

Table of Contents

Part 1: Caries—Science

The Disease

Ecology of the Oral Cavity

Kim R. Ekstrand, Domenick T. Zero

Teeth	4	Saliva Production, Salivary Glands	10
Tooth Development and Tooth Emergence	4	Function of Saliva	10
Macromorphological Terms	4	Pellicle	12
Occlusal Surfaces	4	Hyposalivation	13
Approximal Surfaces	7	Changes in Teeth and Saliva with Aging	13
The Cervical Enamel Line and the Roots	7	Dental Plaque or Dental Biofilm?	14
Enamel	7	Classifying Oral Microorganisms	14
Chemical Composition and Structure of		Colonization of the Mouth in the Newborn	15
Apatite Crystals	8	Plaque: Development and Metabolic End Products	15
The Dentin–Pulp Organ	9	Plaque Stagnation Areas	16
The Cementum	10	Plaque Composition and Structure in	
Saliva	10	Stagnation Areas	17

Etiology and Pathogenesis of Caries

Peter Shellis

Microbiology of Caries	23	Chemistry of Caries	33
Chemistry of Dental Minerals	25	Enamel Lesion Formation	33
Solubility, Dissolution, and Crystal Growth	25	Dentin Lesion Formation	34
Minerals of Dental Tissues	26	Fluoride and Lesion Formation	34
Fluoride and Calcium Phosphate Chemistry	27	Remineralization and Lesion Arrest	34
The Cariogenic Challenge	28	Dental Erosion	35

Histological and Clinical Appearance of Caries

Wolfgang Buchalla

Enamel Caries	40	Spread of Bacteria within Dentin	52
Location in the Teeth	40	Hardness of Carious Dentin	52
The White Spot Lesion	42	Fluorescence Properties of Carious and	
Activity of White and Brown Spot Lesions	42	Healthy Dental Hard Tissue	54
Transmitted and Polarized Light Microscopy	43	Caries of the Exposed Root	55
Transverse Microradiography	46	Caries Arrest and Remineralization	57
Scanning Electron Microscopy	47	Correlation of Histology with Radiography	
Transmission Electron Microscopy	48	and Clinical Appearance of Caries	58
Dentin Caries	48	Erosion—a Noncarious Defect	59
Early Signs of Dentin Reaction	50		
Continuing Caries Progression into Dentin	51		

8 Epidemiology of Caries and Noncarious Defects*Ulrich Schiffner*

General Relevance of Epidemiology	119	Occurrence and Distribution of Caries	125
Study Types	119	Trends in Caries Epidemiology	126
Descriptive Epidemiology of Caries and Noncarious Defects	120	Global Considerations	126
Epidemiological Identification of Caries.	120	Children and Adolescents	126
Indices for Coronal Caries.	121	Association of Caries and Social Status.	128
Indices for Root Caries.	123	Adults and Seniors.	128
Other Indices for Public Health Needs.	124	Root Caries.	129
Indices for Noncarious Defects	124	Occurrence and Distribution of Noncarious Defects	129
Developmental Defects of the Dental Hard Tissues	124	Developmental Defects.	129
Acquired Defects of the Dental Hard Tissues	125	Acquired Defects of Enamel and Dentin	130

9 From Diagnostics to Therapy*Sebastian Paris, Kim R. Ekstrand, Hendrik Meyer-Lueckel*

From Diagnostics	134	Microinvasive Measures	141
Diagnostics at the Individual Level.	134	Sealants.	141
Diagnostics at the Tooth Level.	134	Infiltration	141
How is Caries Diagnosed?	134	(Minimally) Invasive Measures.	142
The Truth About Caries	135	Restoration	142
Diagnostic Errors and Their Consequences.	136	Additional Measures	142
The Diagnostic Process	137	Which Measures are Indicated at What Time?	142
Categories and Thresholds	138	Individual Level	142
...to Therapy	139	Tooth Level	142
Aim of Treatment	139	Therapeutic Options for Occlusal Caries	143
Treatment Approaches	140	Therapeutic Options for Approximal Caries.	143
Noninvasive Measures.	140	Therapeutic Options for Caries in Accessible Smooth Surfaces	143
Influencing the Biofilm	140	Therapeutic Options for Root Caries	144
Influencing Diet	140		
Influencing Mineralization	141		

Noninvasive Therapy**10 Caries Management by Modifying the Biofilm***Sebastian Paris, Christof Doerfer, Hendrik Meyer-Lueckel*

Dental Plaque as a Biofilm	147	Triclosan/Copolymer	155
Mechanical Biofilm Control	148	Essential Oil (Listerine).	156
Correlation between Oral Hygiene and Caries	148	Sodium Lauryl Sulfate	156
Self-Applied Mechanical Biofilm Control	148	Metal Ions	156
Tooth Brushing	148	General Considerations.	156
Interdental Hygiene	153	Biological Biofilm Control	156
Professional Tooth Cleaning	154	Vaccination	157
Chemical Biofilm Control	154	Probiotic Therapy	157
Chlorhexidine	155		
Xylitol	155		

