexpression of junctin causes adaptive changes in cardiac myocyte Ca^{2+} signaling	107
18.1	Introduction	107
18.2	Methods	108
18.3	Results	109
18.4	Discussion	114
18.5	References	118
19	Remodelling of Ca^{2+} handling organelles in adult rat ventricular myocytes during longterm culture ..	121
19.1	Introduction	121
19.2	Material and methods	122
19.3	Results	123
19.4	Discussion	130
19.5	References	133

IV Calcium Signalling in Red Blood Cells

21	The non-selective voltage-activated cation channel in the human red blood cell membrane: reconciliation between two conflicting reports and further characterisation	152
21.1	Introduction	152
21.2	Experimental	153
21.3	Results	154
21.4	Discussion	158
21.5	Conclusion	159
21.6	References	160
21.7	Appendix: A Calculation of the channel open probability to explain the residual Ca^{2+} influx	160
22	Ion channels in the human red blood cell membrane: Their further investigation and physiological relevance	162
22.1	Introduction	162
22.2	Experimental	162
22.3	Results and discussion	163
22.4	References	165
23	Prostaglandin E_2 activates channel-mediated calcium entry in human erythrocytes: An indication for a blood clot formation supporting process	166
23.1	Introduction	166
23.2	Material and methods	166

23.3	Results and discussion	167	28.5	Research perspective	230
23.4	References	169	28.6	References	231
24	Functional NMDA receptors in rat erythrocytes	171		Subject Index	235
24.1	Introduction	171			
24.2	Materials and Methods	172			
24.3	Results	175			
24.4	Discussion	182			
24.5	References	185			
25	Stimulation of human red blood cells leads to Ca²⁺-mediated intercellular adhesion	187			
25.1	Introduction	187			
25.2	Materials and methods	188			
25.3	Results	191			
25.4	Discussion	195			
25.5	References	197			
26	Lysophosphatidic acid induced red blood cell aggregation in vitro	200			
26.1	Introduction	200			
26.2	Material and methods	201			
26.3	Results and discussion	202			
26.4	Conclusion	206			
26.5	References	208			
27	Regulation of phosphatidylserine exposure in red blood cells	210			
27.1	Introduction	210			
27.2	Materials and Methods	211			
27.3	Results	213			
27.4	Discussion	218			
27.5	Conclusion	220			
27.6	References	220			
28	Cation Channels in Erythrocytes - Historical and Future Perspective	223			
28.1	Introduction	223			
28.2	The discovery of cation channels in erythrocytes: from flux-measurements to electrophysiology	224			
28.3	Classification and properties of channels achieved by the patch-clamp technique	226			
28.4	Towards the molecular identity of the channels	229
