Part I: Topics in Discrete Biomathematics

1	Discrete Information and Life	3
1.1	Symbols and Molecules	3
1.1.1	Molecules and Protocells	6
1.2	Sequences and Polymers	7
1.2.1	LUCA and the Sequence Paradox	8
1.3	Multisets and Membranes	9
1.4	Chemistry Multisets	10
1.5	Liposome Membranes	12
1.6	Populations and Hypermultisets	15
1.7	Trees and Hierarchies	18
1.8	Graphs and Interactions	20
1.8.1	Graphs of Molecule Structures	20
1.8.2	Graphs of Reactions	22
1.8.3	Neuron Graph	24
2	Strings and Genomes	27
2.1	Biological Monomers and Polymers	27
2.2	DNA Strings and DNA Helix	28
2.2.1	DNA Notation and Double String Operations	29
2.2.2	DNA Helix	33
2.3	DNA Pool Operations	43
2.3.1	Writing and Reading DNA	47
2.3.2	Plasmide Cloning Algorithm	48
2.4	DNA Computing	50
2.4.1	Adleman's Experiment	51
2.5	PCR and XPCR Protocols	56
2.5.1	XPCR	64
2.5.2	DNA Extraction by <i>XPCR</i>	65
2.5.3	DNA Recombination by <i>XPCR</i>	66

2.6	L-Systems and Morphogenesis	68
2.6.1	String Models and Theories	73
2.7	Membrane Computing	75
2.8	Informational Analysis of Genomes	81
3	Algorithms and Biorhythms	107
3.1	Metabolic Grammars	107
3.1.1	Lotka-Volterra Dynamics	114
3.1.2	The Brusselator (Belousov-Zhabotinsky Reaction)	115
3.2	Time Series and Inverse Dynamics	116
3.3	Metabolic Approximation	119
3.3.1	Goniometricus: A Metabolic Grammar of Sine and Cosine	121
3.3.2	Generalization of the Goniometricus Model	122
3.4	Stoichiometric Expansion and Stepwise Regression	123
3.4.1	Log-Gain Principle	129
3.4.2	The Stepwise Regression LGSS	130
3.4.3	Problems Related to the Regression with LGSS	135
3.4.4	Models of Mitosis	136
3.5	Reactivity and Inertia	138
3.6	Metabolic Patterns	143
3.7	Metabolic Oscillators	147
3.7.1	Anabolism and Catabolism	154
3.8	The Ubiquity of Metabolism	158
3.8.1	Metabolic Computing	162
3.8.2	Revisiting MP Grammars	166
4	Life Strategies	169
4.1	The Enzymatic Paradox	169
4.1.1	Genes and Proteins	172
4.2	Bio-inspired Algorithms	179
4.3	Replication and Autopoiesis	183
4.4	Main Informational Steps from LUCA to OVUM	185
4.5	Life Analysis and Synthesis	191
4.6	Life Evolution	198
4.7	Time's Arrow and Complexity	199
4.8	Life and Computation	208
Part II: Discrete Mathematical Backgrounds		
5	Numbers and Measures	215
5.1	Sets and Functions	215
5.1.1	Relations and Operations	216
5.1.2	Functions and Variables	217
5.2	Numbers and Digits	219
5.2.1	Natural Numbers	220

- 5.2.2 Sums and Positional Representations 221
 - 5.2.3 Integer Numbers 223
- 5.3 Rational and Real Numbers: Approximation and Infinite 224
 - 5.3.1 Incommensurability, Divisibility, and Distinguishability . . . 225
- 5.4 Complex Numbers and Real Vectors 231
 - 5.4.1 Euler’s Identity 231
 - 5.4.2 Polar Representation of Complex Numbers 234
 - 5.4.3 Some of Euler’s Jewels 237
- 5.5 Induction and Recurrence 239
 - 5.5.1 Fibonacci Sequence 245
 - 5.5.2 Arithmetic and Logic 248
 - 5.5.3 A Glimpse of the History of Formal Logic 253
- 5.6 Series and Growths 254
 - 5.6.1 Arithmetical Progressions 254
 - 5.6.2 Figurate Numbers 255
 - 5.6.3 Geometrical Progressions 258
 - 5.6.4 Logistic Maps 259
 - 5.6.5 Natural Exponential Growth 261
 - 5.6.6 Asymptotic Orders and Infinitesimals 262
- 5.7 Scales of Time, Space, and Matter 264
- 5.8 Discrete Dynamical Systems 268

6 Languages and Grammars 273

- 6.1 Strings and Languages 273
- 6.2 Grammars and Chomsky Hierarchy 277
- 6.3 Regular Expressions and Finite Automata 282
- 6.4 Patterns and Rules 290
- 6.5 Turing Machine 293
- 6.6 Decidability and Undecidability 297
- 6.7 Register Machines 300
- 6.8 Information, Codes, and Entropy 302
 - 6.8.1 Shannon’s Entropy 302
 - 6.8.2 Optimal Codes and Compression 303
 - 6.8.3 Typicality and Transmission 306

7 Combinations and Chances 309

- 7.1 Factorials and Binomial Coefficients 309
 - 7.1.1 Permutations and Arrangements 310
 - 7.1.2 Combinations and Binomial Coefficients 311
 - 7.1.3 Inductive Derivation of Binomial Coefficients 312
- 7.2 Distributions and Discrete Probability 314
- 7.3 Allocations and Partitions 317
 - 7.3.1 Multinomial Coefficients 317
 - 7.3.2 Partitions and Multisets 318
 - 7.3.3 Integer Partitions 319

7.4	Stirling, Bell, Catalan, and Bernoulli Numbers	323
7.4.1	Stirling and Bell Numbers	323
7.4.2	Catalan Numbers	324
7.4.3	Bernoulli Numbers	325
7.5	Stirling Approximation	326
7.6	“Ars Conjectandi” and Statistical Tests	328
7.6.1	Statistics and Probability	329
7.6.2	Statistical Inference	333
7.6.3	Sample Significance Indexes	337
7.7	Least Square Approximation	338
7.7.1	The k -Variable Multiple Regression Model	340
7.7.2	The Classical Stepwise Regression	345
7.8	Trees and Graphs	347
7.8.1	Types of Trees	348
7.8.2	Types of Graphs	350
7.8.3	Graph Planarity and Colorability	352
7.8.4	Pointers and Graphs	358
7.8.5	Parentheses and Tags	358
7.8.6	Tree Enumerations	362
7.8.7	Binary Trees	365
7.8.8	Phylogenetic Trees	365
	References	369
