Acknowledgments	iv
1 Introduction	1
2 Gradient Boosting	9
2.1 The Objective of Boosting	10
2.2 Steepest Descent	12
2.3 Componentwise Boosting	15
2.4 Loss Functions	17
2.4.1 Continuous Response	17
2.4.2 Binary Response	20
2.4.3 Additional Parameters in the Loss Function	21
2.5 Discussion	21
2.5.1 Stopping condition	22
2.5.2 Regularization	23
2.5.3 Bias	24
2.5.4 Forwardness	25
2.5.5 Sparsity	25
2.5.6 Inference	26
2.5.7 Base learners	27

3	Nonlinear Time Series Models	29
3.1	Introduction	30
3.2	Linear and Additive Boosting	32
3.2.1	Componenwise Linear Base Learner	33
3.2.2	Componentwise P-spline Base Learner	34
3.3	Simulation Study	35
3.4	Economic Forecasting with Boosting	39
3.4.1	Forecasting Principles	41
3.4.2	Univariate Forecasting of Industrial Production	42
3.4.3	Forecasting Industrial Production with Exogenous Variables	44
3.5	Concluding Remarks	49
3.6	Computational Details	50
4	Boosting the Anatomy of Volatility	53
4.1	Introduction	53
4.2	Volatility Boosting Approach	56
4.2.1	Proposed Model	56
4.2.2	An Illustration	59
4.3	An Empirical Application to Four Asset Classes	62
4.3.1	The Data	63
4.3.2	Analyzing the Predictive Performance	64
4.4	Empirical Results	67
4.4.1	Forecast Evaluation	67
4.4.2	The Driving Factors	71
4.5	Conclusions	76
5	Boosting for Estimating Spatially Structured Additive Models	79
5.1	Introduction	79
5.2	Methods	81
5.2.1	Spatio-Temporal Structured Additive Models	82
5.2.2	Tree Based Learners	85

5.2.3	Generalized Additive Model	86
5.3	Results	87
5.3.1	Spatial Estimates	88
5.3.2	Model Comparison	90
5.4	Discussion	92
6	Summary and Conclusion	95
A	The Choice of Leading Indicators	97
