Preface	vii
Notation	ix
<b>1 What is surface tension?</b>	<b>1</b>
1.1 Surface tension and its definition	1
1.2 Physical origin of the surface tension of liquids	2
1.3 Temperature dependence of the surface tension	5
1.4 Surfactants	6
1.5 The Laplace pressure	6
1.6 Surface tension of solids	8
1.7 Values of surface tensions of solids	9
Appendix 1A. The short-range nature of intermolecular forces	10
Appendix 1B. The Laplace pressure from simple reasoning	10
Bullets	11
References	12
<b>2 Wetting of ideal surfaces</b>	<b>13</b>
2.1 What is wetting? The spreading parameter	13
2.2 The Young equation	14
2.3 Wetting of flat homogeneous curved surfaces	17
2.4 Line tension	19
2.5 Disjoining pressure	20
2.6 Wetting of an ideal surface: influence of absorbed liquid layers and the liquid vapor	22
2.7 Gravity and wetting of ideal surfaces: a droplet shape and liquid puddles	24
2.8 The shape of the droplet and the disjoining pressure	27
2.9 Distortion of droplets by an electric field	29
2.10 Capillary rise	30
2.11 The shape of a droplet wetting a fiber	33

2.12 Wetting and adhesion. The Young–Dupre equation .....	35
2.13 Wetting transitions on ideal surfaces .....	36
2.14 How the surface tension is measured? .....	37
2.14.1 The Du Noüy ring and the Wilhelmy plate methods .....	37
2.14.2 The pendant drop method .....	38
2.14.3 Maximum bubble pressure method .....	39
2.14.4 Dynamic methods of measurement of surface tension .....	40
2.15 Measurement of surface tension of solids .....	43
Appendix 2A. Transversality conditions .....	44
Appendix 2B. Zisman plot .....	45
Bullets .....	46
References .....	46
<b>3 Contact angle hysteresis</b> .....	<b>50</b>
3.1 Contact angle hysteresis: its sources and manifestations .....	50
3.2 Contact angle hysteresis on smooth homogeneous substrates .....	52
3.3 Strongly and weakly pinning surfaces .....	53
3.4 Qualitative characterization of the pinning of the triple line .....	57
3.5 The zero eventual contact angle of evaporated droplets and its explanation .....	58
3.6 Contact angle hysteresis and line tension .....	59
3.7 More physical reasons for the contact angle hysteresis on smooth ideal surfaces .....	60
3.8 Contact angle hysteresis on chemically heterogeneous smooth surfaces: the phenomenological approach. Acquaintance with the apparent contact angle .....	61
3.9 The phenomenological approach to the hysteresis of the contact angle developed by Vedantam and Panchagnula .....	62
3.10 The macroscopic approach to the contact angle hysteresis, the model of Joanny and de Gennes .....	63
3.10.1 Elasticity of the triple line .....	63
3.10.2 Contact angle hysteresis in the case of a dilute system of defects .....	66
3.10.3 Surfaces with dense defects and the fine structure of the triple line .....	66
3.11 Deformation of the substrate as an additional source of the contact angle hysteresis .....	68

3.12	How the contact angle hysteresis can be measured	69
3.13	Roughness of the substrate and the contact angle hysteresis	71
3.14	Use of contact angles for characterization of solid surfaces	71
	Appendix 3A. A droplet on an inclined plane	73
	Bullets	74
	References	75
<b>4</b>	<b>Dynamics of wetting</b>	<b>78</b>
4.1	The dynamic contact angle	78
4.2	The dynamics of wetting: the approach of Voinov	78
4.3	The dynamic contact angle in a situation of complete wetting	80
4.4	Dissipation of energy in the vicinity of the triple line	82
4.5	Dissipation of energy and the microscopic contact angle	83
4.6	A microscopic approach to the displacement of the triple line	83
4.7	Spreading of droplets: Tanner's law	84
4.8	Superspreading	85
4.9	Dynamics of filling of capillary tubes	85
4.10	The drag-out problem	87
4.11	Dynamic wetting of heterogeneous surfaces	88
	Bullets	89
	References	90
<b>5</b>	<b>Wetting of rough and chemically heterogeneous surfaces: the Wenzel and Cassie models</b>	<b>92</b>
5.1	General remarks	92
5.2	The Wenzel model	92
5.3	Wenzel wetting of chemically homogeneous curved rough surfaces	94
5.4	The Cassie–Baxter wetting model	96
5.5	The Israelachvili and Gee criticism of the Cassie–Baxter model	97
5.6	Cassie–Baxter wetting in a situation where a droplet partially sits on air	98
5.7	The Cassie–Baxter wetting of curved surfaces	101
5.8	Cassie–Baxter impregnating wetting	101
5.9	The importance of the area adjacent to the triple line in the wetting of rough and chemically heterogeneous surfaces	103

