Preface	ix
Acknowledgments	xv
About the authors	xvii
List of figures	xix
List of tables	xxv
List of abbreviations and acronyms	xxvii
1 Qualification, species variety, and consequences of harmful algal blooms (HABs)	1
1.1 Introduction	1
1.2 Harmful algal bloom species qualification and variety	3
1.3 Ecological aspects	4
1.4 Food safety, health, and sanitary aspects	9
1.5 Economic aspects	20
1.6 Concluding remarks	24
2 Biology and ecology of harmful algal species	25
2.1 Role of hydrodynamics	26
2.2 Role of biogeochemistry	29
2.3 Role played by other factors	31
2.4 Case studies	32
2.4.1 <i>Chattonella</i> or <i>Pseudochattonella</i> spp. in the North Sea/Skaggerak	32
2.4.2 Cyanobacteria blooms in the Baltic Sea	40
2.4.3 <i>Gymnodinium catenatum</i> blooms in the Galician Rías	43

3	Potential of remote sensing for identification, delineation, and monitoring of harmful algal blooms	49
3.1	Taxonomy and pigment composition of harmful algae	50
3.2	Absorption and emission spectral features of pigments	52
3.3	Inherent optical and apparent properties of natural waters	61
3.4	Optical properties of the major color-producing agents (CPAs) in natural waters	65
3.4.1	Absorption cross-sections of whole algal cells and pigments	65
3.4.2	Backscattering cross-sections of algal cells	68
3.4.3	Fluorescence cross-sections, $\phi_{php}^*(\lambda)$ of algal cells	72
3.4.4	Optical impact of mucilage	72
3.4.5	Absorption and backscattering cross-sections of suspended minerals and dissolved organic matter	73
3.5	Harmful algae detection: methodologies	80
3.5.1	Detection of expressions of pigment composition in harmful algae in absorption and water column reflectance spectra	80
3.5.2	Detection of massive HABs through remote estimation of <i>chl-a</i> concentration/phytoplankton biomass levels	95
3.6	Synergistic approaches for HAB detection and monitoring.	107
3.7	Closing remarks	110
4	Monitoring harmful algal blooms from space	113
4.1	Some case studies of bloom events in the world's oceans.	114
4.1.1	The North and Baltic Seas	116
4.1.2	The Korean Southeast and East China Seas	118
4.1.3	The Pearl River Estuary, China	119
4.1.4	The Yellow Sea/Bohai Sea, China	120
4.1.5	Vietnam coastal waters	121
4.1.6	Moreton Bay, Australia	121
4.1.7	The Gulf of Finland	122
4.1.8	Lake Erie, U.S.A./Canada	124
4.1.9	Norwegian coastal waters	125
4.1.10	Applications of FLH data products for HAB monitoring	170
4.2	Role played by synergies between satellite EO data in HAB monitoring.	177
4.3	Near-real time surveillance of HABs	188
4.3.1	Norwegian HAB-monitoring services	188
4.3.2	British EO Data Acquisition and Analysis Service (NEODAAS)	197
4.3.3	U.S. HAB monitoring system for the Gulf of Mexico	199
4.4	Closing remarks	200

5	Integrated modeling and satellite monitoring of algal blooms	203
5.1	Marine/shelf sea ecosystem modeling: nature, capabilities, and limitations	203
5.1.1	General characterization of marine ecosystem models.	203
5.1.2	Types of marine ecosystem models simulating algal blooms	206
5.2	Global to regional model simulations: specific features	211
5.2.1	General considerations	211
5.2.2	Equatorial Pacific Ocean	218
5.2.3	Subtropical and tropical waters	220
5.2.4	Barcelona Harbor, the Mediterranean Sea	222
5.2.5	European continental shelf waters	225
5.3	Modeling HABs as an element of integrated marine monitoring	236
5.3.1	HAB modeling for the North Sea and Skagerrak waters	237
5.3.2	HAB modeling for the Baltic Sea.	247
5.3.3	HAB modeling in the Galician Rías	255
5.4	Closing remarks	261
	Afterword	263
	References	269
