Preface	vii
1 Dirichlet forms	1
1.1 Semi-Dirichlet forms and resolvents	1
1.2 Closability and regular Dirichlet forms	9
1.3 Transience and recurrence of Dirichlet forms	12
1.4 An auxiliary bilinear form	20
1.5 Examples	30
1.5.1 Diffusion case	30
1.5.2 Jump type case	36
2 Some analytic properties of Dirichlet forms	43
2.1 Capacity	43
2.2 Quasi-Continuity	51
2.3 Potential of measures	55
2.4 An orthogonal decomposition of the Dirichlet forms	60
3 Markov processes	72
3.1 Hunt processes	72
3.2 Excessive functions and negligible sets	76
3.3 Hunt processes associated with a regular Dirichlet form	80
3.4 Negligible sets for Hunt processes	89
3.5 Decompositions of Dirichlet forms	94
4 Additive functionals and smooth measures	112
4.1 Positive continuous additive functionals	112
4.2 Dual PCAFs and duality relations	128
4.3 Time changes and killings	138
5 Martingale AFs and AFs of zero energy	149
5.1 Fukushima's decomposition of AFs	149
5.1.1 AFs generated by functions of \mathcal{F}	151

5.1.2	Martingale additive functionals of finite energy	152
5.1.3	CAFs of zero energy	154
5.2	Beurling–Deny type decomposition	169
5.3	CAFs of locally zero energy in the weak sense	179
5.4	Martingale AFs of strongly local Dirichlet forms	190
5.5	Transformations by multiplicative functionals	203
5.6	Conservativeness and recurrence of Dirichlet forms	208
6	Time dependent Dirichlet forms	215
6.1	Time dependent Dirichlet forms and associated resolvents	215
6.2	A parabolic potential theory	224
6.3	Associated space-time processes	239
6.4	Additive functionals and associated measures	248
6.5	Some stochastic calculus	259
	Notes	267
	Bibliography	272
	Index	283
