Contents

1 Introduction and Motivation **1**
- 1.1 GSM Mobile Phone Localization . . . 1
- 1.2 Localization in Search and Rescue Scenarios . . . 4
- 1.3 Key Inventive Concept . . . 5
- 1.4 Scope of this Work . . . 6

2 Basic System Architecture and Measurement Setup **7**
- 2.1 Time Difference of Arrival Localization Systems . . . 7
  - 2.1.1 Localization Scenario . . . 7
  - 2.1.2 Major Challenges and Requirements . . . 9
  - 2.1.3 Auxiliary System Components . . . 10
- 2.2 Time Difference of Arrival Estimation Scenario . . . 12
  - 2.2.1 Elementary Measurement Setup . . . 12
  - 2.2.2 Generic Radio Channel Model . . . 14

3 GSM Signal Characteristics and Modeling **17**
- 3.1 Physical Layer Structure . . . 17
  - 3.1.1 Modulation . . . 17
  - 3.1.2 Burst Types and Structures . . . 20
  - 3.1.3 Power and Spectral Characteristics . . . 22
  - 3.1.4 Multiple Access and Duplexing . . . 24
- 3.2 Modeling of GSM Signals . . . 29
  - 3.2.1 Single Burst Signal Model . . . 29
  - 3.2.2 Frequency Hopping Signal Model . . . 30

4 Coherent Wideband Signal Acquisition and Modeling **31**
- 4.1 Wideband Signal Acquisition Techniques . . . 31
  - 4.1.1 Wideband Frontend Signal Acquisition . . . 31
  - 4.1.2 Narrowband Frontend Signal Acquisition . . . 33
  - 4.1.3 Mixed Acquisition Schemes . . . 35
  - 4.1.4 Coherence and Phase Relationships . . . 36
- 4.2 Properties of Acquired Wideband Signals . . . 37
  - 4.2.1 Frequency Hopping Bandwidth . . . 37
  - 4.2.2 Effective Signal Bandwidth . . . 37
  - 4.2.3 Signal to Noise Ratio . . . 38

Bibliografische Informationen
http://d-nb.info/1033662798

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.3 Pre-Processing and Multiple Source Separation 40
4.3.1 Burst Isolation Technique 40
4.3.2 Wideband Signal Reconstruction Technique 43
4.3.3 Multiple Source Separation Technique 44

5 Coherent Time Difference of Arrival Estimation Techniques 45
5.1 Wideband Crosscorrelation Technique 45
5.1.1 Definition of the Crosscorrelation Function 45
5.1.2 Decomposition of the Crosscorrelation Function 46
5.1.3 Ambiguity Function of Frequency Hopping Signals 47
5.1.4 Shape of the Ambiguity Function 48
5.1.5 Properties of the Ambiguity Function 56
5.1.6 Application of Concatenated and Stacked Signals 60
5.1.7 Range Limitations 64
5.2 Burst Phase Analysis Technique 66
5.2.1 Derivation for Simple Delay Scenarios 66
5.2.2 Evaluation of Multiple Burst Signals 68
5.2.3 Influence of Multipath Components 71
5.2.4 Averaging of Burst Phase Differences 77
5.2.5 Range Ambiguities 80
5.3 Realizable Frequency Hopping Signal Configurations 81

6 Numerical Performance Simulation and Evaluation 83
6.1 Simulation Environment and Parameters 83
6.2 Noise Performance in Multipath-Free Scenarios 86
6.2.1 AWGN Channel Model 86
6.2.2 Cramér-Rao Lower Bound 86
6.2.3 Estimation Standard Deviation 87
6.3 Multipath Performance in Two-Paths Scenarios 92
6.3.1 Two-Path Channel Model 92
6.3.2 Maximum Estimation Bias 92
6.4 Multipath Performance in Realistic Scenarios 96
6.4.1 Tapped Delay-Line Channel Model 96
6.4.2 Resolvability of Propagation Paths 100
6.5 Summary of Estimation Technique Performance 104

7 Prototype System Structure and Measurement Results 105
7.1 Structure of the Receiving Stations 105
7.1.1 Main Functional Components 105
7.1.2 Synchronization Source Module 106
7.1.3 Synchronization and Trigger Module 107
7.1.4 Wideband Signal Acquisition Module 109
7.1.5 Data and Control Module 111
7.1.6 Integration of the Modules 112

7.2 Characteristics of Hardware Modules . . . 113
7.2.1 Phase Noise Profile of Synchronization Signals . . . 113
7.2.2 Synchronicity of Synchronization Source Signals . . . 114
7.2.3 Synchronicity of Synchronization and Trigger Signals . . . 116
7.2.4 Frequency Response of Wideband Signal Acquisition Modules . . 118
7.2.5 Symmetry of Wideband Signal Acquisition Modules . . . 120
7.3 Time Difference of Arrival Measurement Results . . . 122
7.3.1 Static Offset Compensation Procedure . . . 122
7.3.2 Measurement Setup and Evaluation Procedure . . . 123
7.3.3 Originating GSM Signal Configuration . . . 126
7.3.4 Delay-Line Measurement Results . . . 126
7.4 Summary of Hardware and Measurement Results . . . 130

8 Summary and Outlook 133
8.1 Major Achievements and Contributions . . . 133
8.2 Future Work and Development . . . 134
8.3 Patents, Scientific Publications and Theses . . . 137

Appendices 139

A Frequency Hopping Sequence Generation in GSM Systems 141

B Logical and Physical Channels in GSM Systems 143
B.1 Definition of Resources and Channels . . . 143
B.2 Structure of the 26-Multiframe . . . 143
B.3 Structure of the 51-Multiframe . . . 144

C Frequency Hopping Signal Transmission Initiation in GSM Systems 147
C.1 Requirements for Signal Transmission Initiation . . . 147
C.2 Voice and Data Connection . . . 147
C.3 Modified Handover Procedure . . . 150

D Time Difference of Arrival Estimation for Narrowband GSM Signals 153
D.1 Narrowband Crosscorrelation Technique . . . 153
D.2 Model-based Estimation Techniques . . . 155
D.3 Incoherent Integration with Multipath Rejection Technique . . . 156
D.4 Successive Cancellation Technique . . . 158
D.5 Further Applicable Techniques . . . 159
D.6 Comparative Summary . . . 162

E Localization System Architecture for Search and Rescue Scenarios 163
