

Contents

From quantum mechanics to force fields: new methodologies for the classical simulation of complex systems.....	1
Jean-Philip Piquemal, Kenneth D. Jordan	
Polarisable multipolar electrostatics from the machine learning method Kriging: an application to alanine.....	3
Matthew J. L. Mills, Paul L. A. Popelier	
Optimization of the explicit polarization (X-Pol) potential using a hybrid density functional	19
Jaebeom Han, Donald G. Truhlar, Jiali Gao	
Analytic gradient and molecular dynamics simulations using the fragment molecular orbital method combined with effective potentials.....	35
Takeshi Nagata, Dmitri G. Fedorov, Kazuo Kitaura	
Density-functional expansion methods: grand challenges	51
Timothy J. Giese, Darrin M. York	
The polarizing forces of water	69
Revati Kumar, Thomas Keyes	
Polarization effects in protein–ligand calculations extend farther than the actual induction energy.....	79
Pär Söderhjelm	
Recent applications and developments of charge equilibration force fields for modeling dynamical charges in classical molecular dynamics simulations	91
Brad A. Bauer, Sandeep Patel	
A distributed point polarizable force field for carbon dioxide	107
Fang-Fang Wang, Revati Kumar, Kenneth D. Jordan	
Toward accurate solvation dynamics of lanthanides and actinides in water using polarizable force fields: from gas-phase energetics to hydration free energies	115
Aude Marjolin, Christophe Gourelaouen, Carine Clavaguéra, Pengyu Y. Ren, Johnny C. Wu, Nohad Gresh, Jean-Pierre Dognon, Jean-Philip Piquemal	

Automation of AMOEBA polarizable force field parameterization for small molecules	129
Johnny C. Wu, Gaurav Chattree, Pengyu Ren	
How polarization damping affects ion solvation dynamics	141
Elvira Guàrdia, Ausias March Calvo, Marco Masia	
Achieving fast convergence of ab initio free energy perturbation calculations with the adaptive force-matching method	149
Eric R. Pinnick, Camilo E. Calderon, Andrew J. Rusnak, Feng Wang	
A coarse-grained model for β-D-glucose based on force matching	161
Sergiy Markutsya, Yana A. Kholod, Ajitha Devarajan, Theresa L. Windus, Mark S. Gordon, Monica H. Lamm	
CL&P: A generic and systematic force field for ionic liquids modeling	177
José N. Canongia Lopes, Agílio A. H. Pádua	
Including many-body effects in models for ionic liquids	189
Mathieu Salanne, Benjamin Rotenberg, Sandro Jahn, Rodolphe Vuilleumier, Christian Simon, Paul A. Madden
