

Contents

1	Upper Bound Theorem	1
1.1	Basic Assumptions and Equations	2
1.2	Vicinity of the Bi-Material Interface	4
1.3	Effect of Cracks	5
	References	8
2	Plane Strain Solutions for Highly Undermatched Tensile Specimens	11
2.1	Center Cracked Specimen	11
2.2	Crack at Some Distance From the Mid-Plane of the Weld	20
2.3	Arbitrary Crack in the Weld	22
	References	25
3	Plane Strain Solutions for Highly Undermatched Scarf Joint Specimens	27
3.1	Specimen with No Crack	27
3.2	Crack at the Mid-Plane of the Weld	36
3.3	Crack at Some Distance from the Mid-Plane of the Weld	38
3.4	Arbitrary Crack in the Weld	40
	References	44
4	Axisymmetric Solutions for Highly Undermatched Tensile Specimens	45
4.1	Solid Cylinder with No Crack	45
4.2	Crack at the Mid-Plane of the Weld	53
4.3	Crack at Some Distance From the Mid-Plane of the Weld	57
4.4	Hollow Cylinder with No Crack	59
	References	63

5	Plane Strain Solutions for Highly Undermatched Specimens in Bending	65
5.1	Deformation of a Plastic Wedge Between Rotating Plates	65
5.2	Upper Bound Solution I	70
5.3	Upper Bound Solution II	74
	References	80
6	Miscellaneous Topics	81
6.1	Thickness Effect for Highly Undermatched Tensile Specimens	81
6.1.1	Center Cracked Specimen	82
6.1.2	Double Edge Cracked Specimen	91
6.2	Mis-Match Effect	97
6.2.1	Overmatched Center Cracked Specimen	97
6.2.2	Undermatched Center Cracked Specimen	101
6.3	Effect of Plastic Anisotropy	104
6.3.1	Theory of Anisotropic Plasticity	104
6.3.2	Overmatched Center Cracked Specimen	106
6.3.3	Highly Undermatched Center Cracked Specimen	108
	References	115
