Contents

1 Gustav Mie: From Electromagnetic Scattering to an Electromagnetic View of Matter 1
1.1 Introduction 1
1.2 Life and Scientific Career 3
1.2.1 Childhood in Rostock 3
1.2.2 Study in Rostock and Heidelberg (1886–1890) 6
1.2.3 Karlsruhe: Beginning of the Scientific Career (1892–1902) 10
1.2.4 Greifswald: The productive Period (1902–1917) 14
1.2.5 Halle: Intermediate Station (1917–1924) 17
1.2.6 Freiburg: Ordinarius and Retirement in Baden (1924–1957) 20
1.3 Scientific Fields of Activity 22
1.3.1 Transport of Energy and Thermodynamics 24
1.3.2 Electrotechnics and Electrodynamics 25
1.3.3 Scattering Theory 27
1.3.4 Theory of Matter and Theory of Relativity 33
1.4 Gustav Mie as University Teacher 37
1.4.1 Lectures 37
1.4.2 Disciples 39
1.4.3 Textbooks and Popular Scientific Brochures 39
1.5 Scientific Community and Society 41
1.6 Concluding Remarks 43
Publications of Gustav Mie 44
Biographic and Bibliographic Communications about Gustav Mie 47
References 48

2 Mie Theory: A Review 53
2.1 Introduction 53
2.2 Nonspherical Particles 54
2.3 History of Mie's Theory 54
2.4 Mie Algorithms 56
2.5 Spheres in an Absorbing Medium 57
2.6 Coated Spheres 57
2.7 Distorted Spheres 57
2.8 Magnetic Spheres 58
2.9 Chiral and Anisotropic Spheres 58
2.10 Scattering by a Short Pulse 59
2.11 Nanosized Spheres 59
2.12 Gaussian Beam Scattering 60
2.13 Near Fields 61
2.14 Longitudal Modes 61
2.15 Aggregates of Spheres 62
2.16 Parallelisation 62
2.17 Further Topics 63
2.18 Further Reading 63
2.19 Available Programs 64
2.20 Sample Simulation Results 64
2.21 Conclusion 67
References 68

3 From Theories by Lorenz and Mie to Ontological Underdetermination of Theories by Experiments 73
3.1 Introduction 73
3.2 Quine's and Ontological Underdeterminations, with Precursors 75
3.3 Case studies 81
3.3.1 From Classical Mechanics 81
3.3.2 From Quantum Mechanics 82
3.4 An Escape to Underdetermination: Ampliative Arguments 90
3.4.1 Undecidability 90
3.4.2 Ampliative Arguments 91
3.4.3 The Mechanical Rainbow 92
3.4.4 On the Nonsingularity Principle 93
3.4.5 Newtonian Trajectories of Matter Points do not Exist 93
3.4.6 Deciding Between Undecidables 95
Conclusion 96
References 97

4 Predicting the Appearance of Materials Using Lorenz–Mie Theory 101
4.1 Introduction 101
4.2 Realistic Image Synthesis 102
4.2.1 Camera 103
4.2.2 Geometry of Objects 103
4.2.3 Light Sources 104
4.2.4 Light Propagation 104
4.2.5 Light Scattering 105
4.3 Predicting Appearance 111
4.3.1 Computing Optical Properties 112
4.3.2 Lorenz–Mie Theory 115
4.3.3 Number Density Distributions 120
4.3.4 Non-Spherical Particles 121
4.3.5 Scattering of a Gaussian Beam 122
4.4 Milk as a Case Study 122
4.4.1 Particle Composition 123
4.4.2 Appearance Model 126
4.4.3 Results 127
4.5 Conclusion 130
References 131

5 Dipole Re-Radiation Effects in Surface Enhanced Raman Scattering 135
5.1 Introduction 136
5.2 Methods 137
5.2.1 Theory 137
5.2.2 Computational Details 140
5.3 Dipole Re-Radiation Effects in SERS from Isolated Particles and Dimers 141
5.4 Dipole Re-Radiation Effects in SERS from Single Sphere Chains 143
5.5 Dipole Re-Radiation Effects in SERS from Dimer Chains 148
5.6 Conclusions 153
References 154

6 Optical Force and Torque on Single and Aggregated Spheres: The Trapping Issue 157
6.1 Introduction 157
6.2 Radiation Force and Radiation Torque 158
6.2.1 Radiation Force by Plane Waves 160
6.2.2 Radiation Torque by Plane Waves 163
6.2.3 Contributions to Radiation Force and Torque 167

6.3 Radiation Force and Torque on Aggregated Spheres 167
6.3.1 Radiation Pressure on Aggregated Spheres 168
6.3.2 Radiation Torque on Aggregated Spheres 169
6.4 Laser Beams as a Superposition of Plane Waves 172
6.4.1 The Angular Spectrum Representation 173
6.4.2 Far Field in the Angular Spectrum Representation 174
6.5 Radiation Force from a Highly Focalized Laser Beam 175
6.6 Trapping and Manipulation of Single and Aggregated Spheres 178
6.6.1 Trapping of Dielectric Spheres 178
6.6.2 Trapping of Gold Spheres 181
6.7 Radiation Torque on Elongated Nanostructures 186
6.8 Appendix 1 188
6.9 Appendix 2 190
References 191

7 Rainbows, Coronas and Glories 193
7.1 Introduction 193
7.2 Rainbows 197
7.3 Coronas 202
7.4 Glories 206
7.5 Conclusions 219
References 220

8 The Extension of Mie Theory to Multiple Spheres 223
8.1 Introduction 223
8.2. The Multiple Sphere Solution 225
8.2.1 The Superposition Strategy 225
8.2.2 Translated Fields and the Addition Theorem 227
8.2.3 The Interaction Equations 229
8.3 The Addition Theorem 229
8.3.1 Forms of the Addition Theorem 229
8.3.2 Recursive Translations 231
8.3.3 Derivation of the Addition Theorem 232
8.3.4 Application to the Plane Wave Expansion 234
8.3.5 Far-Field Limit of the Translation Matrix 236
8.4 Properties of the Multiple Sphere Solution 236
8.4.1 Numerical Issues 236
8.4.2 The T Matrix Relationships 237
8.4.3 Coordinate Rotation and the Amplitude and Scattering Matrix 239
8.4.4 Cross Sections and Energy Conservation 241
8.4.5 Random Orientation 244

8.4.6 Emission Cross Sections and Inter–Sphere Energy Transfer 245
8.5 Extensions and Future Challenges 248
8.5.1 Application to Inhomogeneous Media 249
8.5.2 Future Applications: Direct Simulations and the Bridge to the RTE 251
8.6 Appendix 252
8.6.1 Calculation of the Translation Matrix Elements 252
8.6.2 The Rotation-Axial Translation Operation 254
8.6.3 Generalized Spherical Functions 255
References 256
