

## Contents to Volume 1

**Preface** *XVII*

**List of Contributors** *XIX*

**Part I Engineering Management for Loss Prevention Engineering** *1*

- 1 Management Systems – Loss Prevention Engineering Programs and Policy** *3*  
*Shakirudeen Shakioye*
- 2 Resource Allocation and Effectiveness Measures for Loss Prevention** *31*  
*Samuel A. Oyewole*
- 3 Engineering Systems and Engineering Economics of Loss Prevention** *53*  
*Joel M. Haight*
- 4 Safety Management and Culture** *71*  
*Brian W. Tink and Brian A. Tink*
- 5 Leadership and Loss Prevention Engineering: Creating Conditions to Get Beyond Compliance to High Performance** *89*  
*Michele Lindsay*

**Part II Design and Analysis of Protective Systems – General Loss Prevention Engineering** *113*

- 6 General Loss Prevention Engineering Programs – Including Fire Loss Control** *115*  
*Jeffery Robinson*
- 7 Permit-to-Work Systems** *141*  
*John W. Mroszczyk*

8	<b>Excavation and Trenching</b> 159
	<i>Michael W. Hayslip</i>
9	<b>Machine Safeguarding</b> 201
	<i>John W. Mroszczyk</i>
10	<b>Boilers and Pressure Vessels: a Brief Look at General Safeguards</b> 231
	<i>Patrick Fortune</i>
11	<b>Welding and Cutting</b> 261
	<i>Jeffery S. Haight</i>
12	<b>Power Tools</b> 277
	<i>Warren K. Brown</i>
13	<b>Personal Protective Equipment</b> 303

14	<b>Powered Industrial Trucks</b> 327
	<i>Thaddeus M. Pajak and Mary Hoerster</i>
	<b>Part III Ergonomics and Human Factors Engineering</b> 355
15	<b>Biomechanics and Physical Ergonomics</b> 357
	<i>Kyung-Sun Lee and Myung-Chul Jung</i>
16	<b>Human Factors and Cognitive Engineering</b> 373
	<i>Anand Tharanathan and Ling Rothrock</i>
17	<b>Virtual Working Environment</b> 393
	<i>Teodor Winkler, Jaroslaw Tokarczyk, and Dariusz Michalak</i>
18	<b>Shaping of Working Conditions Using ICT Technology</b> 423
	<i>Dariusz Michalak, Magdalena Rozmus, and Teodor Winkler</i>
19	<b>Safety-Oriented Virtual Prototyping of Mining Mechanical Systems</b> 445
	<i>Jaroslaw Tokarczyk, Marek Dudek, and Bogdan Gicala</i>

## Contents to Volume 2

### List of Contributors XXIII

### Part IV Process Safety Management and System Safety Engineering 463

<b>20</b>	<b>Process Safety Regulations Around the World 465</b>
	<i>Remigio Agraz-Boeneker</i>
20.1	Introduction 465
20.2	Process Safety – Drivers 465
20.3	Differences and Commonalities 466
20.4	Non-Regulatory Approaches 468
20.5	Lessons Learned 470
20.6	Evolving Field 471
20.7	General Duty 472
20.8	Proposed Changes to Regulations 473
20.9	Summary 473
20.10	Future of Process Safety 474
	Appendix 20.A: Process Safety Drivers 475
	Appendix 20.B Process Safety Regulations Around the World 476
	Appendix 20.C Non-Regulatory Approaches 485
	Appendix 20.D: Good Engineering Practices (GEPs) Listed in the OSHA NEP for Refineries (CPL 03-00-004) 489
	Appendix 20.E: The Author's Suggestion for a Possible Outline for a Process Safety Management Program, Based on Concepts Derived from the Main Process Safety Drivers 490
	Appendix 20.F: Abbreviations Used in the Appendices 497
	References 498
<b>21</b>	<b>Analytical Methods in Process Safety Management and System Safety Engineering – Process Hazard Analysis 501</b>
	<i>Paul Baybutt</i>
21.1	Introduction 501
21.2	Overview of PHA 502
21.3	PHA and Decision-Making 504
21.4	Stages and Steps in PHA 506
21.5	PHA Project Initiation 507
21.6	Hazard Identification 507
21.7	Selecting a PHA Method 509
21.8	Defining the Purpose, Scope, and Objectives of the Study 509
21.9	Selecting a Team 510
21.9.1	Team Members 510
21.9.2	Team Size and Composition 513
21.9.3	Leadership and Facilitation Skills 514

21.10	Collecting and Preparing Reference Information and Data	514
21.11	Estimating the Effort Involved and Scheduling Study Sessions	516
21.12	Briefing/Training Team Members	517
21.13	Arranging Required Facilities	517
21.14	Other Items	518
21.15	Subdividing the Process	518
21.16	Performing an Inherent Safety Review	520
21.17	First Session	520
21.18	Recording PHA Studies	522
21.19	Making Worksheet Entries	524
21.19.1	Initiating Events (Causes)	524
21.19.2	Intermediate Events	526
21.19.3	Consequences	527
21.19.4	Safeguards	527
21.19.5	Enablers	528
21.19.6	Risk Ranking	529
21.19.7	Recommendations	531
21.20	Special Topics	532
21.20.1	Multiple Failures	532
21.20.2	Human Factors	534
21.20.3	Facility Siting	535
21.20.4	Utilities	536
21.20.5	Modes of Operation	537
21.20.6	Process Changes	538
21.20.7	Procedures	538
21.20.8	Non-Steady-State Processes	539
21.20.9	Quality Control	539
21.20.10	Limitations and Cautions	540
21.21	Revalidation	540
21.22	Report Preparation	542
21.23	Follow-up	542
	Acknowledgments	544

