

# Applied Bacteriology and Biotechnology .....1

|                                                                                                                                                           |            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>1 Organic Acid and Solvent Production: Acetic, Lactic, Gluconic, Succinic, and Polyhydroxyalkanoic Acids</b> .....                                     | <b>3</b>   |
| <i>Palmer Rogers · Jiann-Shin Chen · Mary Jo Zidwick</i>                                                                                                  |            |
| <b>2 Organic Acid and Solvent Production: Butanol, Acetone, and Isopropanol; 1,3- and 1,2-Propanediol Production; and 2,3-Butanediol Production</b> ..... | <b>77</b>  |
| <i>Jiann-Shin Chen · Mary Jo Zidwick · Palmer Rogers</i>                                                                                                  |            |
| <b>3 Organic Acid and Solvent Production: Propionic and Butyric Acids and Ethanol</b> .....                                                               | <b>135</b> |
| <i>Mary Jo Zidwick · Jiann-Shin Chen · Palmer Rogers</i>                                                                                                  |            |
| <b>4 Amino Acid Production</b> .....                                                                                                                      | <b>169</b> |
| <i>Hidehiko Kumagai</i>                                                                                                                                   |            |
| <b>5 Microbial Exopolysaccharides</b> .....                                                                                                               | <b>179</b> |
| <i>Avinash Mishra · Bhavanath Jha</i>                                                                                                                     |            |
| <b>6 Bacterial Enzymes</b> .....                                                                                                                          | <b>193</b> |
| <i>Wim J. Quax</i>                                                                                                                                        |            |
| <b>7 Diversity and Biotechnological Applications of Prokaryotic Enzymes</b> .....                                                                         | <b>213</b> |
| <i>Alane Beatriz Vermelho · Eliane Ferreira Noronha · Edivaldo Ximenes Ferreira Filho · Maria Antonieta Ferrara · Elba Pinto S. Bon</i>                   |            |
| <b>8 Bacteria in Food and Beverage Production</b> .....                                                                                                   | <b>241</b> |
| <i>Michael P. Doyle · Larry R. Steenson · Jianghong Meng</i>                                                                                              |            |
| <b>9 Bacterial Pharmaceutical Products</b> .....                                                                                                          | <b>257</b> |
| <i>Giancarlo Lancini · Arnold L. Demain</i>                                                                                                               |            |
| <b>10 Biosurfactants</b> .....                                                                                                                            | <b>281</b> |
| <i>Eugene Rosenberg · Eliora Z. Ron</i>                                                                                                                   |            |
| <b>11 Bioremediation</b> .....                                                                                                                            | <b>295</b> |
| <i>Ronald L. Crawford · Eugene Rosenberg</i>                                                                                                              |            |
| <b>12 Biodeterioration</b> .....                                                                                                                          | <b>309</b> |
| <i>Ji-Dong Gu · Ralph Mitchell</i>                                                                                                                        |            |
| <b>13 Microbial Biofilms</b> .....                                                                                                                        | <b>343</b> |
| <i>Dirk De Beer · Paul Stoodley</i>                                                                                                                       |            |
