Part I Theory
Fernando Sansò

1 The Forward Modelling of the Gravity Field 3
1.1 Outline of the Chapter 3
1.2 Newton's Gravitation Law 4
1.3 The Newtonian Gravitational Attraction of Bodies 5
1.4 The Gravity Field 14
1.5 Gauss, Poisson, Laplace 16
1.6 Dirichlet, Green 20
1.7 Elements of Geometry of the Gravity Field and Related Definitions 21
1.8 The Laplace Operator in Curvilinear Coordinates 30
1.9 Simple Mathematical Models of the Gravity Field 35
1.10 Anomalous Quantities of the Gravity Field and a More Precise Definition of the Geoid 43
1.11 Summary of Height Systems and Their Relation to the Geodetic Datum 53
1.12 Exercises 57
Appendix 63
A.1 63
A.2 64
A.3 66
A.4 68

2 Observables of Physical Geodesy and Their Analytical Representation 73
2.1 Outline of the Chapter 73
2.2 Observables and Observation Equations: Linearization 75
2.3 The Linearized Observation Equations of Physical Geodesy 80

Bibliografische Informationen
http://d-nb.info/985455519

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.4 On the Relation Between Height Anomalies and Geoid Undulations ... 91
2.5 The Remove–Restore Concept ... 94
2.6 The Spherical Approximation Procedure ... 97
2.7 A Review of Observation Equations with Unknown Reference Potential ... 101
2.8 Exercises ... 104
Appendix ... 105
A.1 ... 105
A.2 ... 107

3 Harmonic Calculus and Global Gravity Models ... 111
3.1 Outline of the Chapter ... 111
3.2 The Newton Integral Representation of the Anomalous Potential ... 113
3.3 Legendre Functions ... 117
3.4 Spherical Harmonics ... 124
3.5 Downward Continuation and Krarup's Theorem ... 135
3.6 Ellipsoidal Harmonics ... 138
3.7 Global Models as Approximate Solution of Boundary Value Problems ... 145
3.8 Commission and Omission Errors. Kaula's Rule ... 151
3.9 Exercises ... 161
Appendix ... 162
A.1 ... 162
A.2 ... 164
A.3 ... 165
A.4 ... 167

4 The Local Modelling of the Gravity Field: The Terrain Effects ... 169
4.1 Outline of the Chapter ... 169
4.2 High Accuracy and High Resolution Local Gravity Model ... 170
4.3 The Smoothing Role of Terrain Correction (TC) ... 174
4.4 From Terrain Correction (TC) to Residual Terrain Correction (RTC) ... 179
4.5 Strategies for the Implementation of Terrain Effects ... 185
4.6 Comparisons and Interpretations ... 191
4.7 An Open Issue ... 195
4.8 Exercises ... 197
Appendix ... 199
A.1 ... 199

5 The Local Modelling of the Gravity Field by Collocation ... 203
5.1 Outline of the Chapter ... 203
5.2 An Introduction to the Problem ... 204

5.3 The Principle of Minimum Square Invariant Prediction Error by a Simple Example 206
5.4 On Collocation Theory, or the Wiener-Kolmogorov Principle Applied in Physical Geodesy 212
5.5 The General Collocation Problem 216
5.6 Covariance and Spectral Harmonic Calculus 222
5.7 The Estimate of Global Covariance Functions 228
5.8 The Estimate of Local Covariance Functions 231
5.9 Covariance Parametric Models 237
5.10 The Least Squares Collocation (l.s.c.) Solution 240
5.11 On the Optimal Combination of Global Coefficients and Local Observations 244
5.12 Exercises 251
Appendix 255
A.1 255
A.2 256

Part II Methods and Applications

6 Global Gravitational Models 261
6.1 Outline of the Chapter 261
6.2 Introduction 262
6.2.1 Local and Regional Gravimetric Models 264
6.2.2 Global Versus Local Gravimetric Models: Similarities and Differences 264
6.3 Signal Representation and Data Characteristics 265
6.4 The New Satellite Missions 269
6.5 Beyond the Sensitivity of Satellite Data 274
6.6 State-of-the-Art Global Gravitational Modeling 277
6.6.1 EGM96 279
6.6.2 EGM2008 293
6.7 Data Requirements and Data Availability 304
6.7.1 Elevation Data 304
6.7.2 Terrestrial Gravity Anomaly Data 305
6.7.3 Altimetry-Derived Gravity Anomalies 306
6.7.4 The Merged $5' \times 5'$ Area-Mean Gravity Anomaly File 306
6.8 Use of Global Gravitational Models and of Their By-Products 307
6.9 Temporal Variations 309
6.10 Outlook 309