11 Caries Management by Modifying Diet*Bennett T. Amaechi*

Carbohydrates (Sugars) in the Caries Process . . .	162	Other Food Components	169
Conventional Sugars	162	Proteins	169
Sugar Metabolism and Acid Production by		Fats	169
Cariogenic Microorganisms	163	Food Preservatives	169
Intracellular Pathway	163	Fresh Fruits, Vegetables,	
Extracellular Pathway	164	and Other Dietary Components	170
Factors Modifying the Role of Sugars in		Influence of Nutritional Deficiencies in the	
Caries Development	165	Caries Process	170
Frequency of Sugar Intake	165	Population Groups with Raised Caries Risk	
Consistency of the Sugary Food	165	Due to Dietary Pattern	170
Amount of Sugar Intake	166	Children	170
Thickness and Age of the Plaque	166	The Elderly	171
Sugar Alcohols	167	Dietary Guidance for Prevention of	
Xylitol	167	Dental Caries	171
Sorbitol	167	Snacking Habit	172
Maltitol	168	Diet and Erosion	172
Intense Sweeteners	168		

12 Caries Management by Influencing Mineralization*Svante Twetman, Kim R. Ekstrand*

What is Fluorine/Fluoride?	177	Community-Based Fluoride Application	186
Units of Measure	177	Water Fluoridation (After Introduction of	
Fluoride In Our Surroundings	177	Fluoride Toothpaste)	186
Fluoride In Humans	177	Fluoridated Milk and Salt	186
Acute Toxicity	177	Individual Fluoride Application:	
Fluoride Absorption and Distribution	178	Professionally Applied Fluorides	186
Fluoride in Teeth	179	Fluoride Varnishes	186
Fluoride in Saliva and in Plaque	179	Fluoride Solutions	187
From Mottled Enamel (Colorado Stained Teeth)		Fluoride Gels	188
to Dental Fluorosis	180	Individual Fluoride Application:	
Prevalence of Dental Fluorosis	180	Self-Applied Fluorides	188
Effects of Water Fluoridation on Caries and		Fluoride Toothpaste	188
Dental Fluorosis: Pre- or Posteruption?	182	Fluoride Mouth Rinses	189
How Fluoride Interacts with the Caries Process	183	Fluoride Tablets and Chewing Gums	189
Formation of Calcium Fluoride	183	Other Fluoride-Containing Products and Devices	189
Influence of Fluoride on Microbial Metabolism	184	Safety of Fluorides	189
Discussion of Classical Data	184	Guidelines	190
Clinical Effectiveness of Fluoride	185	Other Remineralization Agents	190
Systemic and Topical Fluorides	186	CPP-ACP	190

13 Oral Health Promotion: Implementation of Noninvasive Interventions and Health-Related Behaviors to Control the Caries Process*Hendrik Meyer-Lueckel, Sebastian Paris*

Implementing Strategies of Prevention	195	A Little More Upstream: Setting-Approaches	196
Prevention—What Does This Mean?	195	Most Upstream: the Population-Based Common	
Why Do People Get Sick?	195	Risk Factor Approach	197

16 Transfer of the Sealing Technique from the Occlusal to the Approximal Surface*Stefania Martignon, Kim R. Ekstrand*

Transfer of the Sealing Technique from the Occlusal to the Approximal Surface	240
Clinical Procedure	240
Which Approximal Lesions Should Be Sealed?	240
Techniques for Approximal Sealing	241

Sealing Procedure	241
Patch Technique	241
Clinical Evidence	242

17 Caries Infiltration*Hendrik Meyer-Lueckel, Sebastian Paris*

Development of Caries Infiltration	246
Biological Principles	246
Principle of Caries Infiltration	248
Infiltration to Prevent Caries Progression	249
Clinical Efficacy of Infiltrating	
Approximal Surfaces	250
Indications for Approximal Caries Infiltration	250

Clinical Use of Approximal Caries Infiltration	253
Follow-up for Approximal Caries	253
Infiltration for Primarily	
Esthetic Reasons	253
Scientific Studies	253
Indication	254
Follow-up	255

Invasive Therapy**18 How Much Caries Do We Have to Remove?***David D. J. Ricketts*

Historical Perspective	260
When to Remove Caries?	261
Enamel Lesion	261
Enamel-Dentin Junction	261
Cavitation	261
Microbial Invasion of Dentin	262
Dentin Caries	263
Conventional Caries Removal	264

Caries Removal at the Enamel-Dentin Junction . .	264
Contemporary Caries Removal	265
Pulp-Dentin Complex	265
Deep Caries	265
Fissure Sealant Studies	266
Stepwise Excavation Studies	266
Systematic Review of the Literature	268
Is There a Need for Cavity Disinfection?	268

