Preface *XI*

Acknowledgements *XV*

Colour Plates *XVII*

1 Theoretical Foundations *1*

- 1.1 Units *1*
 - 1.1.1 Lengths, Masses, Times, and Temperatures *1*
 - 1.1.2 Charges and Electromagnetic Fields *1*
 - 1.1.3 Natural Constants *2*
- 1.2 Lorentz Invariance *2*
 - 1.2.1 The Special Lorentz Transform *4*
 - 1.2.2 Minkowski Space *6*
 - 1.2.3 Some Properties of the Minkowski World *9*
 - 1.2.4 Relativistic Dynamics *12*
- 1.3 Electromagnetism *16*
 - 1.3.1 Field Tensor and Sources *16*
 - 1.3.2 Lorentz Transform of the Electromagnetic Field *18*
 - 1.3.3 Maxwell's Equations *19*
 - 1.3.4 Energy-Momentum Conservation *21*
 - 1.3.5 Liénard–Wiechert Potentials and the Larmor Formula *22*
 - 1.3.6 The Lorentz Force *26*
- 1.4 Elementary Kinetic Theory *28*
 - 1.4.1 The BBGKY Hierarchy and the Boltzmann Equation *28*
 - 1.4.2 Collision Terms *31*
 - 1.4.3 Diffusion in Phase-Space: The Fokker–Planck Approximation *31*
 - 1.4.4 Diffusion in Absolute Momentum *34*
 - 1.4.5 Calculation of the Diffusion Coefficient D_2 *35*
- Further Reading *37*

2 Radiation Processes *39*

- 2.1 Thomson Scattering *39*
- 2.2 Spectra *45*
- 2.3 Synchrotron Radiation *50*

2.3.1	Larmor Frequency and Relativistic Focussing	51
2.3.2	Synchrotron Power	53
2.3.3	Synchrotron Spectrum	53
2.4	Bremsstrahlung	58
2.4.1	Orbit of an Electron Scattering off an Ion	58
2.4.2	Fourier Transform of the Orbit	61
2.4.3	Integration over Impact Parameters	62
2.4.4	Average over Electron Velocities, Thermal Bremsstrahlung	63
2.5	Radiation Damping	65
2.5.1	Damping Force	65
2.5.2	Transfer of Energy from a Moving Charge to a Radiation Field	69
2.6	Compton Scattering	72
2.6.1	Energy Change in the Scattering Process	72
2.6.2	Net Energy Transfer	74
2.6.3	The Kompaneets Equation	77
2.7	Radiative Quantum Transitions	83
2.7.1	Transition Probability	83
2.7.2	Perturbing Hamiltonian	84
2.7.3	Decomposition of the Electromagnetic Field	87
2.7.4	Dipole Approximation	88
2.7.5	Cross Sections	90
2.7.6	Photoionisation Cross Section	92
2.8	Shapes of Spectral Lines	94
2.8.1	Natural Line Width	95
2.8.2	Collisional Broadening	97
2.8.3	Doppler Broadening of Spectral Lines	98
2.8.4	The Voigt Profile	99
2.8.5	Equivalent Widths and Curves-of-Growth	100
2.9	Radiation Quantities	103
2.9.1	Specific Intensity	104
2.9.2	Moments of the Intensity	105
2.9.3	Relativistic Invariance of I_ω/ω^3	107
2.10	The Planck Spectrum and Einstein Coefficients	109
2.10.1	The Planck Spectrum	110
2.10.2	Transition Balance and the Einstein Coefficients	115
2.11	Absorption and Emission	117
2.11.1	Absorption Coefficients and Emissivity	117
2.11.2	Radiation Transport in a Simple Case	119
2.11.3	Emission and Absorption in the Continuum Case	121
2.11.4	Energy Transport Through Absorbing Media	124
	Further Reading	126
3	Hydrodynamics	127
3.1	The Equations of Ideal Hydrodynamics	127
3.1.1	Particle-Current Density and Energy-Momentum Tensor	127