7 Geoid Determination by 3D Least-Squares Collocation 311
7.1 Outline of the Chapter 311
7.2 Introduction 311

7.3 Theory 312
7.4 The Remove-Restore Method 316
7.5 Covariance Function Estimation and Representation 319
7.6 Conversion from Geoid Heights to Height Anomalies 324
7.7 LSC Geoid Determination from Residual Data 325
7.8 Conclusion 329

8 Topographic Reductions in Gravity and Geoid Modeling 337
8.1 Outline of the Chapter 337
8.2 Introduction 338
8.3 Topographic Reductions and Gravity Field Modeling 340
8.3.1 The Potential and the Attraction of the Earth's Topography 340
8.3.2 Terrain Reductions for Gravity Densification and Gridding 343
8.3.3 Topographic/Isostatic Effects on Gravity and Airborne Gravity and Gradiometry 353
8.3.4 Terrain Reductions and Physical Heights 356
8.3.5 The Treatment of the Topography in Geoid and Quasi-geoid Determination 357
8.4 Terrain Effects in Geoid and Quasi-geoid Determination 363
8.4.1 Helmert's Second Method of Condensation 363
8.4.2 Rudzki's Inversion Scheme 365
8.4.3 Residual Terrain Model (RTM) 366
8.4.4 Terrain Effects and High-Resolution Global Geopotential Models 369
8.4.5 The Remove-Restore Methodology and the Different Reduction Schemes 371
8.5 Methods for the Numerical Estimation of Direct and Indirect Topographic Effects 374
8.5.1 The Mass Prism Topographic Model and the Numerical Integration Method (NIM) 376
8.5.2 The Fast Fourier Transform (FFT) Method 380
8.6 Numerical Examples 385
8.6.1 Effects of Terrain Reductions on Gravity Anomalies and Geoid Heights 386
8.6.2 Determination and Evaluation of Gravimetric Geoid Models 391
8.7 Summary and Concluding Remarks 398

9 Marine Gravity and Geoid from Satellite Altimetry 401
9.1 Outline of the Chapter 402
9.2 Altimetry Data 403
9.3 Retracking 405

9.4 Sea Surface Height Observations 407
9.4.1 Mean Sea Surface and Mean Dynamic Topography 410
9.4.2 Remove-Restore for Satellite Altimetry 412
9.4.3 Dynamic Sea Surface Topography 412
9.5 Crossover Adjustment 413
9.6 Data Editing, Data Quality and Error-Budget 418
9.7 Gravity Recovery from Altimetry 421
9.8 Least Squares Collocation for Altimetry 422
9.8.1 Interpolation Using Least Squares Collocation 425
9.9 Deterministic Methods 426
9.10 Fast Spectral Methods for Altimetric Gravity Prediction 428
9.10.1 Fast Fourier Techniques for Altimetric Gravity 429
9.10.2 Filtering 431
9.11 Practical Computation of Global High Resolution Marine Gravity 432
9.11.1 North Sea Example 436
9.12 Accuracy of Present-Day Altimetric marine Gravity Fields 439
9.13 Integrating Marine, Airborne and Satellite Derived Gravity 441
9.13.1 East Greenland Airborne and Altimetric Gravity Example 442
9.14 Altimetric Gravity Research Frontiers 443
9.14.1 ICESat and Cryosat-2 444
9.14.2 Altimeter Range Corrections 445
9.14.3 Ocean Tides 446
9.14.4 Retracking in Coastal and Polar Regions 447
Appendix A Data Resources 450
A.1 Altimetry Data 450
A.2 Altimetric Gravity Field Resources 450

10 Geoid Determination by FFT Techniques 453
10.1 Outline of the Chapter 453
10.2 Review of Stokes's Integral and Its Evaluation 454
10.2.1 Stokes's Boundary Value Problem 454
10.2.2 Geoid Undulations and Terrain Reductions 455
10.2.3 Practical Evaluation of Stokes's Integral 457
10.2.4 The Need for Spectral Techniques 459
10.3 Geoid Undulations by FFT 460
10.3.1 Planar Approximation of Stokes's Integral 460
10.3.2 Spherical Form of Stokes's Integral 464
10.3.3 Elimination of Edge Effects and Circular Convolution ... 467
10.4 FFT-Evaluation of Terrain Effects 468
10.4.1 2D Formulas for Terrain Effects 468
10.4.2 Terrain Corrections by 3D FFT 473
10.5 Optimal Spectral Geoid Determination 476
10.5.1 Error Propagation 476

