Preface XI

1	Introduction	1
1.1	<i>Irreversibility: The Arrow of Time</i>	2
1.1.1	Dynamical Systems	3
1.1.2	Thermodynamics	7
1.1.3	Ensembles and Probability Distribution	9
1.1.4	Entropy in Equilibrium Systems	11
1.1.5	Fundamental Time Arrows, Units	14
1.1.6	Example: Ideal Quantum Gases	17
1.2	<i>Thermodynamics of Irreversible Processes</i>	19
1.2.1	Quasiequilibrium	19
1.2.2	Statistical Thermodynamics with Relevant Observables	22
1.2.3	Phenomenological Description of Irreversible Processes	25
1.2.4	Example: Reaction Rates	29
1.2.5	Principle of Weakening of Initial Correlations and the Method of Nonequilibrium Statistical Operator	31
	<i>Exercises</i>	38
2	Stochastic Processes	41
2.1	<i>Stochastic Processes with Discrete Event Times</i>	42
2.1.1	Potentiality and Options, Chance and Probabilities	43
2.1.2	Stochastic Processes	46
2.1.3	Reduced Probabilities	50
2.1.4	Properties of Probability Distributions: Examples	54
2.1.5	Example: One-Step Process on a Discrete Space–Time Lattice and Random Walk	58
2.2	<i>Birth-and-Death Processes and Master Equation</i>	61
2.2.1	Continuous Time Limit and Master Equation	63
2.2.2	Example: Radioactive Decay	67
2.2.3	Spectral Density and Autocorrelation Functions	69
2.2.4	Example: Continuum Limit of Random Walk and Wiener Process	76
2.2.5	Further Examples for Stochastic One-Step Processes	78

2.2.6	Advanced Example: Telegraph Equation and Poisson Process	84
2.3	<i>Brownian Motion and Langevin Equation</i>	89
2.3.1	Langevin Equation	89
2.3.2	Solution of the Langevin Equation by Fourier Transformation	94
2.3.3	Example Calculations for a Langevin Process on Discrete Time	95
2.3.4	Fokker–Planck Equation	96
2.3.5	Application to Brownian Motion	105
2.3.6	Important Continuous Markov Processes	107
2.3.7	Stochastic Differential Equations and White Noise	109
2.3.8	Applications of Continuous Stochastic Processes	110
	<i>Exercises</i>	113
3	Quantum Master Equation	117
3.1	<i>Derivation of the Quantum Master Equation</i>	119
3.1.1	Open Systems Interacting with a Bath	119
3.1.2	Derivation of the Quantum Master Equation	124
3.1.3	Born–Markov and Rotating Wave Approximations	127
3.1.4	Example: Harmonic Oscillator in a Bath	132
3.1.5	Example: Atom Coupled to the Electromagnetic Field	135
3.2	<i>Properties of the Quantum Master Equation and Examples</i>	138
3.2.1	Pauli Equation	138
3.2.2	Properties of the Pauli Equation, Examples	143
3.2.3	Discussion of the Pauli Equation	146
3.2.4	Example: Linear Coupling to the Bath	148
3.2.5	Quantum Fokker–Planck Equation	151
3.2.6	Quantum Brownian Motion and the Classical Limit	154
	<i>Exercises</i>	156
4	Kinetic Theory	157
4.1	<i>The Boltzmann Equation</i>	158
4.1.1	Distribution Function	159
4.1.2	Classical Reduced Distribution Functions	163
4.1.3	Quantum Statistical Reduced Distribution Functions	166
4.1.4	The Stoßzahlansatz	169
4.1.5	Derivation of the Boltzmann Equation from the Nonequilibrium Statistical Operator	173
4.1.6	Properties of the Boltzmann Equation	180
4.1.7	Example: Hard Spheres	181
4.1.8	Beyond the Boltzmann Kinetic Equation	183
4.2	<i>Solutions of the Boltzmann Equation</i>	186
4.2.1	The Linearized Boltzmann Equation	187
4.2.2	Relaxation Time Method	189
4.2.3	The Kohler Variational Principle	194
4.2.4	Example: Thermal Conductivity in Gases	196

