

Contents

1	Introduction	1
1.1	Outline.....	1
1.2	The notion of analog computing	2
1.3	Direct and indirect analogies	3
2	Mechanical analog computers	5
2.1	Astrolabes.....	5
2.2	The Antikythera mechanism	5
2.3	Slide rules.....	6
2.4	Planimeters	8
2.5	Mechanical computing elements	11
2.5.1	Function generation.....	12
2.5.2	Differential gears.....	14
2.5.3	Integrators	14
2.5.4	Multipliers	17
2.6	Harmonic synthesizers and analyzers	18
2.7	Mechanical fire control systems	21
2.8	Differential analyzers	23
3	The first electronic analog computers	31
3.1	HELMUT HOELZER	31
3.1.1	The "Mischgerät"	32
3.1.2	HOELZER's analog computer	38
3.2	GEORGE A. PHILBRICK's Polyphemus	44
3.3	Electronic fire control systems	47
3.4	MIT	53
4	Basic computing elements	55
4.1	Operational amplifiers	55
4.1.1	Early operational amplifiers	59

4.1.2	Drift stabilization	61
4.2	Summers	64
4.3	Integrators	67
4.4	Coefficient potentiometers	70
4.5	Function generators	73
4.5.1	Servo function generators	74
4.5.2	Curve followers	75
4.5.3	Photoformers	76
4.5.4	Varistor function generators	76
4.5.5	Diode function generators	77
4.5.6	Inverse functions.....	79
4.5.7	Functions of two variables	79
4.6	Multiplication.....	80
4.6.1	Servo multipliers.....	80
4.6.2	Crossed-fields electron-beam multiplier	80
4.6.3	Hyperbolic field multiplier	81
4.6.4	Time division multipliers	83
4.6.5	Logarithmic multipliers.....	83
4.6.6	Quarter square multipliers.....	84
4.6.7	Other multiplication schemes	85
4.7	Division and square root	85
4.8	Comparators	85
4.9	Limiters	87
4.10	Resolvers	87
4.11	Time delay	88
4.12	Random noise generators	90
4.13	Output devices.....	90
5	Analog computer anatomy	93
5.1	Analog patch panel	93
5.2	Function generators	95
5.3	Digital patch panel and controls	96
5.4	Readout	97
5.5	Control	98
5.6	Performing a computation	100

6	Typical systems	101
6.1	Telefunken RA 1	101
6.2	EAI 231R.....	103
6.3	Early transistorized systems	106
6.4	Late analog computers	110
7	Programming	113
7.1	Basic approach	113
7.2	KELVIN's feedback technique	115
7.3	Substitution method	117
7.4	Partial differential equations	119
7.4.1	Quotient of differences	119
7.4.2	Separation of variables	121
7.5	Scaling	123
8	Programming examples	125
8.1	$y = a \sin(\omega t + \varphi)$	125
8.2	Sweep generator	127
8.3	Mass-spring-damper system	128
8.4	Predator and prey	131
8.5	Bouncing ball	133
8.6	Car suspension	137
8.7	LORENZ attractor	143
8.8	Projection of rotating bodies	144
8.9	Conformal mapping	147
9	Hybrid computers	151
9.1	Systems	151
9.2	Programming	154
10	Digital differential analyzers	157
10.1	Basic computing elements	158
10.1.1	Integrators	158
10.1.2	Servos	160
10.1.3	Summers	161
10.1.4	Additional elements	162