3.1.2	Collisional Invariants and the Fluid Approximation	130
3.1.3	The Equations of Ideal Hydrodynamics	134
3.2	Relativistic Hydrodynamics	139
3.2.1	Hydrodynamic Equations	139
3.2.2	Hydrodynamics in a Weak Gravitational Field	142
3.2.3	Gravitational Field Equation	143
3.2.4	The Combined Set of Equations	144
3.2.5	Perturbative Analysis	145
3.3	Viscous Hydrodynamics	148
3.3.1	Diffusion of Particles, Momentum and Internal Energy	148
3.3.2	The Equations of Viscous Hydrodynamics	152
3.3.3	Entropy	154
3.3.4	Fluids in a Gravitational Field	155
3.3.5	The Tensor Virial Theorem	157
3.3.6	Transformation to Cylindrical or Spherical Coordinates	160
3.4	Flows under Specific Circumstances	162
3.4.1	Sound Waves	163
3.4.2	Polytropic Equation of State	164
3.4.3	Hydrostatic Equilibrium	167
3.4.4	Vorticity and Kelvin's Circulation Theorem	170
3.4.5	Bernoulli's Constant	172
3.4.6	Bondi Accretion	175
3.4.7	Bernoulli's Law for Irrotational, Non-Stationary Flows	178
3.4.8	Diffusion of Vorticity	179
3.4.9	The Reynolds Number	179
3.4.10	Hagen–Poiseuille Flow	180
3.5	Shock Waves	183
3.5.1	The Method of Characteristics	183
3.5.2	Steepening of Sound Waves	186
3.5.3	The Rankine–Hugoniot Shock Jump Conditions	187
3.5.4	Shock Velocity	191
3.5.5	The Sedov Solution	192
3.6	Instabilities	195
3.6.1	Gravity Waves	197
3.6.2	The Rayleigh–Taylor Instability	198
3.6.3	The Kelvin–Helmholtz Instability	199
3.6.4	Thermal Instability	202
3.6.5	Heat Conduction	206
3.6.6	Convection	209
3.6.7	Turbulence	210
	Further Reading	213
4	Fundamentals of Plasma Physics and Magneto-Hydrodynamics	215
4.1	Collision-Less Plasmas	215
4.1.1	Shielding and the Debye Length	215

4.1.2	The Plasma Frequency	219
4.2	Electromagnetic Waves in Media	219
4.2.1	Polarisation and Dielectric Displacement	220
4.2.2	Structure of the Dielectric Tensor	222
4.3	Dispersion Relations	225
4.3.1	General Form of the Dispersion Relations	225
4.3.2	Transversal and Longitudinal Waves	227
4.3.3	Longitudinal and Transversal Dielectricities	227
4.3.4	Landau Damping	230
4.4	Electromagnetic Waves in Thermal Plasmas	232
4.4.1	Longitudinal and Transversal Dielectricities	233
4.4.2	Dispersion Measure and Damping	236
4.5	The Magneto-Hydrodynamic Equations	238
4.5.1	Assumptions	238
4.5.2	The Induction Equation	240
4.5.3	Euler's Equation	241
4.5.4	Energy and Entropy	243
4.5.5	Incompressible Flows	245
4.5.6	Magnetic Advection and Diffusion	245
4.6	Generation of Magnetic Fields	246
4.7	Ambipolar Diffusion	249
4.7.1	Velocity-Averaged Scattering Cross Section	250
4.7.2	Friction Force and Diffusion Coefficient	252
4.8	Waves in Magnetised Cold Plasmas	254
4.8.1	The Dielectric Tensor	254
4.8.2	Contribution by Ions	257
4.8.3	Dispersion Relations in a Cold, Magnetised Plasma	259
4.8.4	Longitudinal and Transverse Waves	261
4.8.5	Faraday Rotation	263
4.9	Hydromagnetic Waves	266
4.9.1	Linearised Perturbation Equations	266
4.9.2	Alfvén Waves	269
4.9.3	Slow and Fast Hydro-Magnetic Waves	270
	Further Reading	272
5	Stellar Dynamics	273
5.1	The Jeans Equations and Jeans' Theorem	273
5.1.1	Collision-Less Motion in a Gravitational Field	273
5.1.2	The Relaxation Time Scale	275
5.1.3	The Jeans Equations	277
5.1.4	Jeans Equations in Cylindrical and Spherical Coordinates	280
5.1.5	Application to Spherical Systems	281
5.1.6	The Tensor Virial Theorem in Stellar Dynamics	286
5.1.7	Jeans' Theorem	288
5.2	Equilibrium and Stability	290

5.2.1	The Isothermal Sphere	290
5.2.2	Equilibrium and Relaxation	294
5.2.3	Linear Analysis and the Jeans Swindle	295
5.2.4	Jeans Length and Jeans Mass	297
5.2.5	Disk Potentials	298
5.2.6	Fluid Equations for Two-Dimensional Systems	301
5.2.7	Dispersion Relation	302
5.2.8	Toomre's Criterion	304
5.3	Dynamical Friction	305
5.3.1	Deflection of Point Masses	306
5.3.2	Velocity Changes	308
5.3.3	Chandrasekhar's Formula	308
	Further Reading	312
6	Brief Summary and Concluding Remarks	313
	Index	315
