Introduction	xiii
References	xxii
 Part I Surprise and Information of Descriptions	
1 Prerequisites from Logic and Probability Theory	3
1.1 Logic and Probability of Propositions	3
1.2 Mappings, Functions and Random Variables	5
1.3 Measurability, Random Variables, and Expectation Value	7
1.4 Technical Comments	10
References	10
2 Improbability and Novelty of Descriptions	11
2.1 Introductory Examples	11
2.2 Definition and Properties	14
2.3 Descriptions	15
2.4 Properties of Descriptions	18
2.5 Information and Surprise of Descriptions	24
2.6 Information and Surprise of a Random Variable	30
2.7 Technical Comments	31
2.8 Exercises	32
References	34
3 Conditional and Subjective Novelty and Information	35
3.1 Introductory Examples	35
3.2 Subjective Novelty	36
3.3 Conditional Novelty	38
3.4 Information Theory for Random Variables	42
3.5 Technical Comments	44
3.6 Exercises	45
References	46

Part II Coding and Information Transmission

4	On Guessing and Coding	51
4.1	Introductory Examples	51
4.2	Guessing Strategies	53
4.3	Codes and Their Relation to Guessing Strategies	54
4.4	Kraft's Theorem	56
4.5	Huffman Codes	57
4.6	Relation Between Codewordlength and Information	58
4.7	Technical Comments	60
4.8	Exercises	60
	References	62
5	Information Transmission	63
5.1	Introductory Examples	63
5.2	Transition Probability	65
5.3	Transmission of Information Across Simple Channels	67
5.4	Technical Comments	71
5.5	Exercises	72
	Reference	74

Part III Information Rate and Channel Capacity

6	Stationary Processes and Their Information Rate	77
6.1	Introductory Examples	77
6.2	Definition and Properties of Stochastic Processes	78
6.3	The Weak Law of Large Numbers	80
6.4	Information Rate of Stationary Processes	81
6.5	Transinformation Rate	84
6.6	Asymptotic Equipartition Property	85
6.7	Technical Comments	87
6.8	Exercises	87
	References	88
7	Channel Capacity	89
7.1	Information Channels	89
7.2	Memory and Anticipation	90
7.3	Channel Capacity	91
7.4	Technical Comments	94
7.5	Exercises	94
	References	95
8	How to Transmit Information Reliably with Unreliable Elements (Shannon's Theorem)	97
8.1	The Problem of Adapting a Source to a Channel	97
8.2	Shannon's Theorem	98

8.3	Technical Comments	101
8.4	Exercises	101
	References	101

Part IV Repertoires and Covers

9	Repertoires and Descriptions	105
9.1	Introductory Examples	106
9.2	Repertoires and Their Relation to Descriptions	109
9.3	Tight Repertoires	115
9.4	Narrow and Shallow Covers	117
9.5	Technical Comments	119
9.6	Exercises	120
	References	120
10	Novelty, Information and Surprise of Repertoires	123
10.1	Introductory Examples	123
10.2	Definitions and Properties	125
10.3	Finding Descriptions with Minimal Information	133
10.4	Technical Comments	138
10.5	Exercises	138
	References	139
11	Conditioning, Mutual Information, and Information Gain	141
11.1	Introductory Examples	141
11.2	Conditional Information and Mutual Information	142
11.3	Information Gain, Novelty Gain, and Surprise Loss	146
11.4	Conditional Information of Continuous Random Variables	152
11.5	Technical Comments	154
11.6	Applications in Pattern Recognition, Machine Learning, and Life-Science	155
11.7	Exercises	156
	References	157

Part V Information, Novelty and Surprise in Science

12	Information, Novelty, and Surprise in Brain Theory	161
12.1	Understanding Brains in Terms of Processing and Transmission of Information	161
12.2	Neural Repertoires	166
12.3	Experimental Repertoires in Neuroscience	167
12.3.1	The Burst Repertoire	168
12.3.2	The Pause Repertoire	170
12.3.3	The Coincidence Repertoire	170
12.3.4	The Depolarization Repertoire	173
12.4	Neural Population Repertoires: Semantics and Syntax	173

12.5	Conclusion	175
12.6	Technical Comments	175
12.6.1	Coincidence	179
12.6.2	Coincidental Patterns	179
12.6.3	Spatio-Temporal Patterns	179
	References	181
13	Surprise from Repetitions and Combination of Surprises	189
13.1	Combination of Surprises	189
13.2	Surprise of Repetitions	191
13.3	Technical Comments	194
	References	194
14	Entropy in Physics	195
14.1	Classical Entropy	195
14.2	Modern Entropies and the Second Law	198
14.3	The Second Law in Terms of Information Gain	201
14.4	Technical Comments	204
	References	204
 Part VI Generalized Information Theory		
15	Order- and Lattice-Structures	207
15.1	Definitions and Properties	207
15.2	The Lattice $\mathfrak{D}$ of Descriptions	213
15.3	Technical Comments	214
	Reference	215
16	Three Orderings on Repertoires	217
16.1	Definition and Basic Properties	217
16.2	Equivalence Relations Defined by the Orderings	220
16.3	The Joins and Meets for the Orderings	222
16.4	The Orderings on Templates and Flat Covers	226
16.5	Technical Comments	227
16.6	Exercises	228
	References	228
17	Information Theory on Lattices of Covers	229
17.1	The Lattice $\mathfrak{C}$ of Covers	229
17.2	The Lattice $\mathfrak{F}_f$ of Finite Flat Covers	231
17.3	The Lattice $\mathfrak{R}$ of (Clean) Repertoires	232
17.4	The Lattice $\mathfrak{T}$ of Templates	233
17.5	The Lattice $\mathfrak{P}$ of Partitions	234
17.6	Technical Comments	235
17.7	Exercises	235
	References	235

Appendices

A Fuzzy Repertoires and Descriptions 237

 A.1 Basic Definitions 238

 A.2 Definition and Properties of Fuzzy Repertoires..... 240

 Reference 242

Glossary 243