10.2	Programming examples	162
10.3	Problems	163
10.4	Systems	164
10.4.1	MADDIDA	164
10.4.2	Bendix D-12	165
10.4.3	TRICE	169
11	Applications	173
11.1	Mathematics	173
11.1.1	Differential equations	173
11.1.2	Integral equations	174
11.1.3	Zeros of polynomials	175
11.1.4	Orthogonal functions	176
11.1.5	Linear algebra	176
11.1.6	Eigenvalues and -vectors	177
11.1.7	FOURIER synthesis and analysis	178
11.1.8	Random processes and Monte-Carlo simulations	179
11.1.9	Optimization	179
11.1.10	Multidimensional shapes	180
11.2	Physics	181
11.2.1	Orbit calculation	181
11.2.2	Particle trajectories	181
11.2.3	Optics	183
11.2.4	Heat-transfer	184
11.2.5	Semiconductor research	186
11.2.6	Ferromagnetic films	186
11.3	Chemistry	187
11.3.1	Reaction kinetics	187
11.3.2	Quantum chemistry	188
11.4	Mechanics and engineering	189
11.4.1	Vibrations	189
11.4.2	Shock absorbers	189
11.4.3	Earthquake simulation	190
11.4.4	Rotating systems	191
11.4.5	Bearings	191
11.4.6	Compressors	192
11.4.7	Crank mechanisms	192
11.5	Materials science	192
11.5.1	Non destructive testing	192
11.5.2	Ductile deformation	192
11.5.3	Pneumatic and hydraulic systems	193
11.5.4	Control of machine tools	195
11.5.5	Servo systems	196

11.6	Nuclear technology	196
11.6.1	Research	196
11.6.2	Training	198
11.6.3	Control	199
11.7	Biology and medicine	199
11.7.1	Ecosystems	199
11.7.2	Metabolism research	200
11.7.3	Cardiovascular systems	200
11.7.4	Closed loop control studies	200
11.7.5	Neurophysiology	201
11.7.6	Epidemiology	202
11.7.7	Aerospace medicine	203
11.7.8	Locomotor systems	203
11.7.9	Dosimetry	203
11.8	Geology and marine science	203
11.8.1	Resources	203
11.8.2	Seismology	204
11.8.3	Ray tracing	205
11.9	Economics	205
11.10	Power engineering	207
11.10.1	Generators	207
11.10.2	Transformers	207
11.10.3	Power inverters and rectifiers	207
11.10.4	Transmission lines	208
11.10.5	Power grid simulation	208
11.10.6	Frequency control	210
11.10.7	Dispatch computers	211
11.11	Electronics and telecommunication	211
11.11.1	Circuit simulation	212
11.11.2	Frequency response	213
11.11.3	Filter design	214
11.11.4	Modulators and demodulators	214
11.12	Automation	214
11.12.1	Data processing	215
11.12.2	Correlation analysis	215
11.12.3	Closed loop control and servo systems	215
11.12.4	Sampling systems	216
11.12.5	Embedded systems	216
11.13	Process engineering	217
11.13.1	Mixing tanks, heat exchangers, evaporators and distillation columns	217
11.13.2	Adaptive control	219
11.13.3	Parameter determination and optimization	219

11.14	Transport systems	220
11.14.1	Automotive engineering	220
11.14.1.1	Steering systems	220
11.14.1.2	Transmissions	220
11.14.1.3	Traffic flow simulation	221
11.14.2	Railway vehicles	223
11.14.3	Hovercrafts and Maglevs	223
11.14.4	Nautics	223
11.14.4.1	Dynamic behavior	223
11.14.4.2	Propulsion systems	224
11.14.4.3	Ship simulation	224
11.14.4.4	Torpedo simulation	224
11.15	Aeronautical engineering	225
11.15.1	Landing gears	225
11.15.2	Aircraft arresting gear systems	226
11.15.3	Jet engines	226
11.15.4	Helicopter rotor blades	226
11.15.5	Flight simulation	227
11.15.6	Airborne simulators	234
11.15.7	Guidance and control	235
11.15.8	Miscellaneous	237
11.16	Rocketry	237
11.16.1	Rocket motor simulation	237
11.16.2	Rocket simulation	238
11.16.3	Space craft maneuvers	240
11.16.4	Mercury, Gemini, and Apollo	241
11.17	Military applications	242
11.18	Education	243
11.19	Arts, entertainment and music	243
11.19.1	Arts	243
11.19.2	Entertainment	244
11.19.3	Music	246
11.20	Analog computer centers	247
12	Future and chances	249
