

# Table of Contents

<b>Introduction</b> ( <i>M. Lucertini, A. Millán Gasca, F. Nicolò</i> ) .....	VIII
1 Technology as Knowledge: The Case of Modern Engineering Systems .....	VIII
2 Scientific Planning and Control: From Manufacturing to Organizational Systems .....	IX
3 The Interaction Between Mathematical Models and Technological Concepts in 20 <sup>th</sup> Century Technology .....	XI
 <b>Part I Mathematical Methods and Technological Thought: Historical Aspects</b>	
<b>1 Mathematical Methods in Preindustrial Technology and Machines</b> ( <i>Eberhard Knobloch</i> ) .....	3
1.1 Renaissance Architects-Engineers .....	4
1.2 Steps Towards Scientific Technology and Technical Mechanics .....	9
1.3 The Achievements of Leonardo da Vinci .....	12
1.4 Engineers of the 16 <sup>th</sup> century .....	15
 <b>2 Organization and Mathematics: A Look into the Prehistory of Industrial Engineering</b> ( <i>Ana Millán Gasca</i> ) .....	21
2.1 A New Branch of Engineering Science .....	22
2.2 Quantitative Studies and Labour and Production Organization: The Early Attempts between the 18 <sup>th</sup> and 19 <sup>th</sup> Centuries .....	28
2.3 Rationality and Mathematization .....	32
2.4 Measurement Mathematical and Techniques: The Birth of Industrial Engineering .....	38
2.5 A Fresh Start: The Birth of Operations Research .....	41
 <b>3 Technological Innovation and New Mathematics:</b> <b>van der Pol and the Birth of Nonlinear Dynamics</b> ( <i>Giorgio Israel</i> ) .....	52
3.1 Radio Waves and Mathematical Modeling .....	52
3.2 From Radio to Limit Cycles .....	54
3.3 The Contribution of the Soviet School .....	63
3.4 The Heartbeat "Model" .....	66
3.5 Concluding Remarks .....	72
Appendix: Two Unpublished Letters Written by Balthasar van der Pol to Vito Volterra .....	77

<b>4</b>	<b>Trasferring Formal and Mathematical Tools from War Management to Political, Technological, and Social Intervention (1940–1960)</b> ( <i>Amy Dahan and Dominique Pestre</i> ) .....	79
4.1	Operational Research and Mathematicians' Mobilization in World War II .....	80
4.2	Mathematical Tools for Managing Social and/or Complex Systems ...	83
4.3	An Emblematic Site for the Deployment of these Tools: The RAND Corporation .....	86
4.4	On a Few Characters of these New Scientific Modes .....	89
4.5	Three Short Remarks as Way of Conclusion .....	92
 <b>Part II Technological Knowledge and Mathematical Models in the Analysis, Planning, and Control of Modern Engineering Systems</b>		
<b>5</b>	<b>Technological Concepts and Mathematical Models in the Evolution of Control Engineering</b> ( <i>Stuart Bennett</i> ) .....	103
5.1	Regulators and Servomechanism .....	103
5.2	Models in Control Engineering .....	104
5.3	Model Representations .....	108
5.4	Determination of Stability of a System .....	110
5.5	External Models: Impulse and Frequency Response .....	112
5.6	Stochastic and Sampled-Data Signals .....	117
5.7	State Space Models and Optimal Control .....	119
5.8	System Identification .....	121
5.9	Conclusion .....	122
<b>6</b>	<b>Feedback: A Technique and a “Tool for Thought”</b> ( <i>Antonio Lepschy and Umberto Viaro</i> ) .....	129
6.1	Basic Elements of a Feedback Control System .....	129
6.2	Feedback Models of Some Technological Systems: Were their Inventors Aware of Such a Structure? .....	131
6.3	Feedback Loops in Mathematics and Computer Science .....	136
6.4	The Role of Feedback in Explanatory Models .....	139
6.5	Concluding Remarks .....	153

<b>7 Adequacy of Mathematical Models in Control Theory, Physics, and Environmental Science</b> ( <i>Eugenii F. Mishchenko, Alexandr S. Mishchenko, and Mikhail I. Zelikin</i> ) .....	156
7.1 Mathematical Models of Technological Processes .....	158
7.2 Mathematical Modeling of Environmental Processes: Fluctuations in the Level of the Caspian Sea .....	163
7.3 Mathematical Simulation in the Civil Engineering Design of the Leningrad Dam .....	172
7.4 Mathematical Simulation of Physical Processes .....	183
<b>8 The Development of Systems Science: Concepts of Knowledge as Seen from the Western and Eastern Perspective</b> ( <i>Andrzej Wierzbicki</i> ) .....	189
8.1 Historical Perspective: <i>Hard</i> versus <i>Soft</i> Systems Science .....	190
8.2 Information Civilization: Megatrends and Challenges .....	196
8.3 Diverse Concepts of Knowledge .....	199
8.4 The Importance and Typical Forms of Mathematical Models Expressing Knowledge .....	201
8.5 An Example: Computerized Decision Support Systems .....	204
<b>9 Coping With Complexity in the Management of Organized Systems</b> ( <i>Mario Lucertini</i> ) .....	221
9.1 Forms of Complexity .....	222
9.2 The Forms of Simplification .....	224
9.3 Decentralized Management of Complex Organizations .....	229
9.4 Open Systems .....	232
<b>Index of Names</b> .....	239
<b>Authors</b> .....	246