19 Minimally Invasive Therapy with Tooth-Colored Direct Restorative Materials*Roland Frankenberger, Uwe Blunck*

Indications for Restorative Therapy	272
Posterior Teeth	272
Anterior Teeth	272
Cervical Area	273
Manifestations and Causes	273
Technical Limits to Direct Restorative Materials . .	273
Materials for Tooth-colored	
Direct Restorative Therapy	275
Overview	275
Glass-Ionomer Cements	275
Composites	275
Resin-Modified Glass-Ionomer Cements	276
Compomers	276
Choosing Materials for Different Indications	277
Posterior Region	277
Anterior Region	277
Cervical Defects	277

Preparation Instruments	277
Excavation	277
Rotating Preparation	277
Oscillating Preparation	277
Rules for Minimally Invasive Preparation	278
General Preparation Rules	278
Access Forms	278
Anterior Region	278
Posterior Region	278
Class I (Fissures and Grooves)	278
Class II (Approximal-Occlusal)	279
Class III and Class IV (Anterior Tooth)	279
Class V (Cervical Area)	279
Problems in the Treatment of Cervical Defects . .	279
Damage to the Neighboring Tooth in	
Approximal Preparations	280

Clinical Experience with Minimally Invasive Restorative Therapy	280
Posterior Teeth	280
Anterior Teeth	281
Cervical Area	281

Repairing Restorations	282
-----------------------------------------	-----

Treatment Decision

20 Decision-Making in Managing the Caries Process

Hendrik Meyer-Lueckel, Martin J. Tyas, Michael J. Wicht, Sebastian Paris

Fundamentals of Evidence-Based Dentistry	287	Philosophy "Drill and Fill"	293
Treatment Recommendations	288	A New Philosophy: "Heal and Seal"	293
Study Types	289	Limits to Noninvasive Therapies	294
Shared Decision-Making	289	Micromorphological Aspects	294
The Doctor–Patient Relationship	290	Clinical Considerations	294
Including the Patient in the Decision-Making Process	290	Radiographic Extension—Cavitation of the Surface	294
Implementing Shared Decision-Making in Practice	291	Cavitation—Biofilm	295
The Nine Steps of Shared Decision-Making	291	Biofilm—Caries Progression	295
Decisions, Decisions: Noninvasive, Microinvasive, or (Minimally) Invasive?	292	Speed of Caries Progression	295
When in Rome, Do as the Romans Do	292	Limits to Microinvasive Therapies	296
Economic Consequences of the Time of Therapy	293	Avoidance of Overtreatment	297
Consequences on Therapy of "Philosophy" in Cariology	293	The Problem of Undertreatment	297
		Dentin Involvement	297
		Residual Microorganisms	297
		Limits to Invasive Therapies	297
		Decision Trees and Choice of Therapy	299

Special Aspects in Children and the Young

21 How to Maintain Sound Teeth: an Individualized Population Strategy for Children and Adolescents

Kim R. Ekstrand

The Multifactorial Concept of Caries	306	Eruption Time for Teeth in the Two Dentitions	308
Relevant Epidemiology	307	Diagnostics of Caries in the Child Population	308
Caries in the Primary Dentition	307	Individualized Population Strategy	308
Caries in the Permanent Dentition	307	Documentation of caries experience	310
Caries Progression Rate through the Enamel	308		

22 Individualized Caries Management in Pediatric Dentistry

Christian H. Splieth, Mohammad Alkilzy

Deciduous versus Permanent Teeth	314	Minimum Intervention in Permanent Teeth in Children and Adolescents	316
Anatomy	314	Occlusal Surfaces	317
Epidemiology	314	Sealants for Individuals at High Risk of Caries	318
Function and Longevity	314	Approximal Surfaces	318
Erupting Permanent Teeth	315		
Treatment Concepts in Deciduous Teeth	315		
Buccal Surfaces	315		
Occlusal Surfaces	316		
Approximal Surfaces	316		

A Glimpse into the Future

23 Future Trends in Caries Research

Brian H. Clarkson, Agata Czajka-Jakubowska

Genetic Approaches	321	Tissue Engineering	322
Genomics—Caries Susceptibility	321	The Dentin—Pulpal Complex	322
Probiotics—Replacement Therapy with non-Acid-Producing Bacteria	321	Nanotechnology	323
Gene Therapy—Repairing Salivary Glands	321	Dendrimers—Antimicrobials/Antiadherents	323
Proteomics	322	Antibacterial Nanoemulsions	323
Antibody Engineering—Bacterial Adherence.	322	Degradable Microspheres—Remineralizing Agents	323
Enzyme Recognition—Caries Activity Assessment	322	“Smart” Materials—Responding to Physiological and Nonphysiological Changes in the Oral Cavity.	324
		Synthetic Enamel	324