10.6 Other Examples of FFT Evaluation of Geodetic Operators 478
10.6.1 The Vening Meinesz Integral 478
10.6.2 The Analytical Continuation Integrals 479
10.6.3 The Inverse Stokes and Inverse Mening Meinesz Formulas 480
10.7 Concluding Remarks 481
Appendix 483
A.1 Basic Definitions 483
A.1.1 Sinusoids 483
A.1.2 Fourier Series 483
A.2 The Continuous Fourier Transform and Its Properties 485
A.2.1 Definition of the Continuous Fourier Transform 485
A.2.2 The Impulse Function 486
A.2.3 The Rectangle and the Sinc Functions 488
A.2.4 Interpretation of the Fourier Transform and the Fourier Series 489
A.2.5 Properties of the CFT 489
A.2.6 Convolution and Correlation 490
A.3 The Discrete Fourier Transform 493
A.3.1 From the Continuous to the Discrete Fourier Transform: Aliasing and Leakage 493
A.3.2 Discrete Convolution and Correlation: Circular Convolution and Correlation 496
A.3.3 Correlation, Covariance, and Power Spectral Density Functions 498
A.3.4 The DFT in Computers 500
A.3.5 The Fast Fourier Transform 502
A.4 The Two-Dimensional Discrete Fourier Transform 503
A.5 Efficient DFT for Real Functions 505
A.5.1 DFT of Two Real Functions Via a Single FFT 505
A.5.2 Simultaneous Convolution of Two Real Functions with the Same Function 506
A.6 Use of the Fast Hartley Transform 507
A.6.1 The Discrete Hartley Transform 508
A.6.2 Definition of the 1D Discrete Hartley Transform 508
A.6.3 Definition of the 2D Discrete Hartley Transform 509
A.6.4 Properties of the Discrete Hartley Transform 509
A.7 Relationship Between the DHT and the DFT 514
A.7.1 Computation of the 1D DFT Via the 1D DHT 514
A.7.2 Computation of the 2D DFT Via the 2D DHT 515
A.7.3 Advantages Unique to the FHT 516

11 Combination of Heights 517
11.1 Outline of the Chapter 517
11.2 Introduction 517
11.3 Why Combine Geoid, Orthometric and Ellipsoidal Height Data? 520
11.3.1 Modernizing Regional Vertical Datums 520
11.3.2 Global Vertical Datum 523
11.3.3 GNSS-Levelling 523
11.3.4 Refining and Testing Gravimetric Geoid Models 524
11.4 Least-Squares Adjustment Methodology for Combining Heights 525
11.5 Application of MINQUE to the Combined Height Adjustment Problem 528
11.6 Role of the Parametric Model 531
11.6.1 Modelling Options 534
11.6.2 Semi-automated Assessment Procedure 535
11.6.3 Numerical Example 539
11.7 Remarks 543

Part III Advanced Analysis Methods
Fernando Sansò

12 Hilbert Spaces and Deterministic Collocation 547
12.1 Outline of the Chapter 547
12.2 An Introduction to Hilbert Spaces 548
12.3 Orthogonality, Duality, Bases 555
12.4 Hilbert Spaces with Reproducing Kernel 568
12.5 Exercises 583

13 On Potential Theory and HS of Harmonic Functions 591
13.1 Outline of the Chapter 591
13.2 Harmonic Functions and Harmonic Polynomials 592
13.3 Spherical Harmonics 603
13.4 Hilbert Spaces of Harmonic Functions and First Theorems of Potential Theory 612
13.5 Green's Function and Krarup's Theorem 627
13.6 Exercises 640

14 A Quick Look to Classical Boundary Value Problems (BVP) Solutions 645
14.1 Outline of the Chapter 645
14.2 The Classical Molodensky Approach: A Historical Excursus 645
14.3 The Approximate Solution of Molodensky's Problem by Downward Continuation 647
14.4 On the Local Use of Molodensky's Formula 652
14.5 The Helmert Approach: A Short Review 657
14.6 Exercises 659

15 The Analysis of Geodetic Boundary Value Problems in Linear form 663
15.1 Outline of the Chapter 663
15.2 A Precise Definition of the Two Main BVP's and of Their Solution Spaces 666
15.3 Linearized Molodensky's Problem 672
15.4 The Analysis of the Linearized Fixed Boundary BPV 681
15.5 From Least Squares to Galerkin's Method 683
15.6 Two Geodetic Solutions of Galerkin's System 693
15.7 New Data Sets from Spatial Gravity Surveying 701
15.8 Exercises 704

References 707