- 5.10 Wetting of gradient surfaces ..... 107
- 5.11 The mixed wetting state ..... 108
- 5.12 Considering the line tension ..... 109
- Appendix 5A. Alternative derivation of the Young, Cassie, and Wenzel  
equations ..... 111
- Bullets ..... 113
- References ..... 114
- 6 Superhydrophobicity, superhydrophilicity, and the rose petal effect** ..... 116
- 6.1 Superhydrophobicity ..... 116
- 6.2 Superhydrophobicity and the Cassie–Baxter wetting regime ..... 117
- 6.3 Wetting of hierarchical reliefs: approach of Herminghaus ..... 119
- 6.4 Wetting of hierarchical structures: a simple example ..... 120
- 6.5 Superoleophobicity ..... 122
- 6.6 The rose petal effect ..... 123
- 6.7 Superhydrophilicity ..... 125
- Bullets ..... 125
- References ..... 126
- 7 Wetting transitions on rough surfaces** ..... 129
- 7.1 General remarks ..... 129
- 7.2 Wetting transitions on rough surfaces: experimental data ..... 129
- 7.3 Time-scaling of wetting transitions ..... 131
- 7.4 Origin of the barrier separating the Cassie and Wenzel wetting states:  
the case of hydrophobic surfaces ..... 132
- 7.4.1 The composite wetting state ..... 132
- 7.4.2 Energy barriers and Cassie, Wenzel, and Young contact  
angles ..... 134
- 7.5 Critical pressure necessary for wetting transition ..... 137
- 7.6 Wetting transitions and de-pinning of the triple line; the dimension  
of a wetting transition ..... 138
- 7.7 The experimental evidence for the 1D scenario of wetting transitions ..... 141
- 7.8 Wetting transitions on hydrophilic surfaces ..... 142
- 7.8.1 Cassie wetting of inherently hydrophilic surfaces: criteria  
for gas entrapping ..... 142
- 7.8.2 Origin of the energetic barrier separating Cassie and Wenzel  
wetting regimes on hydrophilic surfaces ..... 143

7.8.3 Surfaces built of ensembles of balls ..... 146

7.9 Mechanisms of wetting transitions: the dynamics ..... 147

Bullets ..... 148

References ..... 149

**8 Electrowetting and wetting in the presence of external fields** ..... 152

8.1 General remarks ..... 152

8.2 Electrowetting ..... 152

8.3 Wetting in the presence of external fields: a general case ..... 153

Bullets ..... 155

References ..... 155

**9 Nonstick droplets** ..... 156

9.1 General remarks ..... 156

9.2 Leidenfrost droplets ..... 156

9.3 Liquid marbles ..... 158

9.3.1 What are liquid marbles? ..... 158

9.3.2 Liquid marble/support interface ..... 160

9.3.3 Liquid marble/vapor interface ..... 161

9.3.4 Effective surface tension of liquid marbles ..... 161

9.3.5 Scaling laws governing the shape of liquid marbles ..... 162

9.3.6 Properties of liquid marbles: the dynamics ..... 163

9.3.7 Actuation of liquid marbles with electric and magnetic fields ..... 164

9.3.8 Applications of liquid marbles ..... 165

9.4 Nonstick drops bouncing a fluid bath ..... 165

Bullets ..... 166

References ..... 166

Index ..... 169