	Appendix 21.B. Comparison of PHA Methods	551
	References	552
<b>22</b>	<b>Safety Instrumented Systems</b>	<b>555</b>
	<i>Geoffrey S. Barnard</i>	
22.1	Introduction	555
22.1.1	History	555
22.1.2	Functional Safety Engineering Standards	556
22.1.3	Regulatory Requirements	557
22.1.4	Notes on This Chapter	557
22.2	Fundamentals	558
22.2.1	Layers of Protection	558

22.2.2	Control Versus Safety	560
22.2.3	Access Restriction	560
22.2.4	Testing and Diagnostics	561
22.2.5	Redundancy and Fault Tolerance	562
22.2.6	Independence and Diversity	562
22.2.7	Integrated Control and Safety	563
22.3	Planning and Management	564
22.3.1	Functional Safety Life-Cycle Process	564
22.3.2	Policies, Procedures, and Documentation	566
22.3.3	Roles and Responsibilities	567
22.3.4	Performance Management	567
22.4	Analysis Phase	569
22.4.1	Process Hazard Analysis	569
22.4.2	Layers of Protection Analysis	570
22.4.3	Safety Integrity Level Determination	572
22.4.4	Safety Instrumented Function Design and Safety Requirements Specifications	573
22.4.5	Safety Integrity Level Verification	575
22.4.6	Justification	579
22.5	Realization Phase	580
22.5.1	Hardware	580
22.5.2	Application Program	581
22.5.3	Interfaces	582
22.5.4	Fabrication and Installation	582
22.5.5	Integration and Factory Acceptance Testing	583
22.5.6	Maintenance and Testing Procedures	584
22.5.7	Commissioning and Site Acceptance Testing	585
22.5.8	Pre-Startup Safety Review	586
22.5.9	Functional Safety Assessments	586
22.6	Operation Phase	587
22.6.1	Inspection, Maintenance, and Proof-Testing	587
22.6.2	Management of Change	588
22.6.3	Performance Monitoring and Continuous Improvement	589
22.7	Conclusion	590
	References	590
<b>23</b>	<b>Analytical Methods in Process Safety Management and System Safety Engineering – Layers of Protection Analysis</b>	<b>593</b>
	<i>Paul Baybutt</i>	
23.1	Introduction	593
23.2	Overview of LOPA	595
23.2.1	Nature of LOPA	595
23.2.2	Hazard Scenarios	596
23.2.3	LOPA Characteristics	598
23.2.4	Timing of LOPA	599

23.3	Scenario Risk	599
23.3.1	Meaning of Risk	599
23.3.2	LOPA Approaches	599
23.3.3	Risk Calculation	600
23.3.4	Use of Risk Estimates	601
23.4	Risk Tolerance Criteria	601
23.4.1	ALARP Principle	601
23.4.2	Form of Risk Tolerance Criteria	602
23.4.3	Types of Risk Tolerance Criteria	603
23.4.4	Determining Tolerable Risk	605
23.4.5	Use of Risk Tolerance Criteria	605
23.5	Stages and Steps in LOPA	606
23.6	Initiating a Project	607
23.7	Preparing for LOPA	608
23.7.1	Deciding on a LOPA Approach	608
23.7.2	Deciding on Tolerable Risk Criteria	609
23.7.3	Selecting Hazard Scenarios for Analysis	609
23.7.4	Determining Which Scenario Elements Will Be Addressed	610
23.7.5	Deciding on Criteria for Qualifying Safeguards as IPLs	611
23.7.6	Obtaining and Using Failure Data	612
23.7.6.1	Data Sources	612
23.7.6.2	Standardized Data	613
23.7.6.3	Use of Data	614
23.8	Preparing for a Study	615
23.8.1	Defining the Purpose, Scope, and Objectives	615
23.8.2	Selecting a Team	615
23.8.3	Collecting Information and Data Needed	616
23.8.4	Estimating the Effort Required and Scheduling Study Sessions	616
23.8.5	Briefing/Training Team Members	617
23.8.6	Arranging Required Facilities	617
23.8.7	Addressing Other Items	617
23.9	Conducting a Study	618
23.9.1	Conducting the First Session	618
23.9.2	Recording Scenario Information	619
23.9.2.1	Study Worksheets	619
23.9.2.2	Format and Content of LOPA Worksheets	621
23.9.2.3	Use of LOPA Worksheets	622
23.9.3	Assigning Initiating Event Frequencies	623
23.9.4	Addressing Enablers	623
23.9.5	Assigning Enabler Probabilities/Multipliers	624
23.9.6	Identifying Existing IPLs	625
23.9.7	Assigning IPL PFDs	626
23.9.8	Documenting IPLs	626
23.9.9	Estimating Scenario Consequence Severity and Frequency	629
23.9.10	Evaluating Scenario Risk	629

23.9.11	Assessing Compliance with Tolerable Risk Criteria	629
23.9.12	Developing Recommendations for Any Needed Risk Reduction	629
23.9.13	Addressing Quality Assurance	630
23.9.14	Revalidating Previous Studies	630
23.9.15	Preparing a Report	630
23.9.16	Following Up	631
23.9.16.1	Addressing Risk Reduction Needed	631
23.9.16.2	Verifying That IPLs Do Not Introduce Additional Hazards	633
23.9.16.3	Verifying IPL Adequacy	633
23.9.16.4	Modifying the PSM Program	633
23.9.16.5	Auditing IPLs	633
23.10	Limitations, Cautions, and Pitfalls	633