4.3	<i>The Vlasov–Landau Equation and Hydrodynamic Equations</i>	199
4.3.1	Derivation of the Vlasov Equation	199
4.3.2	The Landau Collision Term	201
4.3.3	Example for the Vlasov Equation: The RPA Dielectric Function	203
4.3.4	Equations of Hydrodynamics	206
4.3.5	General Remarks to Kinetic Equations	213
	<i>Exercises</i>	214
5	Linear Response Theory	217
5.1	<i>Linear Response Theory and Generalized Fluctuation–Dissipation Theorem (FDT)</i>	218
5.1.1	External Fields and Relevant Statistical Operator	219
5.1.2	Nonequilibrium Statistical Operator for Linear Response Theory	222
5.1.3	Response Equations and Elimination of Lagrange Multipliers	225
5.1.4	Example: Ziman Formula for the Conductivity and Force–Force Correlation Function	226
5.1.5	The Choice of Relevant Observables and the Kubo Formula	230
5.2	<i>Generalized Linear Response Approaches</i>	235
5.2.1	Thermal Perturbations	236
5.2.2	Example: Thermoelectric Effects in Plasmas	239
5.2.3	Example: Hopping Conductivity of Localized Electrons	243
5.2.4	Time-Dependent Perturbations	246
5.2.5	Generalized Linear Boltzmann Equation	249
5.2.6	Variational Approach to Transport Coefficients	251
5.2.7	Further Results of Linear Response Theory	254
	<i>Exercises</i>	259
6	Quantum Statistical Methods	261
6.1	<i>Perturbation Theory for Many-Particle Systems</i>	262
6.1.1	Equilibrium Statistics of Quantum Gases	262
6.1.2	Three Relations for Elementary Perturbation Expansions	267
6.1.3	Example: Equilibrium Correlation Functions in Hartree–Fock Approximation	274
6.2	<i>Thermodynamic Green’s Functions</i>	279
6.2.1	Thermodynamic Green’s Functions: Definitions and Properties	280
6.2.2	Green’s Function and Spectral Function	285
6.2.3	Example: Thermodynamic Green’s Function for the Ideal Fermi Gas	289
6.2.4	Perturbation Theory for Thermodynamic Green’s Functions	291
6.2.5	Application of the Diagram Rules: Hartree–Fock Approximation	297
6.3	<i>Partial Summation and Many-Particle Phenomena</i>	300
6.3.1	Mean-Field Approximation and Quasiparticle Concept	301
6.3.2	Dyson Equation and Self-Energy	304
6.3.3	Screening Equation and Polarization Function	307

6.3.4	Lowest Order Approximation for the Polarization Function: RPA	312
6.3.5	Bound States	314
6.3.6	Excursus: Solution to the Two-Particle Schrödinger Equation with a Separable Potential	318
6.3.7	Cluster Decomposition and the Chemical Picture	324
6.4	<i>Path Integrals</i>	329
6.4.1	The Onsager–Machlup Function	329
6.4.2	Dirac Equation in 1 + 1 Dimensions	332
	<i>Exercises</i>	335
7	Outlook: Nonequilibrium Evolution and Stochastic Processes	337
7.1	<i>Stochastic Models for Quantum Evolution</i>	338
7.1.1	Measuring Process and Localization	339
7.1.2	The Caldeira–Leggett Model and Quantum Brownian Motion	342
7.1.3	Dynamical Reduction Models	345
7.1.4	Stochastic Quantum Electrodynamics	347
7.1.5	Quantum Dynamics and Quantum Evolution	349
7.2	<i>Examples</i>	353
7.2.1	Scattering Theory	353
7.2.2	Bremsstrahlung Emission	355
7.2.3	Radiation Damping	359
7.2.4	The $1/f$ (Flicker) Noise	360
7.2.5	The Hydrogen Atom in the Radiation Field	362
7.2.6	Comments on Nonequilibrium Statistical Physics	365
	References	371
	Index	375
