

Table of Contents

Session 1

Robust and Scalable Interactive Freeform Modeling of High Definition Medical Images	1
<i>Noura Faraj, Jean-Marc Thiery, Isabelle Bloch, Nadège Varsier, Joe Wiart, and Tamy Boubekeur</i>	
3D Anatomical Shape Atlas Construction Using Mesh Quality Preserved Deformable Models	12
<i>Xinyi Cui, Shaoting Zhang, Yiqiang Zhan, Mingchen Gao, Junzhou Huang, and Dimitris N. Metaxas</i>	

Session 2

Automatic Fracture Reduction	22
<i>Thomas Albrecht and Thomas Vetter</i>	
Age-Related Changes in Vertebral Morphometry by Statistical Shape Analysis	30
<i>Tristan Whitmarsh, Luis M. Del Río Barquero, Silvana Di Gregorio, Jorge Malouf Sierra, Ludovic Humbert, and Alejandro F. Frangi</i>	

Session 3

Automatic Meshing of Femur Cortical Surfaces from Clinical CT Images	40
<i>Ju Zhang, Duane Malcolm, Jacqui Hislop-Jambrich, C. David L. Thomas, and Poul Nielsen</i>	
Statistical Surface Recovery: A Study on Ear Canals	49
<i>Rasmus R. Jensen, Oline V. Olesen, Rasmus R. Paulsen, Mike van der Poel, and Rasmus Larsen</i>	

Session 4

Automated Segmentation of Cerebral Aneurysms Based on Conditional Random Field and Gentle Adaboost	59
<i>Hong Zhang, Yuanfeng Jiao, Yongjie Zhang, and Kenji Shimada</i>	
Carving Mesh with Deformation for Soft Tissue Removal Simulation ...	70
<i>Youngjun Kim, Seunghin Lee, Frédérick Roy, Deukhee Lee, Laehyun Kim, and Sehyung Park</i>	

Poster Session

Synthesis of Realistic Subcortical Anatomy with Known Surface Deformations 80
 Yi Gao and Sylvain Bouix

Robust Shape Correspondence via Spherical Patch Matching for Atlases of Partial Skull Models 89
 Boris A. Gutman, Ryan McComb, Jay Sung, Won Moon, and Paul M. Thompson

Feature-Preserving, Multi-material Mesh Generation Using Hierarchical Oracles 101
 Max Kahnt, Heiko Ramm, Hans Lamecker, and Stefan Zachow

Partition Cortical Surfaces into Supervertices: Method and Application 112
 Gang Li, Jingxin Nie, and Dinggang Shen

Automatic Boundary Evolution Tracking via a Combined Level Set Method and Mesh Warping Technique: Application to Hydrocephalus 122
 Jeonghyung Park, Suzanne M. Shontz, and Corina S. Drapaca

Simplified Reeb Graph as Effective Shape Descriptor for the Striatum 134
 Antonietta Pepe, Laura Brandolini, Marco Piastra, Juha Koikkalainen, Jarmo Hietala, and Jussi Tohka

Topology Aware Quad Dominant Meshing for Vascular Structures 147
 Dominik Sibbing, Hans-Christian Ebke, Kai Ingo Esser, and Leif Kobbelt

Volumetric Real-Time Particle-Based Representation of Large Unstructured Tetrahedral Polygon Meshes 159
 Philip Voglreiter, Markus Steinberger, Dieter Schmalstieg, and Bernhard Kainz

Author Index 169
