1	Supersonic Molecular Beams Studies of Surfaces	1
	Luca Vattuone, Gianangelo Bracco, Marco Smerieri, Letizia Savio, and Mario Rocca	
1.1	Introduction	1
1.2	Principles of Supersonic Molecular Beams	2
1.3	Adsorption Studies: The King and Wells Method	6
1.4	Supersonic Molecular Beams of Rotationally Aligned Molecules	9
1.5	Combining Supersonic Molecular Beams and Spectroscopy Methods	12
1.6	Supersonic Molecular Beams Coupled to Scanning Probe Microscopies	14
1.7	Supersonic Molecular Beams and Oxide Film Growth.....	18
1.8	Supersonic Deposition of Organic Molecules	19
1.9	Conclusions and Perspectives.....	21
	References	21
2	Potential Energy Surfaces for the Dynamics of Elementary Gas-Surface Processes	25
	Pablo Gamallo, Ludovic Martin-Gondre, Ramón Sayós, Cédric Crespos, and Pascal Larrégaray	
2.1	Introduction	25
2.2	PES from Analytical Fitting Schemes	27
2.2.1	Periodic London-Eyring-Polanyi-Sato Function	27
2.2.2	Flexible Periodic London-Eyring-Polanyi- Sato function	29
2.2.3	Reactive Bond-Order Potentials	30
2.2.4	Other Analytical Expressions	32
2.3	PES from Numerical Interpolation Schemes	33
2.3.1	Corrugation Reducing Procedure	33
2.3.2	Modified Shepard Interpolation	37

2.3.3	Neural Networks	41
2.4	Summary and Outlook	45
	References	46
3	Thermal Energy Atomic and Molecular Beam Diffraction from Solid Surfaces	51
	Daniel Farías and Rodolfo Miranda	
3.1	Introduction	51
3.2	Theory Background	53
3.2.1	Atomic Beam Diffraction	53
3.2.2	H ₂ Beam Diffraction	55
3.2.3	Calculation of Diffraction Intensities	56
3.2.4	He and Ne Diffraction	56
3.2.5	H ₂ Beam Diffraction	57
3.3	Experimental	58
3.3.1	General Requirements for High-Resolution Diffraction	58
3.4	Extraction of Diffraction Intensities from Experiment	61
3.5	Results	62
3.5.1	He and Ne Diffraction Results	62
3.5.2	H ₂ and D ₂ Diffraction Results	64
3.6	Outlook	69