Part 2: Caries—Clinical Practice

24 Diagnostics, Treatment Decision, and Documentation

Sebastian Paris, Rainer Haak, Hendrik Meyer-Lueckel

Caries Diagnostics at the Patient Level	330	Visual-Tactile Examination	333
Determining the Risk Factors	331	Primary Caries	333
Caries Experience	331	Caries Adjacent to Restorations	333
Sugar Consumption	331	Additional Diagnostic Tools	335
Frequency of Food Consumption	331	Bitewing Radiographs and Fiberoptic Transillumination	335
Oral Hygiene	331	Laser Fluorescence	336
Fluoride Sources	331	Endodontic Findings	336
Salivary Flow	331	Additional Diagnostics	336
Calculating the Caries Risk and Consequences	331	Diagnosis and Planning a Therapy	337
Caries Diagnostics at the Tooth Level	333		

25 Minimal Interventional Treatment of Caries in the Permanent Dentition: Clinical Cases

Hendrik Meyer-Lueckel, Sebastian Paris, Christian A. Schneider, Leandro A. Hilgert, Soraya Coelho Leal

Case 1: A 30-year-old Woman with Low-to-Medium Caries Risk	339	Case 3: Minimally Interventional Anterior Restorations	361
<i>Hendrik Meyer-Lueckel, Sebastian Paris</i>		<i>Christian A. Schneider, Hendrik Meyer-Lueckel</i>	
Anamnesis	339	Anamnesis	361
Clinical Findings (Tooth Level)	339	Clinical Findings	361
Caries Risk Assessment (Individual Level)	341	Caries Risk	361
Diagnoses and Treatment Plan	342	Diagnosis and Treatment Plan	362
Individual Level	342	Individual Level	362
Tooth Level	342	Tooth Level	362
Clinical Aspect at the End of the Treatment	348	Case 4: Infiltration to Mask Caries Lesions	367
Follow-up	348	<i>Leandro A. Hilgert, Soraya Coelho Leal</i>	
Case 2: A 22-year-old Man with Medium Caries Risk	351	Anamnesis	367
<i>Hendrik Meyer-Lueckel, Sebastian Paris</i>		Clinical Findings	367
Anamnesis	351	Caries Risk	368
Clinical Findings (Tooth Level)	351	Diagnosis and Treatment Plan	368
Caries Risk Assessment (Individual Level)	352	Individual Level	368
Diagnosis and Treatment Plan	353	Tooth Level	369
Individual Level	353	Clinical Aspect at the End of the Treatment	370
Tooth Level	353	Case 5: Stepwise Caries Excavation	371
Clinical Aspect at the End of the Treatment	360	<i>Hendrik Meyer-Lueckel, Sebastian Paris</i>	
Follow-up	360		

26 Minimal Interventional Treatment of Caries in Young Children: Clinical Cases

Vera Mendes Soviero, Soraya Coelho Leal, Christian Splieth, Mohammad Alkilzy

Case 1: A 6-Year-Old Boy with High Caries Risk . . .	374	Case 3: A 6-Year-Old Girl with Very High Caries Risk	385
<i>Mohammad Alkilzy, Christian Splieth</i>		<i>Vera Mendes Soviero, Soraya Coelho Leal</i>	
Anamnesis	374	Anamnesis	385
Clinical Findings (Tooth Level)	374	Clinical Findings (Tooth Level)	385
Caries Risk Assessment (Individual Level)	375	Caries Risk Assessment (Individual Level)	386
Diagnosis and Treatment Plan.	376	Diagnosis and Treatment Plan	388
Individual Level	376	Individual Level	388
Tooth Level	377	Tooth level	389
Clinical Aspect at the End of the Treatment	380	Clinical Aspect at the End of the Treatment	393
Follow-up	380	Follow-up	393
 Case 2: A 7-Year-Old Girl with Medium Caries Risk	 381	 Case 4: An 8-Year-Old Boy with Medium Caries Risk	 394
<i>Vera Mendes Soviero, Soraya Coelho Leal</i>		<i>Vera Mendes Soviero, Soraya Coelho Leal</i>	
Anamnesis	381	Anamnesis	394
Clinical Findings (Tooth Level)	381	General Findings	394
Caries Risk Assessment (Individual Level)	381	Oral Health Indices	394
Diagnosis and Treatment Plan.	383	Clinical Findings (Tooth Level)	394
Individual Level	383	Caries Risk Assessment (Individual Level)	397
Tooth Level	383	Diagnosis and Treatment Plan	397
Follow-up	385	Individual Level	398
		Tooth Level	398
		Monitoring and Recall	399

27 Appendix

Dental examination form	401
Caries risk analysis	402
Treatment plan	403

Index	405
