

Contents

1. Introduction	1
I. Graphene	7
2. Introduction to Graphene	9
2.1. Elementary electronic properties	10
2.1.1. Tight-binding approach	10
2.1.2. Dirac fermions	11
2.2. Landau levels	13
3. Wave-Packet Revivals	17
3.1. Zitterbewegung	18
3.2. Model for wave-packet revivals	21
3.2.1. Wave-packet revivals in the center-of-mass motion	22
3.2.2. Revivals in the autocorrelation function	27
3.2.3. Fractional revivals	28
3.3. Effect of impurities	30
3.4. Pump-probe detection	34
3.4.1. Excitation into high Landau levels	35
3.4.2. Four-wave mixing	39
3.5. Summary	45
4. Wave-Packet Transport Theory	47
4.1. Wave-packet propagation	48
4.1.1. Chebychev propagator	51

4.1.2.	Faber propagator	54
4.1.3.	Lanczos propagator	56
4.1.4.	Arnoldi propagator	57
4.2.	Transport	58
4.2.1.	Time-dependent quantum scattering	58
4.2.2.	Asymptotic wave packets	60
4.2.3.	Scattering matrix	64
4.3.	Summary	69
5.	Bloch–Zener Oscillations	71
5.1.	Wave-packet motion in graphene superlattices	72
5.2.	Two-band model for Bloch–Zener oscillations	76
5.3.	Transport in graphene-based superlattices	79
5.4.	Radiation-assisted transport	83
5.5.	Summary	86
II.	Topological Insulators	87
6.	HgTe/CdTe Quantum Wells	89
6.1.	Quantum well band structure	90
6.2.	Edge states	97
6.3.	Spin-orbit interaction	99
6.4.	Absence of backscattering	100
7.	Switching Edge-States in HgTe Constrictions	103
7.1.	Topological edge states	105
7.2.	Switching edge states	108
7.2.1.	Transfer matrix approach without spin-orbit interaction	110
7.2.2.	Transfer matrix approach with spin-orbit interaction	112
7.3.	Disorder effects	114
7.4.	Local gating	116
7.5.	Bloch–Zener oscillations in HgTe nanoribbons	121
7.6.	Summary	124
8.	Weak Localization in HgTe Heterostructures	127
8.1.	Weak Localization	128
8.2.	Weak spin-orbit interaction	131
8.2.1.	Shifted weak localization	135
8.2.2.	Berry phase modifications by remote bands	137
8.3.	Strong spin-orbit interaction	139
8.4.	Summary	142

9. Conclusion and Outlook	145
9.1. Summary	145
9.2. Outlook	148
A. Appendix	151
A.1. Classical propagation and quantization of Landau levels in graphene .	151
A.2. Magnetic field in mixed momentum- and position-space representation	154
A.3. Open boundary conditions	157
A.4. Observables from a wave-packet propagation	160
A.4.1. Correlation and density of states	160
A.4.2. Eigenstates	161
A.4.3. Time-resolved current	161
A.5. Lead wave-packet normalization	164
A.6. Transmission through a p-n junction in a graphene nanoribbon	166
A.7. Kane Hamiltonian for HgTe quantum wells	169
Bibliography	171
List of Publications	187
